

Introduction to the four elements of the technical guidelines

**ELEMENT A:
LAY THE GROUNDWORK
AND ADDRESS GAPS**

Element A: Lay the groundwork and address gaps

Defining the national mandate

- ✓ An **act, directive, executive order, or policy** issued by the national government to guide action on adaptation;
- ✓ Establishes clear **responsibilities** for government agencies (*lead agency, coordination, reporting, etc.*) and all other stakeholders;
- ✓ Specifies key **actions, milestones** and **outputs** (e.g. assessments, plans, implementation, M&E), *frequency, and follow-up actions*.

Some important considerations

- ✓ Creating a national mandate could take a long time, thus other activities may be initiated to lay the groundwork;
- ✓ Other countries may already have policies on climate change or adaptation that could effectively drive the NAP process, in which case no new mandate is needed.

Take stock of and synthesize:

Available climate analyses	Available vulnerability and climate impact analyses	Past and ongoing adaptation activities	Gaps and barriers for adaptation planning and implementation
<ul style="list-style-type: none">• Current climate• Future climate scenarios	<ul style="list-style-type: none">• National or local• Sector-specific	<ul style="list-style-type: none">• Policies• Programmes• Projects• Capacity-building activities	<ul style="list-style-type: none">• Strengths and weaknesses regarding capacity, data, information, and resources• Barriers for planning and implementation

- How have these analyses and activities been developed?
- What support and funding has been received?
- What have been the timelines involved?
- What kind of data and information has been collected?
- What kind of arrangements and capacities have they produced?
- What was their overall effectiveness?

The outcome of the stocktaking will provide an indication of the status of the country's enabling environment for adaptation and could help to identify key contributors for the NAP process

An important component of the process is to identify aspects of current development efforts that are most at risk from climate change, and to climate-proof those aspects. Potential activities include:

- Reviewing development needs, objectives and investments in the light of potential [climate change risks](#) and/or [opportunities](#) including [synergies](#) and [co-benefits](#)
- Considering how to [adjust certain development objectives](#) taking into account climate change risks and vulnerabilities
- Engaging [stakeholders](#) of all levels of planning in the NAP process and develop an understanding of adaptation requirements

Types of planning processes and development plans may include:

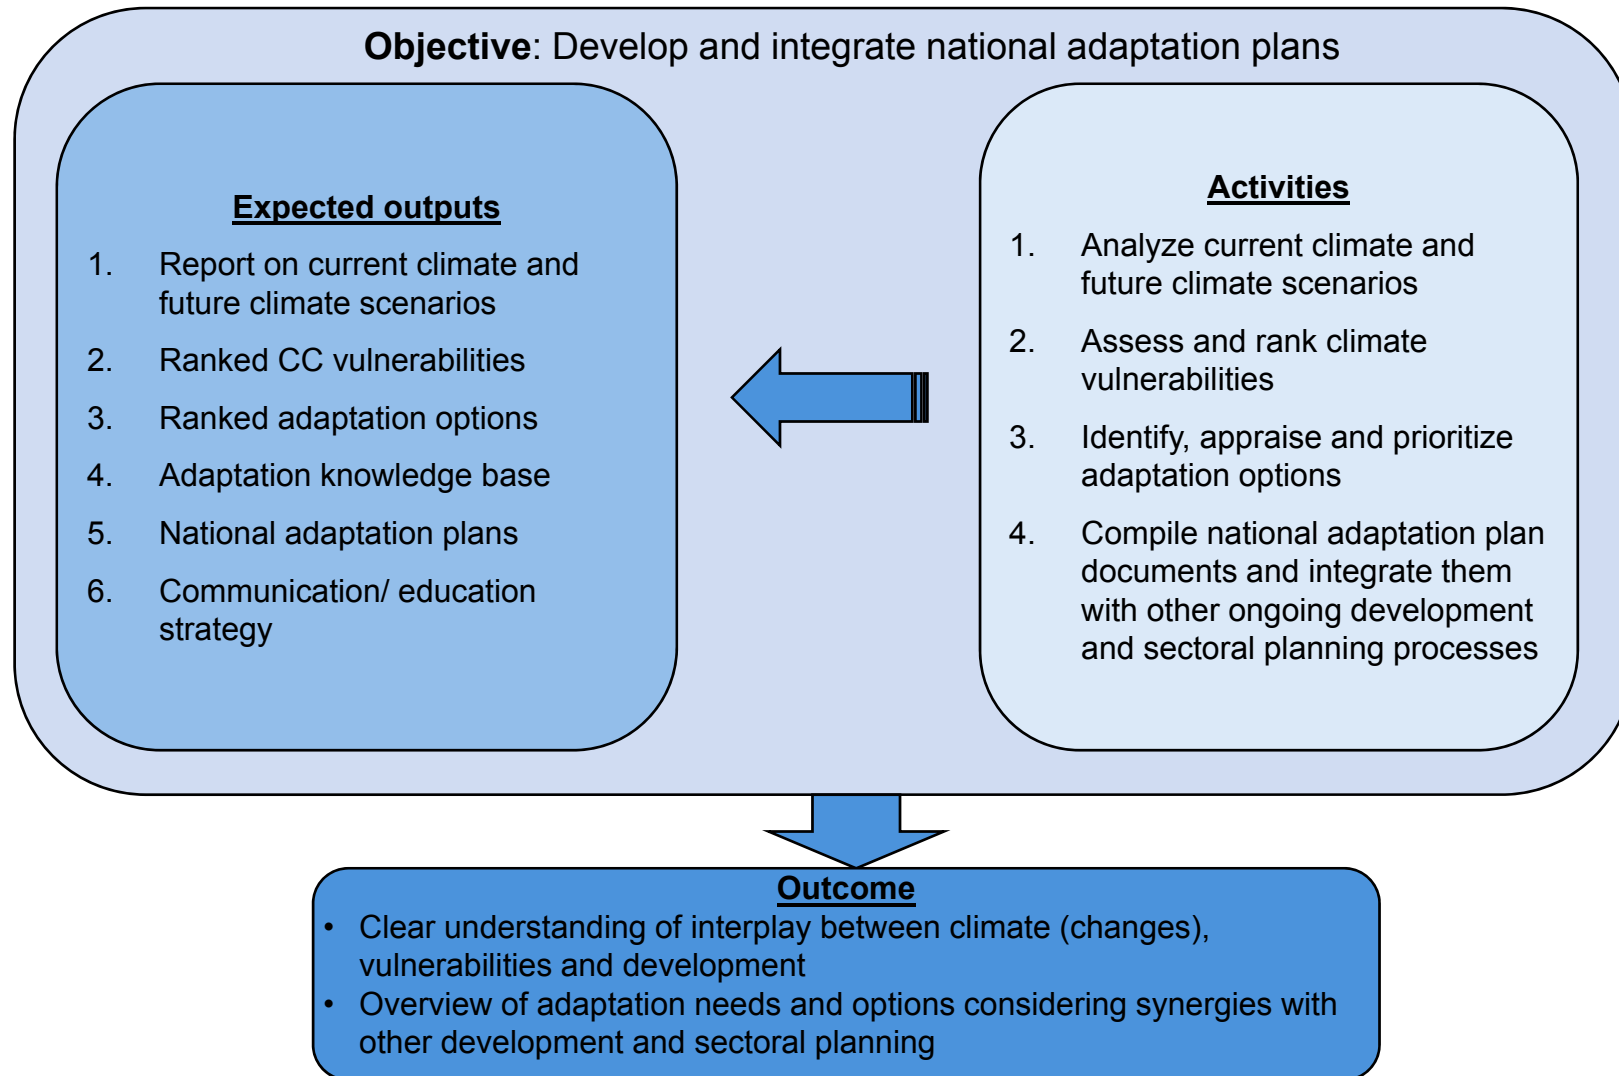

- National development and/or economic strategies
- National policies on governance and local government
- National sectoral policies
- Disaster preparedness and risk reduction frameworks, policies and plans
([elaborated list in chapter A.4.A of the technical guidelines](#))

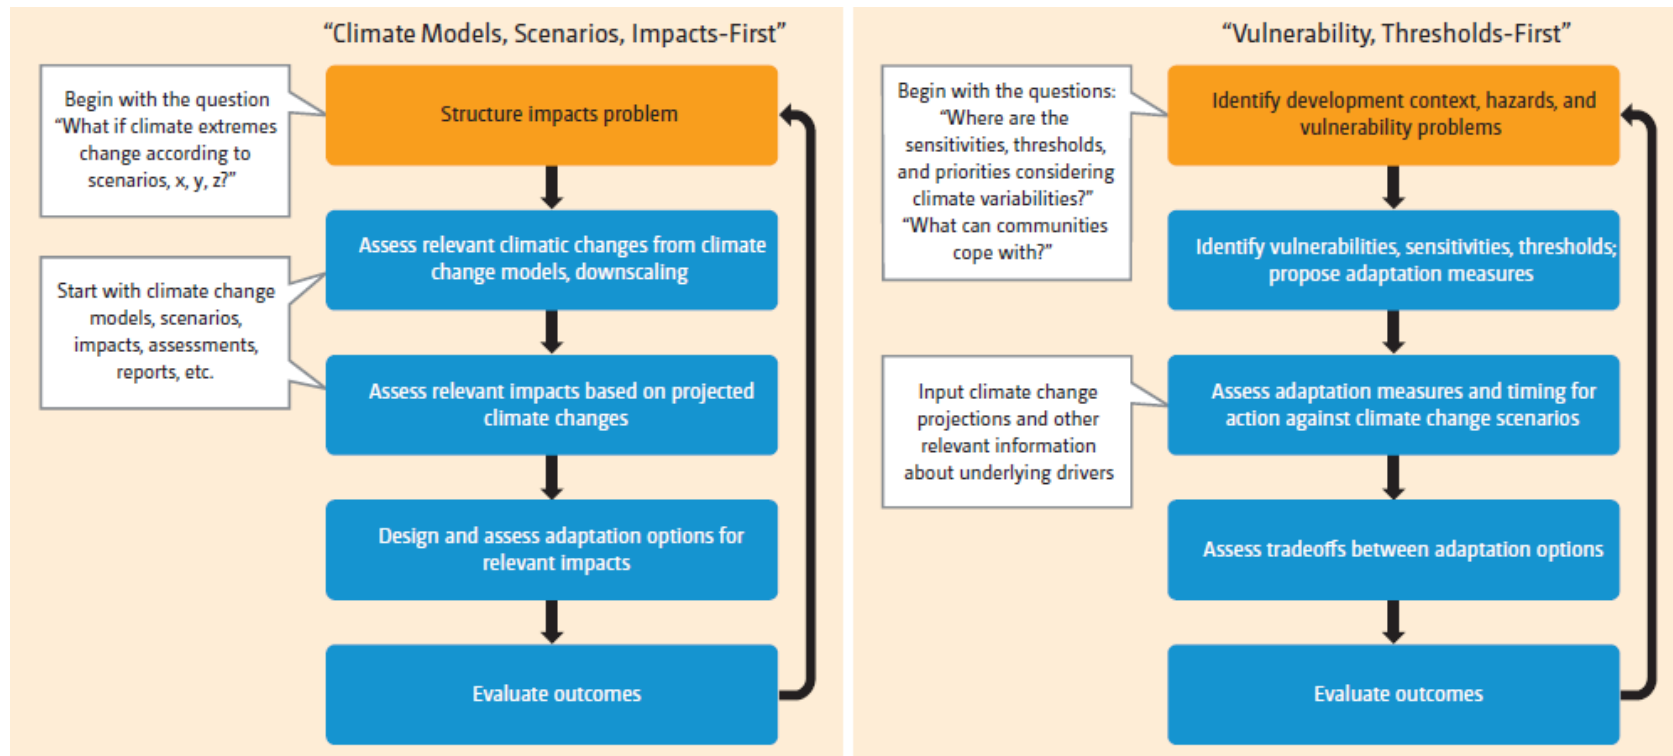

**ELEMENT B:
PREPARATORY ELEMENTS**

Element B: Preparatory elements

Chose the approach for the assessment, e.g. impacts first or vulnerability first:¹

¹Source: Lal PN et al. National systems for managing the risks from climate extremes and disasters. In: IPCC Special Report on Managing the Risks of Extreme Events and Disasters to Advance Climate Change Adaptation. 2012.

Approaches for assessing vulnerability will vary depending on such factors as:

- Major climate hazards and risks for the country
- Focus level identified in the framework and strategy for the NAP process (whether to take a national assessment approach, or whether to address issues by sector or other subnational levels)
- The nature of existing knowledge on impacts, vulnerabilities and risks

A country will likely apply several vulnerability assessment approaches, including:

- *Hazards approach* – where hazards are closely linked to disaster risk management
- *Risk management approach* – taking into account measures to reduce risk
- *Vulnerability approach* - emphasis on interactions between climate and society
- *Resilience approach* – readjustment and flexibility in response to changing conditions
- *Ecosystem-based approaches for adaptation* - focus on adaptation activities that rely on goods and services provided by ecosystems
- *Expert-based approach* - focus on the ranking and prioritization of adaptation options through a qualitative assessment

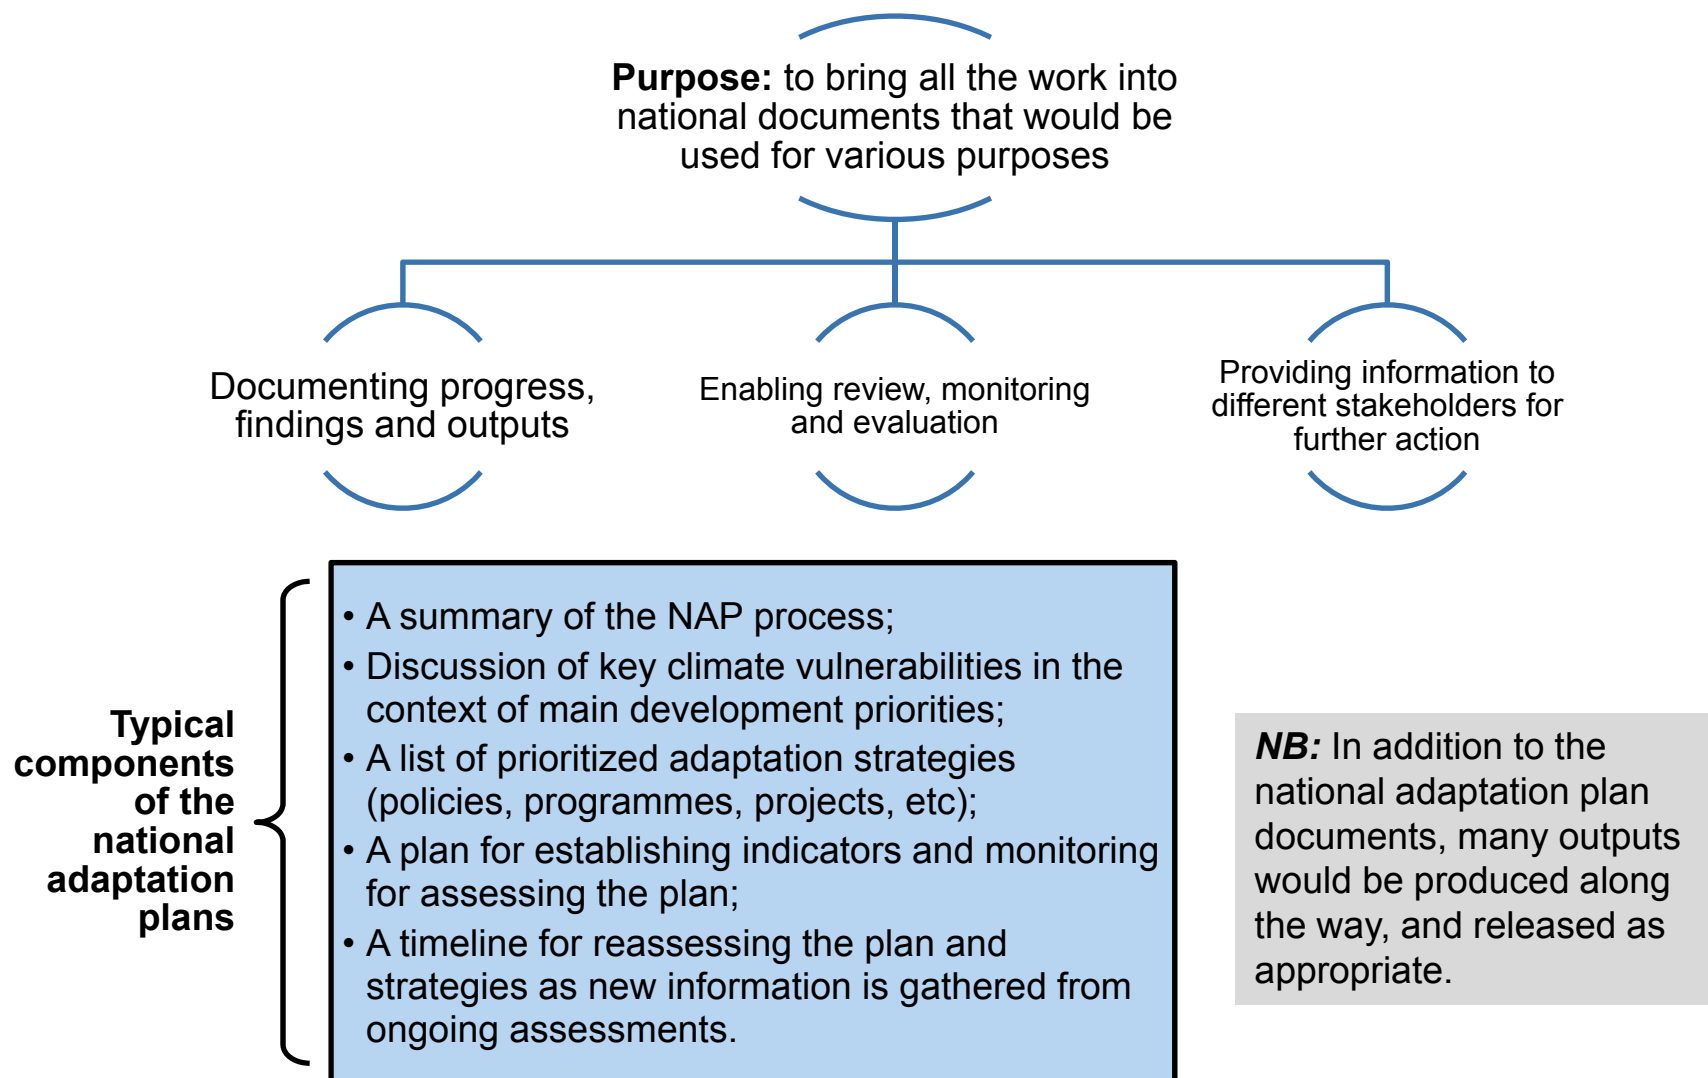

Typical ranking methods

- Consultative processes e.g. group perceptions/questionnaires method
- Nominal group method
- Criteria weighting e.g. Multiple Criteria Analysis, Cost-effectiveness analysis

Common criteria for ranking climate risks include:

- Nature of impacts (loss of life, diseases, constraints to economic development, etc.)
- Order of magnitude of the potential climate change impact
- Probability, likelihood and level of confidence
- Reversibility
- Urgency of action
- Policy relevance
- Connectivity or cross-cutting risks across sectors or regions
- Importance of systems at risk on national development
- Biophysical sensitivity to the effects of climate change

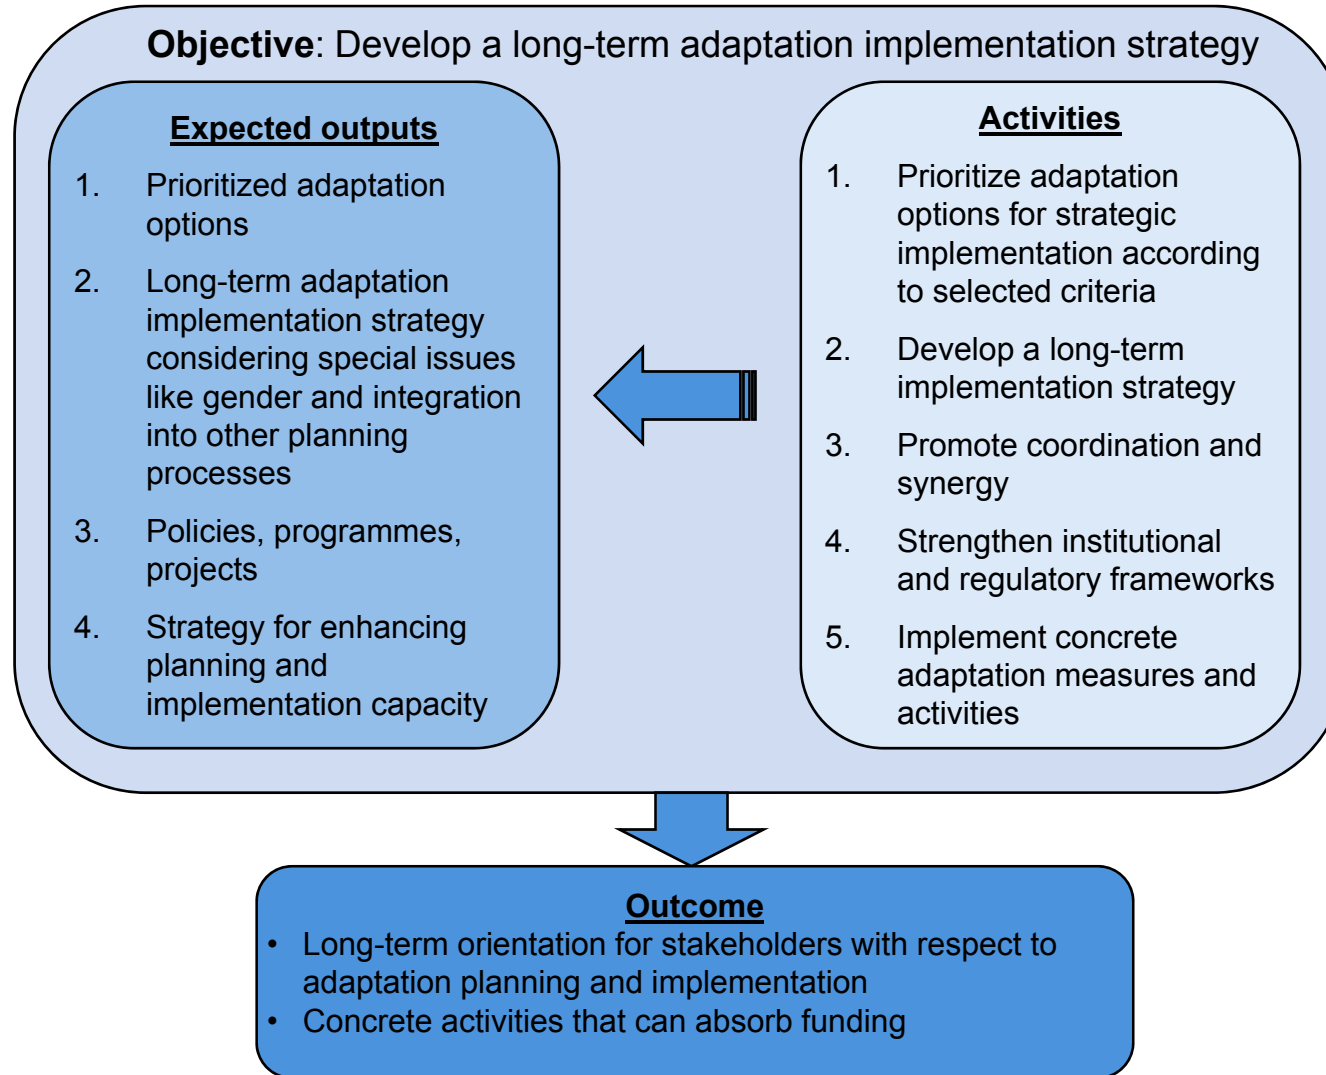

**ELEMENT C:
IMPLEMENTATION STRATEGIES**

Element C: Implementation strategies

Elements of an implementation plan/strategy	
Adaptation activities	<ul style="list-style-type: none"> • To address key vulnerabilities and risks
Prioritization	<ul style="list-style-type: none"> • Of adaptation activities at the national level • Overarching strategy for prioritizing vulnerable communities
Approach for implementation	<ul style="list-style-type: none"> • Project-by-project basis • Sector-wide or programmatic approach • Resilience, climate proofing, ecosystem based, etc.
Support	<ul style="list-style-type: none"> • Funding, technology, capacity-building • Sources of funding • Options for mobilization of support
Overall coordination	<ul style="list-style-type: none"> • For the implementation of the plan
Synergies	<ul style="list-style-type: none"> • With other national plans • At the regional level • With other MEAs
Timing and sequencing of activities	<ul style="list-style-type: none"> • Taking into account available resources, ongoing and planned adaptation, relevant development initiatives
Plus, for each activity	<ul style="list-style-type: none"> • Objectives, outputs, expected outcomes • Target areas or beneficiaries • Resources required for implementation • Responsible organization(s) and/or agency(ies)

An important component of the NAP process is addressing adaptation through various **policies, projects and programmes** depending on the challenges, needs and gaps. Such policies, projects and programmes will vary in form and character across scales, and will depend on prevailing circumstances.

Goals that policies, programmes and projects would seek to pursue:

- ✓ Attainment and safeguarding of food security;
- ✓ Attainment and safeguarding of water security and sanitation;
- ✓ Protection of life and property;
- ✓ Protection and enhancement of ecosystems;
- ✓ Support and enhancement of human health and safety;
- ✓ Climate proofing major components of the economy;
- ✓ Protection and preservation of cultural values and systems.

How to integrate gender considerations into the NAP process?

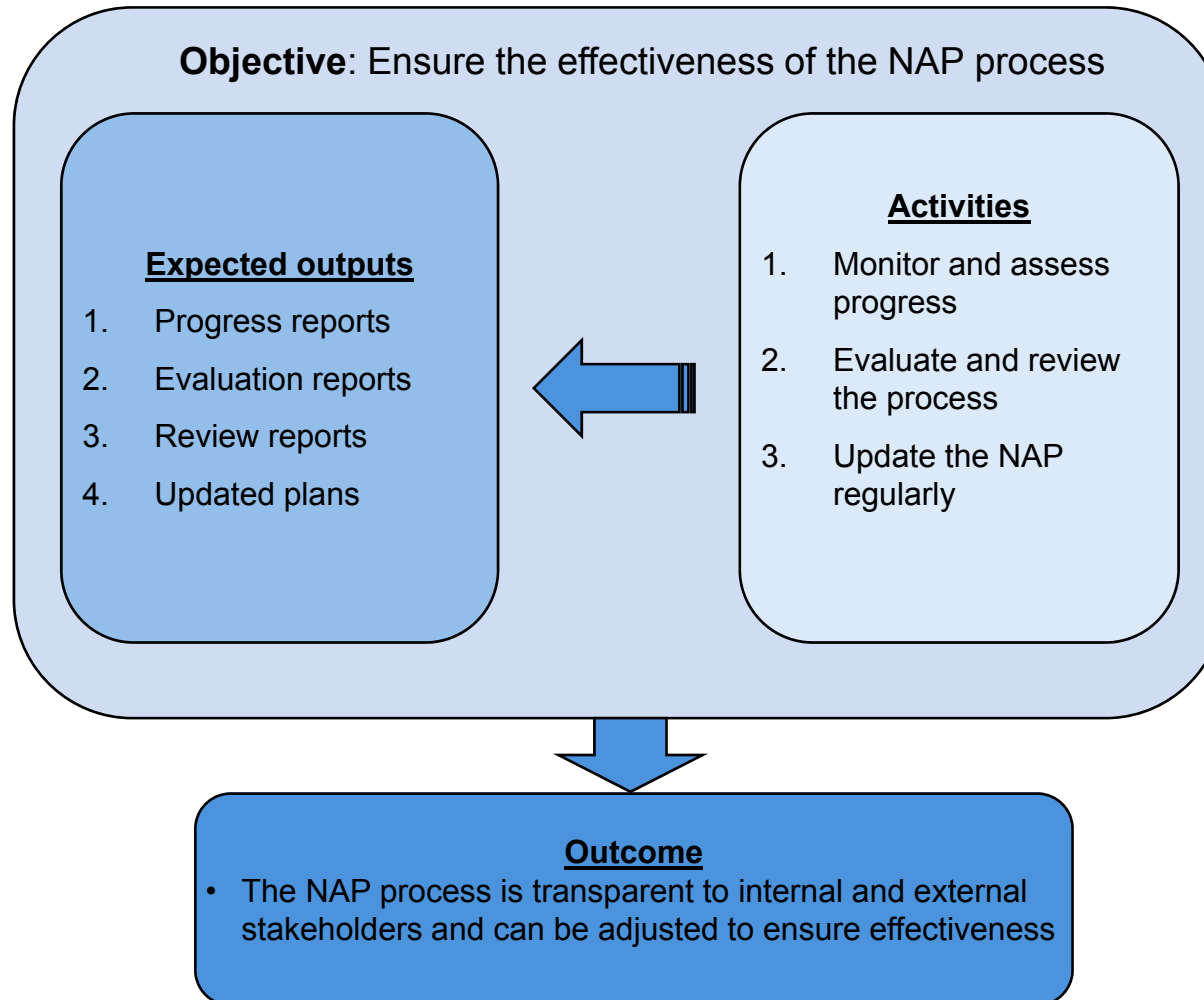

- Assess available **information** on vulnerable groups including women
- Harness the potential of women as **agents of change** within their communities
- Tailor NAP activities based on an understanding of **gender dynamics**
- Ensure the participation of the **most vulnerable groups**, including women, in the NAP process
- Undertake **awareness raising** so that stakeholders understand the gender dynamics
- Use **sex-disaggregated data** in vulnerability and adaptation assessments
- **Monitor and report** on the integration of gender considerations into the NAP process
- Evaluate the **integration** of these considerations into the NAP process, revise if necessary

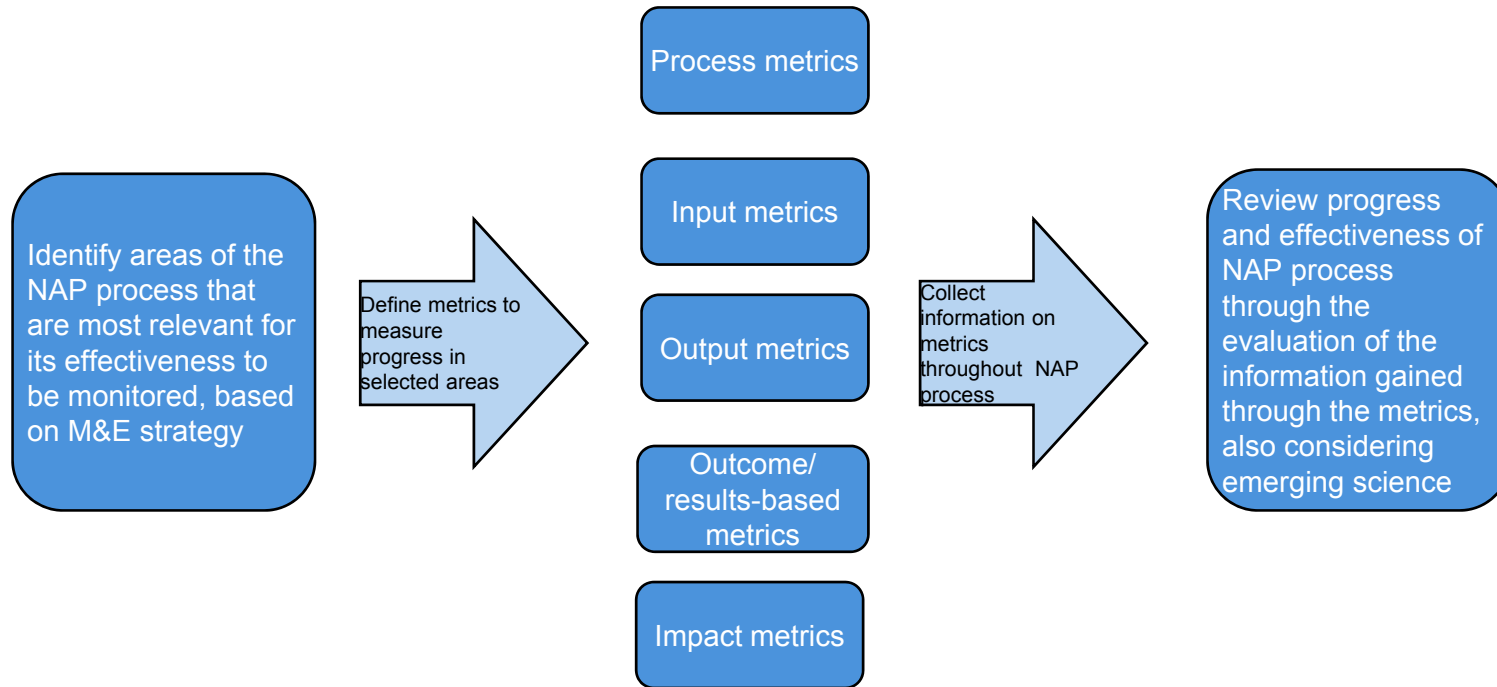

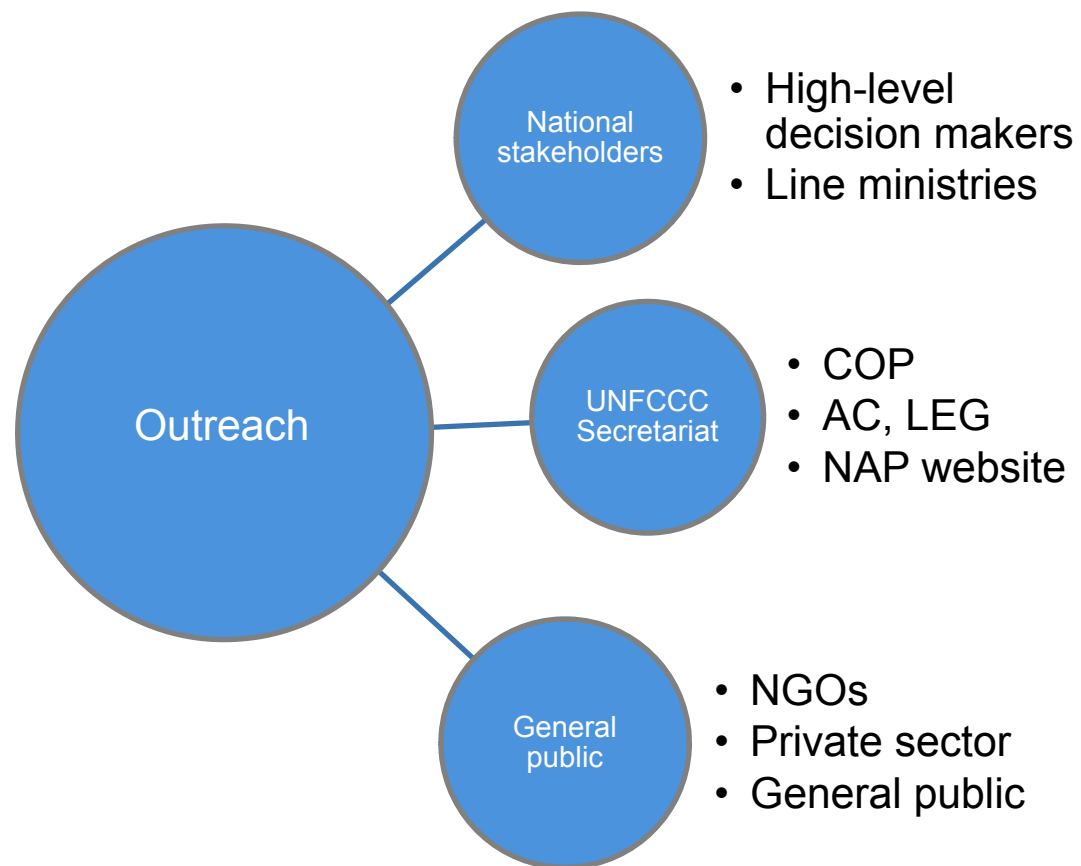

ELEMENT D:
REPORTING, MONITORING AND REVIEW

Element D: Reporting, monitoring and review

LEG's recommendations on next steps

What does it mean to have embarked on the NAP process?

- a) Declaring a coordinating or spearheading mechanism for the NAP process
 - b) Scoping of required activities to **drive the NAP process** (mandates, institutions, relevant stakeholders, resources), recognizing **ongoing NAP-relevant activities**
 - c) Clustering the NAP process into **workstreams** with respective leadership
 - d) Arrangements for **support**
 - e) Compilation and communication of a **roadmap** or strategy, including milestones, for the initial phase of the national process
- Through a submission or other means of communication a country could **communicate the initiation of its NAP process** and provide contact details for partners that are interested in supporting the process

Resources

- The NAP Central – a common information system for the NAP process available at <http://unfccc.int/NAP>

The screenshot displays the NAP Central website. At the top left is the UNFCCC logo and the text "NAP Central". To the right is a search bar with a magnifying glass icon and a "Browse the database" button. Below the header is a navigation menu with dropdown arrows for: Adaptation Overview, Guidelines, Hazards, Sectors, Countries, Tools, Support, Portals, and Links. The main content area is divided into several sections:

- Guidelines:** A circular diagram with four nodes labeled A, B, C, and D connected by arrows.
- Country Information:** A map of West and Central Africa with country names labeled, including Senegal, Gambia, Guinea-Bissau, Guinea, Sierra Leone, Liberia, Burkina Faso, Togo, Ivory Coast, Rep. of the Congo, Angola, Senegal, Gambia, Guinea, Sierra Leone, Liberia, Burkina Faso, Togo, Ivory Coast, Rep. of the Congo, Angola, Malawi, Mozambique, Ethiopia, Eritrea, Djibouti, Central African Rep., Somalia, Nigeria, United Rep. of Tanzania, Rwanda, Burundi, Madagascar, and Mozambique.
- Hazards:** Three images representing "Drought/aridity", "Floods", and "Storms".
- Sectors:** Three images representing "Agriculture & Food Security", "Water Resources", and "Coastal Zones".
- Data, Method and Tools:** A map icon and a list: "+ Data", "+ Methods", "+ Tools".
- Case Studies:** A central "Case studies" node connected to four smaller circular nodes.
- Global Support Programme:** An icon of a globe with arrows pointing to it from several human figures.
- Portals:** A list of links: "+ Country adaptation priorities", "+ Adaptation projects database", "+ Best practices and lessons learned", "+ Data and tool archive", "+ NAP Outputs", "+ Synthesis of available science", "+ NAP Exchange".

A large central image shows a palm tree with the text: "The technical guidelines for the NAP process. The technical guidelines for the NAP process are designed to support countries in their planning and implementation of adaptation at the national level."
