

Second Update of ORA's Action Pledge - May 2009

The Office of Agricultural Risk 2009 has incorporated this new information to alert producers of Argentina in order to adapt to extreme events:

- A system for monitoring water reserves in soil for crops of Argentina
- We have also introduced a system of weekly monitoring of minimum and maximum temperatures, rainfall and average temperature anomalies.
- Another innovation is the state and ENSO forecasting.

All information is on our website <http://www.ora.gov.ar/>
