

Avenues used to disseminate climate change information

Presented by:

Ms. Carol-Faye George, Environment Education and Information Officer, Antigua and Barbuda.

The presentation showcased the various avenues and instruments used in Antigua and Barbuda to sensitise the public and engage all stakeholders to reduce greenhouse gases emission, protect what we have for present and futuristic use, and prepare for adaptation.

These include: formal education, with environmental concepts infused into the local curriculum; informal education, with the Environment Cadet Programme; media training and seminars; Environment Division's web site; resource centre; international cooperation, in particular with the CARICOM MAAC project; showing of climate change documentaries; and public consultations.
