

SB 46
Side-Event
Methodologies for assessing impacts of mitigation actions

Provisional Agenda

Time and Date: 13:15 - 14:45, Tuesday, 16 May 2017

Location: Bonn

Venue: Room Berlin 112 of WCCB

Background and objectives

Paris Agreement paves a way for moving global economy towards a low-carbon transition. In such transformative process, self-determined and increasingly ambitious mitigation actions will have vast impacts on global economy. A good understanding of the impacts of mitigation actions will be crucial to ensure that those actions contributes to, rather than undermines, sustainable development and economic transformation. In this context, assessing the impacts of mitigation actions is becoming of growing importance.

This side event provides a great opportunity for experts to share their knowledge and experience on tools and methods used to analyse social, economic and environmental impacts of mitigation policies. It is also expected that the knowledge and experience shared during the event can be used as methodological toolkit for Parties of interest to assess impacts of mitigation actions.

Agenda

The following agenda is a provisional one and is subject to further change.

1. Opening by manager of MDA programme, secretariat of UNFCCC – 5 min.
