[1] Reference interval refers to the proposed "band." It should be expressed in absolute numbers and not as percentages (e.g. from 0 to XX MtCO₂e/yr).

[2] Absolute numbers, without application of the cap listed in the appendix to decision 16/CMP.1.

[3] Annual average for the period. This period in no way prejudices the length of the next commitment period.

[4] Each Party should provide a brief summary explaining how the data were established, including assumptions related to the treatment of natural disturbances, harvested wood products and any other relevant issues, as well as, if applicable, how elements contained in paragraph 11 Option 3 (contained in Option A of Annex II of FCCC/KP/AVG/2009/10/Add.3/Rev.3) were taken into account. Parties should also clarify how the reference interval, if included, has been taken into account. Columns can be added for this purpose.
