

AWG-KP Workshop on "potential consequences"

OPEC's perspective

Bonn, 30th March, 2009

Ramiro Ramirez
Senior Environmental Policies Analyst
Multilateral Relations Department
Research Division
OPEC Secretariat

Our common but differentiated challenge

- Huge challenges faced by developing countries
- Leap into a "new green development" paradigm
- Continue to supply the world with growing energy needs (which includes making huge investments in the "old" paradigm)
- A new low-carbon "green" economy seems to centre on job creation and investments in developed countries

Principles and Commitments by Annex I

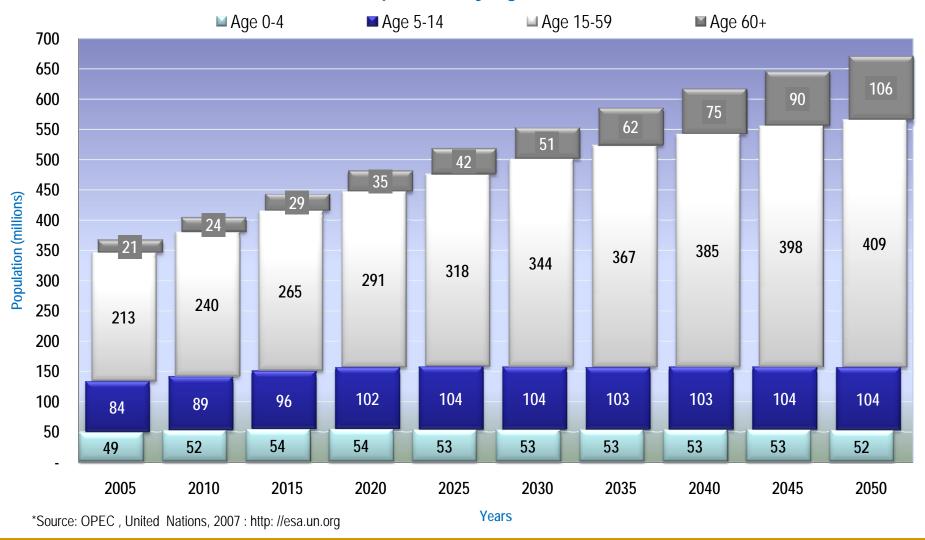

- Article 3: Principles of the Convention disproportionate or abnormal burden…
- Article 2.3 of the KP: ... minimize adverse effects....taking into account the principles guiding the Convention
- Article 3.14 ...implement commitments in such a way as to <u>minimize adverse social, environmental and economic</u> <u>impacts</u> on developing country Parties...

The text is clear

OPEC Member Countries

OPEC MCs' Population by Age from 2005 - 2050*

Adverse impacts are certain

- A shift to a low-carbon economy has a clear and deliberate outcome that will <u>adversely impact</u> all developing country fossil fuel exporters
- This has been acknowledged by the IPCC
- The transition to a low-carbon economy cannot foster more "boom-bust" cycles
- Issues of scale and appropriateness are indeed important!

How to handle uncertainty?

- For every action, there is a reaction...
- Make every effort to understand the consequences of actions that attempt to address climate change
- Scenario building and joint modelling exercises depicting possible futures and impacts need to be part of any consensus building process in order to address these issues

Thank you
