

**Energy and Climate Change –
Two different discussions?**

MONDAY, 9 JUNE 2003
3 – 5 p.m.
Room 1

The importance of energy for sustainable development is gaining increased acknowledgement by the international community, in particular after the World Summit on Sustainable Development in Johannesburg. Energy policies are crucially linked with climate change policies as well as with development policies. However, the international discourse on those issues seems to run on parallel tracks in recent years. In view of the recently adopted CSD work programme, which will deal with Energy for sustainable development, Industrial Development, Air Pollution/Atmosphere and Climate Change in 2006/2007, panelists will explore the necessity and possibilities to bring the international discussion on energy for sustainable development and climate change together.

SPEAKERS:

- ❖ Rajendra K. Pachauri (Chairman of IPCC)
- ❖ Janos Pasztor (UNFCCC Secretariat)
- ❖ Artur Runge-Metzger (European Commission, DG Environment)
- ❖ Robert Williams (UNIDO)
