Date of submission	01/03/2002

Ways and Means:

Title	Options for a mandatory registration scheme for UK refrigerant handlers
Type	Policy and measure, regulation
Category	Refrigeration – all categories
Gases affected	All HFCs
General description	A feasibility report of the introduction of a mandatory registration scheme for refrigerant handlers in the United Kingdom. The report is aimed at defining the type of refrigerant handler scheme most likely to be found appropriate for the UK. The report also includes an overview of some similar schemes globally.
Impacts on ozone depletion	This approach for mandatory registration for refrigerant handlers will ensure reduction of emissions of all refrigerants (including ozone depleting substances) through verification of individual's competence in handling refrigerants.
Impacts on global warming	This approach for mandatory registration for refrigerant handlers will ensure reduction of emissions of all refrigerants (including HFCs) through verification of individual's competence in handling refrigerants.
