

Annex 1 – Key categories

Description of methodology used

Key category analysis was done according to the provisions in Chapter 7 of IPCC GPG 2000. A tier 1 method was used to identify key categories (Chapter 7.2.1 of IPCC GPG 2000 presents the method).

Reference to the key categories tables in the CRF

The same key categories analysis was done both for completing the CRF tables and the relevant section of National Inventory Report.

Information on level of disaggregation

Key categories analysis took into account every emission source according to the provisions in IPCC GPG 2000 – Reporting Instructions and to those in UNFCCC reporting guidelines on annual inventories.
