- The guidance from COP26 establishes a clear and detailed reporting and authorization process (one consolidated process).
- Given the above, do we need more guidance?
- Are there real concerns here? What are they?
- How do we solve for these concerns while ensuring any new guidance is reconcilable with the existing one?
- How do we develop a new guidance, if any, that takes into consideration the different authorization processes established within Parties' national arrangements, underlying approaches, or mechanisms?
