C.3. Emission estimates for the European Community, 1995	78
C.4. Emission estimates for the European Community, 1996	79

I. INTRODUCTION

A. Mandate

1. By its decision 6/CP.3, the Conference of the Parties (COP) requested the secretariat to collect, process and publish, on a regular basis, national greenhouse gas (GHG) inventories submitted annually by Annex I Parties in accordance with decision 9/CP.2.¹ By its decision 11/CP.4, the COP requested Parties included in Annex I to the Convention (Annex I Parties) to submit to the secretariat, in accordance with Article 12.1 and 12.2 of the Convention, national inventory data on GHG emissions by sources and removals by sinks on an annual basis by 15 April for the period up to the last but one year prior to the year of submission. The submission of national inventory data for the years 1990 to 1997 was due by 15 April 1999.

B. Scope of the note

2. The Subsidiary Body for Implementation (SBI), at its tenth session, noted that as of June 1999 only 16 Annex I Parties had submitted their national GHG inventories. Since June additional submissions have been made. The set of the latest available GHG data for 1990-1997, and data from earlier submissions for Parties that have not yet reported inventories this year, have been compiled in this document. It contains a brief description of the status of reporting of annual GHG emission inventories, highlighting the timeliness of reporting and completeness of the data reported. The tables contain data on GHG emissions and removals by 38 Annex I Parties for the period 1990-1997, where available, as provided in the annual submissions of GHG inventories or national communications.

II. STATUS OF REPORTING

3. The tables include data from the 22 out of 39 Annex I Parties that have submitted their greenhouse gas inventory data due on 15 April 1999.² Of these 22 submissions, all but five provided their information in electronic form, in addition to printed materials. They also include data from 18 Parties that reported annual inventories in 1998 or included GHG inventories in their first or second national communications. In accordance with decision 4/CP.3, Croatia, Liechtenstein, Monaco and Slovenia have been added to Annex I to the Convention. The amendment adding these Parties to Annex I entered into force on 13 August 1998. Information for these Parties has been included in this report, with the exception of Croatia, which has not yet submitted an annual inventory or national communication.

¹ For the full texts of decisions adopted by the Conference of the Parties at its second, third and fourth sessions, see documents FCCC/CP/1996/15/Add.1, FCCC/CP/1997/7/Add.1 and FCCC/CP/1998/16/Add.1, respectively.

² These Parties are: Austria, Bulgaria, Canada, Czech Republic, Denmark, Estonia, European Community, Finland, France, Germany, Japan, Latvia, Lithuania, Monaco, New Zealand, Norway, Poland, Sweden, Switzerland, Ukraine (draft), United Kingdom of Great Britain and Northern Ireland, United States of America. Only Austria, Finland, Lithuania, New Zealand and Norway submitted their inventories on or before 15 April 1999.

4. The European Community (EC) has submitted an annual inventory for the years 1990, 1994, 1995 and 1996. As these data did not correspond in all cases to the information provided by member States, the secretariat has chosen to present the aggregate summary tables for the EC separate from the other tables.

5. As not all Parties provided recent submissions, or did not include data for all years in their most recent submissions, data have been compiled for the period 1990-1997 from the various sources. Table 1 below provides an indication of which inventory submissions or national communications were the source of data for the relevant years. As the information for these years for several Parties has been taken from various submissions, trends in emissions may not be consistent. Furthermore, as not all Parties provided data for 1997 (the most recent year included in this document),³ no totals or percentage contribution by sector are given for that year.

6. The data available from the various submissions are not always complete. In addition to not having data for all years, data were not always available for all gases or source and sink categories required in the guidelines. Where data were not available, the tables contain blank spaces.

³ Germany and Ukraine also provided some data for 1998, although these are not included in the document.

Table 1. Sources of GHG emissions data (by Party and type of submission)^a

^a This table indicates the source of GHG emissions data as well as whether data were available for specific years. However, it does not indicate whether the inventory submitted for that year covers all gases, categories, etc.

^b The Czech Republic provided revised CH₄ data for 1990 to 1996 in the inventory submission of 1999. New Zealand provided revised land-use change and forestry data in the inventory submission of 1999.

^c Data for 1990 to 1994 are taken from the 2nd national communication and the supplemental inventory submission provided by the Party.

^d A preliminary GHG inventory was submitted as part of the forthcoming 1st national communication.

^e Emissions of CO, NO_x and NMVOC were not reported in the inventory submission of 1999, but were included in the 1st national communication.

NC1=1st national communication INV98=inventory submission 1998 no data=data were not provided in the national communications or annual inventory submissions
 NC2=2nd national communication INV99=inventory submission 1999 RPT95=Report submitted in 1995

Tables

General notes

The tables below contain numerical data on GHG inventories for 38 Annex I Parties as submitted in annual GHG emission inventories or national communications. They provide data for 1990-1997 for individual Annex I Parties, although the degree of coverage varies. This is due to differences in the coverage of years in the annual inventory submissions of Parties, as well as to lack of information in some instances.

The tables provide inventory data on carbon dioxide (CO₂), methane (CH₄), nitrous oxide (N₂O), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), sulphur hexafluoride (SF₆), ozone precursors and sulphur dioxide (SO₂), and include information on international bunkers. Information on land-use change and forestry is included in aggregate estimates, and separately from other CO₂ estimates, recognizing the ongoing methodological work by the Intergovernmental Panel on Climate Change (IPCC) in this sector. To present information on HFCs, PFCs, SF₆ and aggregate greenhouse gases in a comparable manner the secretariat has used IPCC 1995 global warming potentials (GWPs) to present information in terms of CO₂ equivalents. The footnotes to the tables should be treated as an integral part of the tables.

Tables A.1 and A.2 contain information on aggregate emissions of all greenhouse gases combined (expressed as CO₂ equivalent) for the major source categories. Inventory data on the individual greenhouse gases are presented in tables A.3 to A.17. The trends in total greenhouse gases and in emissions of the various gases, and for the most important sectors for 1990 to 1997, are given in tables B.1 to B.15. Emission estimates reported by the European Community are presented in tables C.1 to C.4.

It should be noted that figures may differ slightly from those submitted to the secretariat as a result of rounding during data input and processing, corrections of typographical and calculation errors or omissions, and the presentation (for consistency and comparability) of subtotals and totals not provided in the annual inventory submissions, communications or other submissions. Some differences are also due to the fact that, in striving to ensure the consistency and comparability of results, some of the estimates reported had to be converted so that they concur with the format of the current IPCC Guidelines for the reporting of greenhouse gas emissions.

Explanatory notes

Blanks in the tables signify an absence of quantitative information. The secretariat has chosen to leave the spaces blank in order not to complicate the reading of the tables. The figure "zero" appears in the table only when reported as such by Parties.

The IPCC 1996 Revised Guidelines for National Greenhouse Gas Inventories are referred to in this document as the IPCC Guidelines, and the revised guidelines for the preparation of national communications by Annex I Parties (FCCC/CP/1996/15/Add.1, decision 9/CP.2, annex) as the UNFCCC guidelines. Categories of sources of GHG emissions or their sinks corresponding to

the IPCC Guidelines nomenclature are given in *italics*.

The following chemical symbols and abbreviations have been used:

CF₄	perfluoromethane
C₂F₆	perfluoroethane
C₃F₈	perfluoropropane
C₄F₁₀	perfluorobutane
C₆F₁₄	perfluorohexane
CH₄	methane
CO	carbon monoxide
CO₂	carbon dioxide
HFCs	hydrofluorocarbons
N₂O	nitrous oxide
NO_x	nitrogen oxides
NMVOCs	non-methane volatile organic compounds
PFCs	perfluorocarbons
SF₆	sulphur hexafluoride
SO₂	sulphur dioxide

The following units of mass have been used:

Gg	gigagram (10 ⁹ grams)
Mg	megagram (10 ⁶ grams)

The following other abbreviations have been used:

GHG	greenhouse gas
GWP	global warming potential

^a Aggregate emissions of CO₂, CH₄ and N₂O, and HFCs, PFCs and SF₆ where reported (see table A.11), using 1995 IPCC global warming potentials.

^b Includes *solvent use, waste, other* and CH₄ and N₂O from *land-use change and forestry*.

^c Aggregate emissions of all greenhouse gases excluding CO₂ emissions and removals from *land-use change and forestry*.

^d CO₂ estimates for *land-use change and forestry* as reported in accordance with the present IPCC Guidelines for National Greenhouse Gas Inventories (see table B.7).

^e Aggregate emissions of all greenhouse gases including CO₂ emissions from *land-use change and forestry*.

^f In accordance with decision 9/CP.2, some Parties with economies in transition use base years other than 1990: Bulgaria (1988); Hungary (average of 1985-1987); Poland (1988) and Romania (1989).

^g The Party also provided CO₂ estimates adjusted for temperature correction, and in the case of Denmark also for electricity exchange, but non-adjusted estimates were used for the calculation of aggregate emissions for comparison and consistency purposes.

^h The Party did not provide any estimates from the *land-use change and forestry* sector in its national inventory.

^a All remaining emissions from non-specific fuel combustion including emissions from military fuel use.

^b In accordance with decision 9/CP.2, some Parties with economies in transition use base years other than 1990: Bulgaria (1988); Hungary (average of 1985-1987); Poland (1988) and Romania (1989).

^c Party also provided estimates adjusted for temperature correction, and in the case of Denmark also for electricity exchange, but non-adjusted estimates were included in this table for comparison and consistency purposes.

^d *Fuel combustion* emissions from territories of the United States of America are included under *other*.

^e The percentage of the total accounted for by each category has been calculated on the basis of the overall total excluding the Russian Federation and Ukraine (10,976,787 Gg) since data for the individual categories were not provided. However, the total for all the Parties given in the last column (13,947,762 Gg) does include the Russian Federation and Ukraine.

^a All remaining emissions from non-specific fuel combustion including emissions from military fuel use.

^b Party also provided estimates adjusted for temperature correction, and in the case of Denmark also for electricity exchange, but non-adjusted estimates were included in this table for comparison and consistency purposes.

^c *Fuel combustion* emissions from territories of the United States of America are included under *other*.

Table A.7. Anthropogenic CH₄ emissions by source category, 1990 (Gigagrams and percentage of total by Party)

	Energy				Agriculture				Waste		Other ^c		Total (Gg)
	Fuel combustion		Fugitive fuel		Livestock ^a		Other ^b		(Gg)	%	(Gg)	%

^a Estimates given in this table refer to actual emissions, except in cases where only potential emissions have been reported, as was the case for the Czech Republic, Finland and Japan. New Zealand also reported potential emissions, with the exception of some PFCs (emissions from aluminium production). Iceland reported actual emissions for PFCs and SF₆, but potential emissions for HFCs. The Netherlands reported actual emissions for HFCs and PFCs, but potential emissions for SF₆. Sweden reported actual emissions for PFCs, but potential emissions for HFCs and SF₆. Austria and the Russian Federation did not indicate whether emissions were actual or potential.

^b As the Party did not provide estimates of PFCs for 1997, estimates for 1996 are given in this table.

^c As the Party did not provide estimates of SF₆ for 1997, estimates for 1996 are given in this table.

^d Party did not report the exact chemical species of all these gases so it was not possible to calculate the emissions in terms of CO₂ equivalent (see tables A.12 and A.13).

^e Estimates for 1998 rather than 1997 were provided by the Party, and are given in this table.

^f As the Party did not provide estimates of HFCs for 1997, estimates for 1996 are given in this table.

^g Party did not report estimates, but indicated that emissions were negligible.

^a Estimates given in this table refer to actual emissions, except in cases where only potential emissions were reported, as was the case for the Czech Republic, Finland, Iceland, Japan, New Zealand and Sweden.

^b Estimates for 1998 rather than 1997 were provided by the Party, and are given in this table.

^c Party only reported aggregate emissions of HFCs.

^d 1996 data are given here as 1997 data were not reported.

^e Party did not report estimates but indicated that emissions of HFCs were negligible.

^a Estimates given in this table refer to actual emissions, except in cases where only potential emissions were reported, as was the case for New Zealand and Sweden.

^b Party only reported aggregate emissions of HFCs (see table A.12a).

^c 1996 data are given here as 1997 data were not reported.

^d Emissions of HFC-236fa are given under *other*.

^e Emissions of HFC-227ea are given under *other*.

^f Party did not report estimates, but indicated that emissions of HFCs were negligible.

^g Emissions reported as unspecified HFCs are given under *other*.

^h Emissions of HFC-43-10mee for 1995 are given under *other*, as are emissions of HFC-43-10mee (1,479 Mg) and HFC-236fa (175 Mg) for 1997.

^a Estimates given in this table refer to actual emissions, except in cases where only potential emissions were reported, as was the case for the Czech Republic, Finland and Japan. The Netherlands and Sweden reported actual emissions for PFCs, but potential emissions for SF₆.

^b 1996 data are given here as 1997 data were not reported.

^c Party only reported aggregate emissions of PFCs.

^d Estimates for 1998 rather than 1997 were provided by the Party, and are given in this table.

^e PFC emissions are emissions of C₆F₁₄ (8 Mg) and C₃F₈ and C₆F₁₄ (2 Mg).

^f Total PFC emissions include emissions of C₃F₈ and C₄F₁₀ (high boiling pyrolysis by-products).

^g Party did not report estimates, but indicated emissions of PFCs and SF₆ were negligible.

^h Total PFC emissions include unspecified PFC emissions not related to aluminium production.

ⁱ Total PFC emissions include emissions of C₃F₈.

^j Total PFC emissions include emissions of C₆F₁₄.

^a Aggregate emissions of CO₂, CH₄ and N₂O using IPCC 1995 global warming potentials. Does not include emissions of HFCs, PFCs and SF₆ as estimates for these gases were not reported by all Parties, for all years or in sufficient detail to convert estimates into CO₂ equivalents.

^b The trend shown here may not be fully consistent since data for the entire period were not provided in the latest submission (see table 1 in section II of this document) and different sources of data were used.

^c In accordance with decision 9/CP.2, some Parties with economies in transition use base years other than 1990: Bulgaria (1988); Hungary (average of 1985-1987); Poland (1988) and Romania (1989).

^d Party reported only emissions of CO₂ and CH₄, not N₂O, for 1995-1997, so no aggregate emissions for these years are provided here.

Table B.2. Aggregate emissions of CO₂, CH₄ and N₂O,^a 1990-1997, including land-use change and forestry^b (Gigagrams of CO₂ equivalent and percentage change)

^a Aggregate emissions of CO₂, CH₄ and N₂O using IPCC 1995 global warming potentials. Does not include emissions of HFCs, PFCs and SF₆ as estimates for these gases were not reported by all Parties, for all years or in sufficient detail to calculate emissions in terms of CO₂ equivalents.

^b Estimates for *land-use change and forestry* are as reported in accordance with the present IPCC Guidelines for National Greenhouse Gas Inventories (see table B.7).

^c In accordance with decision 9/CP.2, some Parties with economies in transition use base years other than 1990: Bulgaria (1988); Hungary (average of 1985-1987); Poland (1988) and Romania (1989).

^d The trend shown here may not be fully consistent since data for the entire period were not provided in the latest submission (see table 1 in section II of this document) and different sources of data were used.

^e In its most recent inventories (1996 and 1997) the Party reported the CO₂ uptake by new forest planted since 31 December, 1990 and also reported the CO₂ uptake due to net increment in existing forest. For consistency with data given for 1990 to 1995, the latter are presented here.

^f Party included CO₂ emissions from soil in its 1997 inventory while not for earlier years. As a result of inclusion of this category for 1997, net emissions from land-use change and forestry were reported, while net removals were reported for 1990-1996. For this reason the percentage change in the last column is not calculated.

^g As the Party did not provide estimates from the *land-use change and forestry* sector, no estimates are given in this table.

^h As the Party did not provide estimates from the *land-use change and forestry* sector for 1996 and 1997, no estimates for these years are shown here.

ⁱ Party reported only emissions of CO₂ and CH₄, not N₂O, for 1995-1997, so no aggregate emissions are provided here.

Table B.3. Total anthropogenic CO₂ emissions, excluding land-use change and forestry, 1990-1997 (Gigagrams and percentage change)

^a Estimates for *land-use change and forestry* are as reported in accordance with the present IPCC Guidelines for National Greenhouse Gas Inventories. In this table negative values in gigagrams indicate net removal of CO₂ from the *land-use change and forestry* sector; negative values in percentage represent a decrease in removals in relation to the year 1990 and positive values indicate an increase in removals, except for Australia and the United Kingdom where the negative values in percentage change indicate less emissions or greater removals.

^b The trend shown here may not be fully consistent since data for the entire period were not provided in the latest submission (see table 1 in section II of this document) and different sources of data were used.

^c In accordance with decision 9/CP.2, some Parties with economies in transition use base years other than 1990: Bulgaria (1988); Hungary (average of 1985-1987); Poland (1988) and Romania (1989).

^d In its most recent inventories (1996 and 1997) the Party reported the CO₂ uptake by new forest planted since 31 December 1990 (24 Gg and 30 Gg in 1996 and 1997, respectively) and also reported the CO₂ uptake due to net increment in existing forest. For consistency with data given for 1990 to 1995, the latter are presented here.

^e Party included CO₂ emissions from soil in its 1997 inventory while not for earlier years. As a result of inclusion of this category for 1997 net emissions from land-use change and forestry were reported, while net removals were reported for the years 1990 to 1996. For this reason the percentage change in the last column is not calculated.

^f Although the Party did not include any estimates from the *land-use change and forestry* sector in its national inventory, it stated in the national communication that the annual carbon sink from stem wood has been between 12,500 and 37,500 Gg.

^g The estimates include CO₂ emissions from upland and lowland drainage, and peat extraction, and removals by salt marshes.

Table B.8. Total anthropogenic CH₄ emissions, 1990-1997 (Gigagrams and percentage change)

^a Estimates for the various categories given here do not necessarily correspond to the total emissions of these categories reported separately by individual member States of the European Community, which are given in tables A.1-A.17 and B.1-B.15.

^b These estimates consist partly of 1996 and partly of 1994 (Portugal) and 1995 data (Italy and Spain)

^c Total national emissions of CO₂, excluding land-use change and forestry (corresponding to format in tables A.3 and B.3), are 3,337,872 Gg.
