DESCRIPTION

Africa has only contributed an estimated 4% to global greenhouse gas emissions and remains the most susceptible continent to climate change impacts.

However, many of the voices dominating climate change conversations are those of journalists from the Global North; we want to be able to diversify the narrative pool so climate information can become more accessible to African communities.

Because of this, Acquire by Pin Africa has made it a top priority to teach storytellers about climate change.

Join this course if you want to learn how to tell stories of impact that will help inform Africans about the current realities of the world's climate conditions.
