DESCRIPTION

The Climate Vulnerability and Capacity Analysis (CVCA) is a CARE tool used to gather and analyze information on community-level vulnerabilities and climate change capacities.

It informs the identification of actions, at the community level or more broadly, that support communities in increasing their resilience to climate change.

Recognizing the context-specificity of climate impacts and the socioeconomic dimensions of climate change adaptation, CARE developed the CVCA Handbook to guide practitioners in analyzing vulnerability to climate change and adaptive capacity at the community level.
