## Topic(s)

Adaptation

## DESCRIPTION

The S8DS downscaler is a web application tool based on a Graphic User Interface (GUI) to develop climate projection models with just click and drag functions.

The user has an opportunity to submit downscaling and projection computing orders to a high-performance computer (or supercomputer) at no cost from a desktop or Personal Computer.

The tool also allows practitioners to assess global climate scenarios at the local scale without highly specialized technical expertise, assisting them in the design of the adaptation solution
