DESCRIPTION

A lack of institutional and individual capacity often undermines the long-term impact of otherwise technically sound programmes.

To support efforts towards establishing or strengthening forest monitoring, the Food and Agriculture Organization of the United Nations (FAO) has developed a National Forest Monitoring System (NFMS) assessment under the project “Building global capacity to increase transparency in the forest sector (CBIT-Forest)” .

The tool aims to assist countries in identifying capacity gaps and weaknesses including capacity assessment of the system and facilitation of dialogue with key national stakeholders.
