DESCRIPTION

The GHG Abatement Cost Model (GACMO) aims to support countries or regions in analyzing their GHG mitigation options to prepare information for their NDCs, National Communications, or Low-Carbon Development Plans.

Developed by UNEP DTU Partnership, GACMO can calculate and visualize a comparison of the business-as-usual scenario with selected mitigation scenarios to support the analysis of GHG mitigation options and their cost.

Such information helps prepare among others: revisions of NDCs, National Communications, and Low-Carbon Development Plans.

This tool comes with a series of training as a supporting guideline.
