DESCRIPTION

The project aims to establish and build an understanding of the crucial role of peri-urban ecosystems by highlighting the inter-complementarity between the livelihoods of the peri-urban inhabitants and the contribution of ecosystems in urban resilience.

It also aims to further mainstream ecosystem-resilience integration in capacity development programmes of apex institutions.

The project's objective is to assess the knowledge needs and capacity gaps on linkages and inter-complementarity between peri-urban ecosystems and urban resilience and find pathways to address these through existing research outcomes and practice-based experiences.
