DESCRIPTION

This paper considers the concept of a “data loop” —a relationship between the government and the private sector that focuses on strengthening collaborative efforts to enhance climate ambition through data sharing—in the Indonesian context.

The concept of the data loop builds upon previous research suggesting that a similar relationship could lead to enhanced climate action: an ambition loop.

An ambition loop is a virtuous feedback loop in which bold policy action is supported by bold company leadership, resulting in the acceleration of further business action, faster progress to meet national targets, and the seizure of more significant market opportunities
