## DESCRIPTION

This technical note describes a method for determining the extent to which Parties to the Paris Agreement have enhanced their nationally determined contributions (NDCs) concerning greenhouse gas (GHG) mitigation.

Party' s target-year GHG emissions under its previous NDC (typically First NDC) and under its subsequent NDC (typically Updated First NDC or Second NDC) were estimated and on this basis of that it was determined whether the subsequent NDC reduces emissions relative to the previous NDC and - where possible- by how much.

Different approaches for NDCs with GHG reduction targets were outlined and compared with non-GHG targets and policies
