## DESCRIPTION

The Skills Development for the Renewable Energy Sector (SkiDRES) was a 19-month pilot project aimed at developing and building partnerships with the private sector, assess market needs, develop and test demand-driven training, and prepare for a three-year Public Private Development Partnership, with sub-regional coverage in Africa.

The project objective is to bridge the skills gap in the Renewable Energy and Energy Efficiency (REEE) sub-sectors in Zambia and more generally in the SADC region.

As a pilot intervention, the SkiDRES project was developed to test and validate the viability of a Public Private Development Partnership (PPDP) approach in the skills for REEE subsectors.
