DESCRIPTION

Peru and its people will be highly affected by climate change, meeting seven of nine vulnerability characteristics recognized by the United Nations Framework Convention on Climate Change (UNFCCC) (Stevens, 2018).

While worsening climate impacts will significantly affect the country, women and the poor are especially at risk. In 2014, Peru was the first country in Latin America to develop a gender and climate change action plan.

This case study summarizes the country's subsequent successes and challenges in rolling out its Gender and Climate Change Action Plan across multiple sectors, providing lessons to inform other countries.
