## DESCRIPTION

This training manual aims to contribute to strengthening the technical capacities of public officials who directly or indirectly manage fisheries and aquaculture in Chile.

It is expected that the trained students will apply and transmit the knowledge acquired in their work, especially to the stakeholders with whom they interact.

This training tool was designed to be implemented through a blended (b-learning) or e-learning course and required a multidisciplinary teaching team with experience in the subjects contained in the learning modules and knowledge of how the institutional framework associated with fisheries and aquaculture works.

The appropriate combination of pre-recorded video classes available on a virtual platform of the Universidad de Concepción with synchronous virtual classes, facilitated the accessibility and participation of students.
