## **DESCRIPTION**

In 2020, FAO launched a series of interactive online trainings to strengthen the Uganda Development Bank's (UDB) knowledge of agriculture's environmental impact, as well as its capacity to assess the greenhouse gas emissions and carbon balance of loan applications.

The three-year initiative encourages private investments in Uganda's agriculture and agribusiness sectors that contribute to achieving the Sustainable Development Goals.

Designed by the FAO Investment Centre, the initiative seeks to strengthen the Bank's capacity for digital finance, pipeline building, environmental, climate and social risk management and impact assessment, among others.
