## DESCRIPTION

The CityAdapt project, funded by the Global Environment Facility (GEF) and implemented by the United Nations Environment Programme (UNEP), promotes climate resilience in urban areas by implementing Nature-based Solutions (NbS) for adaptation to climate change.

Based on the CityAdapt experience in 3 Latin American cities, Xalapa, San Salvador and Kingston, this guide explains practical methods for identifying (Section 1), designing (Section 2), implementing (Section 3) and monitoring (Section 4) NbS in urban contexts.
