DESCRIPTION

Transparency is a key element of effective national and international climate action as it helps build up confidence and trust between Parties and with non-Parties stakeholders. Transparency covers reporting on the past, present and future state of greenhouse emissions, efforts to reduce greenhouse gases as well as building resilience to the inevitable impacts of climate change and the means of implementation such as finance, technology transfer and capacity-building.

A number of decisions have mandated training programmes for experts to enable them to participate in various activities related to the assessment and analysis of the information submitted by all Parties under the Convention and the Paris Agreement.

A prerequisite for becoming an expert reviewer under the Convention and the Paris Agreement is that experts are nominated to the UNFCCC Roster of Experts (RoE) and pass one of the certification programmes. To register for the examinations to become an expert reviewer you need to be nominated to the UNFCCC Roster of Experts.
