DESCRIPTION

Mainstreaming migration into NAPs is critical to harness the benefits of migration for climate adaptation while building community resilience and adaptive capacity for minimizing displacement and forced migration. The Technical Guide provides a step-by-step guide for relevant stakeholders to mainstream migration into the adaptation planning. It incorporates experiences of mainstreaming human mobility into the NAPs in Central Asia, East and Horn of Africa, Eastern Europe, the Pacific, South Asia, South-East Asia, and Latin America. Therefore, it is fully aligned with the theme of the Bridging Capacities, Climate and Migration Day by placing the individuals and communities at the centre of climate change adaptation while promoting a human rights-based and gender-sensitive approach.
