SCF Forum, 5+6 September 2016, Manila

# The odds and beauties of risk transfer schemes

#### MCII: What Do We Do?

#### **1.** Support policy making processes:

• UNFCCC, Sendai Framework, SDGs, IPCC, etc.

#### **2.** Research efficient and inclusive risk management tools:

- Efficient insurance linked risk transfer mechanisms for vulnerable people/sovereigns
- Incentives for risk reduction through insurance

#### 3. Testing approaches on the ground:

Lighthouse projects to gather results and feed-back lessons into policy processes.

## Risk transfer for lower probability, higher risk events

### The Gap: low insurance density in exposed regions

#### The 'odds' for implementing insurance based tools

#### **Institutional hurdles**

Low familiarity with insurance;

direct insurance reaches only a small fraction of vulnerable population

Limited **purchasing power** to cover the cost of insurance

Limited financial & regulatory infrastructure

Visibility of **business case** for insurers to participate

#### Customer acceptance and understanding as hurdle

Missing understanding of financial concepts

Customers expect government to protect them from extreme weather events

Missing understanding of the level of risk, especially of reoccurring risks

Reluctance to accept recommendations for risk management coming from the private sector

In developed markets

"We will aim to increase by **up to 400 million** the number of people in the most vulnerable developing countries who have access to **direct or indirect insurance coverage** against the negative impact of climate change related hazards **by 2020** and support the development of early warning systems in the most vulnerable countries" (G7 2015).

#### MCII is supporting G7 InsuResilience in reaching its target group and increasing their resilience

- How can InsuResilience effectively contribute to building the resilience of its target group?
- What are success factors, challenges and an enabling environment for climate risk insurance which targets the poor and vulnerable?

### The (potential) beauties of climate risk insurance

	Contribution of climate risk insurance	
Anticipate	✓ Catalyze risk assessment	
Absorb	<ul> <li>Improve financial liquidity after a disaster</li> <li>Reduce of distress asset sales</li> <li>Increase food security</li> <li>Enable rapid recovery</li> </ul>	auilding
Adapt	<ul> <li>✓ Increase savings</li> <li>✓ Increased productivity</li> <li>✓ Improve credit worthiness</li> <li>✓ Increase investment in higher return activities</li> </ul>	Resilience building
Transform	<ul> <li>✓ Promote risk reduction behavior</li> <li>✓ Foster a culture of prevention and resilience, moving a way from post-disaster aid</li> </ul>

/ information on this aspect is unavailable, impact could not be anlaysed

+ positive impact (middle evidence based on personal assessment of experts)

+ positive impact (strong evidence based on proper impact evaluation)

#### **Best practice: Livelihood Protection Policy**

Clir		
	safety net to previously excluded persons (low-income segment) ster climate adaptation and sustainable development.	
Target countries	Jamaica, Saint Lucia, Grenada	
Time frame	20011-2014/2016-2019	Contra and a second
Product	Parametric microinsurance cover against excess rain/heavy winds	
Partners	Implementation by MCII, partnering with Caribbean Catastrophe Risk Insurance Facility (CCRIF), DHI and Munich Re.	
Funding	German Federal Ministry for the Environment, Nature Conservation and Nuclear Safety (BMU) under the International Climate Initiative	

#### **Best practice: key lessons learned**

Holistic, needs based solutions	<ul> <li>Demand study (2011) provided basis for product design and implementation</li> </ul>
	- Plan to embed LPP in national risk management plans (e.g. "Model
	Parish Concept" in Jamaica)
Enabling environment	<ul> <li>Provided best available practices on microinsurance regulations to enable regulatory frameworks to accommodate (new) index- insurance &amp; microinsurance regulations</li> </ul>
Provide reliable and needs-based coverage	- LPP can be bought in multiple "slices" to be adaptable to coverage needs of clients.
Affordability of premiums	- LPP offers an affordable premium for low-income segment
	- Participation is not restricted to income level, specific sector
	affiliation or occupation.
Accessible delivery channels	- Engaged with local distribution channels as first-point-of-contact
	and their role in educating clients on the use of the LPP.
	- Explored innovative marketing strategies such as street theatre
	plays in local dialects explaining the benefits of the LPP.
Participation & capacity building for all relevant actors	- Tailored trainings for local primary insurers, distribution channels,
	regulators, and clients on the introduction of new product
	- Train-the-Trainer workshops for local primary insurers

#### To sum up, insurance is...

- …not a cure for all risks
- …enhances economic well-being
- …if well designed
- …and part of comprehensive DRM plan

#### Annex

#### Who is MCII?

- Non-profit charitable association; leading innovation lab on climate change & insurance.
- Launched in 2005 based on UNFCCC (Article 4), Kyoto Protocol (Article 3): Insurance plays a role in adaptation to climate change!
- Mission: Provide a forum for insurance-related expertise on climate change impacts and explore ways how to develop sustainable approaches that create incentive structures for risk- and poverty reduction.
- Governance: MCII Executive Board + MCII Membership
- □ Members: Individual experts from a variety of backgrounds, incl.:

Insurers (Munich Re, Allianz, Hannover Re)

Regional Risk Insurance Pools (CCRIF, ARC)

**United Nations / Multilateral Organisations** (UNU-EHS, World Bank)

**Foundations, Enablers** (Munich Re Foundation, Global Risk Forum Davos)

**NGOs** (Germanwatch, RESULTS UK)

Research & Academia (IIASA, IASS Potsdam, legal experts)

Think Tanks (Deltares, ICLR, RDL, Climate Analytics)

Independent Consulters (PwC, private insurance experts)

### MCII study on pro-poor insurance for InsuResilience

- 18 case studies of existing climate risk insurance schemes
- Interviews with experts from the fields of insurance, climate risk management, climate change adaptation

Level	Scheme	Acronym	Country/Region
Micro	Index-Based Livestock Insurance Program	IBLIP	Mongolia
	Modified National Agricultural Insurance Scheme	MNais	India
	Philippine Crop Insurance Program	PCIP	Philippines
	SANASA Agricultural insurance	SANASA	Sri Lanka
	PepsiCo - Scheme	PEPSICO	India
	R4 Inititiave	R4	Ethiopia
	MicroEnsure	MICROENSURE	Rwanda
	Agriculture and Climate Risk Enterprise	ACRE	Kenya Rwanda Tanzania
	National index-based disaster insurance program (weather derivative)	NIBDIP	Malawi
	for Malawi		
	Index based livestock insurance	IBLI	Kenya, Ethiopia
	Microinsurance Catastrophe Risk Organisation (Micro Haiti)	MICRO-HAITI	Haiti
	La Positiva <u>Seguros</u>	LA POSITIVA	Peru
	Livelihood Protection Policy	LPP	Latin America & Caribbean
Meso	PlaNet Guarantee	PLANET GUARANTEE	Mali, Burkina Faso
	Index Based Flood Insurance Project	IBFIP	Bangladesh
Macro (Pan-national	Caribbean Catastrophe Risk Insurance Facility	CCRIF	Caribbean
fund)	African Risk Capacity	ARC	Africa
	National Disasters Fund (FONDEN) & AGROASEMEX	FONDEN/ AGROASEMEX	Mexico
	Pacific Catastrophe Risk Assessment and Financing Initiative	PACRAFI	Pacific

#### **Different instruments for different needs**

	Macro / sovereign level ins.	Primary insurance
Ease of distribution	Depending on government infrastructure	Depending on insurance company infrastructure and tailoring to the market
Pay out in case of claim	Relatively quick	Indemnity-based: lengthy claim process Index / parametric: quick
Incentive for prevention	Moral hazard on end beneficiary level, can be addressed by obligatory preventive measures	Insurance pricing discovers risk and provides incentive for prevention Natural proximity between risk and beneficiary
Financial sustainability	Depending on continuous government / donor funding	Long-term sustainable (if risk adequate premiums are paid by the insured)

## Example for micro-insurance: Sahel Crop Insurance

- Insurance policy coupled with loan for seed purchase
- Since 2011
- In 2013 over 15,000 farmers in Burkina Faso and Mali took out policies with Allianz Africa
- Index-based, easy payouts
- · Basic financial education for farmers
- Caution: Sensation of security, risky behavior?

#### Quote

"When the rains failed I was really surprised when the insurance company came the long way to my village to bring me the news that I receive an insurance payment for my seed loan.".

BARTHELEMY KOHOUNA FARMER FROM POUNDOU,A VILLAGE OF 4,000 PEOPLE IN BURKINAFASO

## Example for risk assessment and development of insurance market: **RIICE**

- Public-private partnership since 2012
- 7 Asian countries
- Development of remote-sensing system which serves as an early-warning system
- Basis for development of insurance market for smallholder rice farmers

"We want to transfer the financial risks that small-holder farmers face from natural catastrophes to the formal insurance market. Through the remote sensing technology we have a reliable and unbiased tool to calculate insurance premiums and evaluate the losses.<sup>2</sup>

**AMER AHMED ALLIANZ RE CEO** 

## Example for national level insurance: Uruguay weather and oil price insurance

- A PPP between World Bank, Swiss Re and Allianz Risk Transfer
- Since 2014 in Uruguay
- First index-based weather insurance for hydroelectric power coupled with oil price
- Decreases the country's financial exposure in times of drought
- Swiss Re Corporate Solutions and Allianz Risk Transfer took on a material part of the risk

"Combining protection against the risk of drought and high oil prices is something that works particularly well for hydropower companies [...] This transaction is a good example of how we can focus our financial and technical expertise, combined with experiences in other countries, to deliver solutions that meet specific client needs.

MADELYN ANTONCIC Vice-President and Treasurer of the World Bank
