

Session 2: Understanding future needs: Institutions outside of the Convention process (1)

1. Informed policy setting and action through strengthened information and data

- **Promoting standardization of methodologies or guidance** for countries on how to collect, generate, analyse and track climate-related loss and damage (historic and future)
- **Calling for the establishment of monitoring or tracking systems** to routinely collect climate-related loss and damage data for analysis
- **Initiating the assessment of needs for addressing gaps** in current methodologies and systems
- **Continuing to advocate and promote** international support for efforts at all levels to collect, track and maintain the information and corresponding capacity development support to ensure effective institutionalization and financing of these efforts

Session 2: Understanding future needs: Institutions outside of the Convention process (2)

2. Enhanced institutional alignment and joint action across disciplines and scales

- **Establishing a multi-disciplinary group** with representatives from across different issue areas, to share information and best practices from their field
- **Advocating for better aligned funding streams** to ensure joint action is supported at the national/sub-national level
- **Understanding the linkages between existing frameworks**
- **Keeping track of existing institutional arrangements** related to loss and damage, drawing on the initial mapping done by UNFCCC, in a dynamic and interactive way
