RISK TALK AN EXCHANGE ON CLIMATE RISK TRANSFER SOLUTIONS

How does Risk Talk work?

Risk Talk uses the Starmind technology and offers intuitive and easy access to climate risk transfer experts globally.

01 You have a question...

02 You type in the question...

03 Similar questions from the past are displayed.

04 Your unique question is automatically directed to a pool of experts.

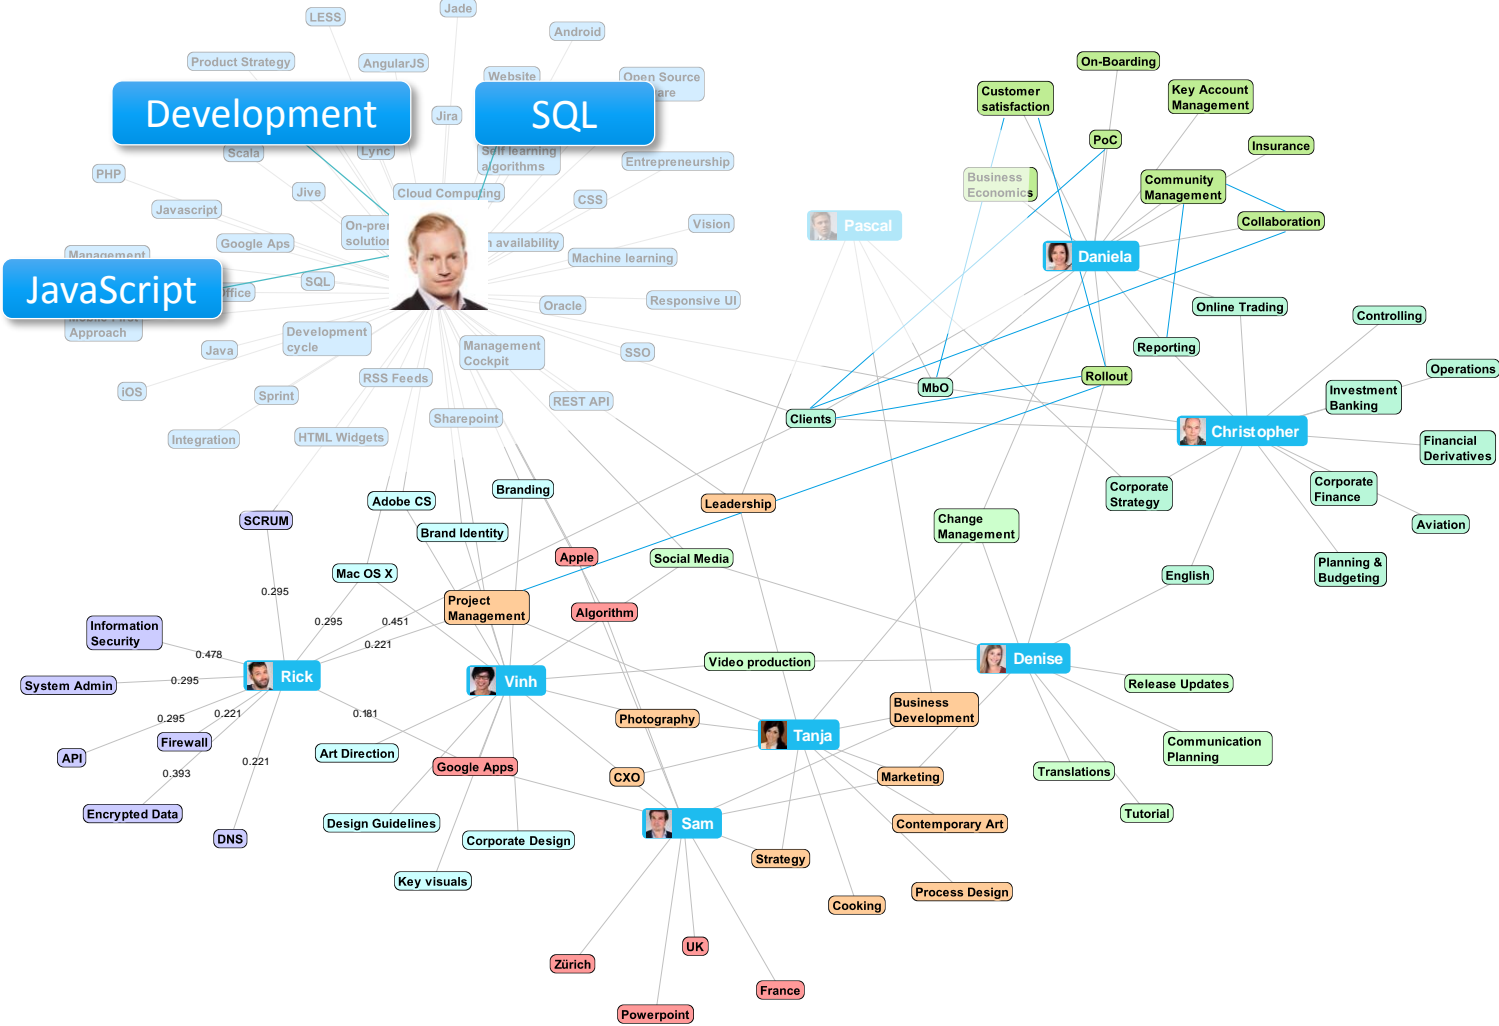

05 You receive a response to your question!

You have instant access to the information you sought for.

Rate the answer or continue the dialogue with the expert for further details.

How does Starmind work?

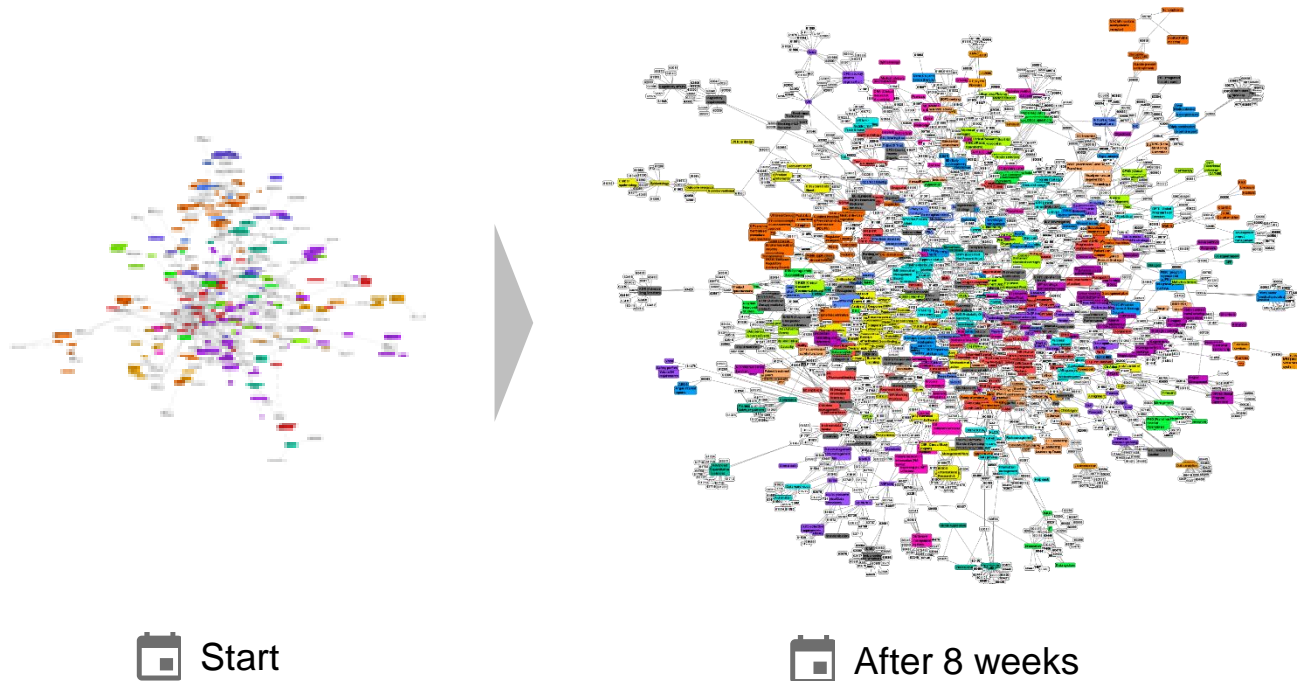

Starmind dynamically maps the knowledge of every user through every interaction

Knowledge maps evolve through the Q&A

/ 4

Starmind automatically generates weighted relationships among topics as well as between topics and experts

- Through the self-learning algorithm, Starmind is able to make **connections between people and their expertise** as well as among different expertise topics.
- The knowledge map **is constantly evolving** with new topics that come up within the community.
- **Knowledge** as well as **willingness to share know-how** in a certain field are both considered important to identify experts.
- The longer Starmind is being used, the more mature and powerful the **knowledge universe** becomes.
- The self-learning mechanism not only **allows to answer questions** directly but also **to find the right expert for a topic in any moment in time**.

“If I see what problems can be solved by whom, you get a very accurate picture of people’s true expertise”

IT Manager, Large Car Supplier

How does the Starmind brain grow?

/5

Your Risk Talk knowledge universe grows with each question and solution – day by day

The longer Starmind is being used, the more mature and powerful the **Risk Talk knowledge universe** becomes.

THANK YOU!
