What is IATI?

Multi-Stakeholder

Common Standard

Single point of access
IATI enables organisations to publish data that is...

- In a standardised format
- Regularly updated
- From a range of actors
- All in one place
- Forward looking
- Comparable
How does IATI work?

Curates & uses data
Why use IATI when you can create a new standard?

- IATI is already used by many countries, agencies and organisations
- It would be time-consuming and expensive to create a new standard
- There would be duplication of effort in using multiple standards
- IATI can adapt to include needed data types
A few major benefits

- Lower reporting costs
- Timely data
- Partner countries can import data
