# Investment and financial flows to address climate change

Yvo de Boer Executive Secretary

Presented to:

Dialogue on Long-Term Cooperative Action Vienna – August 28, 2007

#### Introduction

- Project launched in 2007 in response to COP 12 mandates: assessment of investment flows needed in 2030 that will be necessary to meet worldwide mitigation and adaptation requirements
- Consultations with IFIs,UN agencies,IGOs, NGOs, private sector and civil society
- Analysis was based on existing work
- The results should be seen as indicative only
- To be used as instrument panel for developing options to improve I&F flows

### Key findings

- The additional estimated I&F flows needed in 2030 is large compared with the funding currently available under the Convention and its KP, but small in relation to estimated GDP (0.3 to 0.5%) and global investment (1.1 to 1.7%) in 2030:
  - Mitigation measures needed to return global GHG emissions to current levels in 2030, require additional I&F flows between USD 200-210 billion in 2030.
  - Adaptation additional I&F flows needed for in 2030 amount to several tens of billions of USD.

## Key findings

- Incentives and a large share of investment and financial flows will need to be directed to developing countries where most of the cost effective opportunities for reducing emissions will happen and because they will be particularly vulnerable to climate change impacts.
- When considering means to enhance investment and financial flows to address climate change in the future, it is important to focus on the role of privatesector investments as they constitute the largest share of investment and financial flows (86 %).

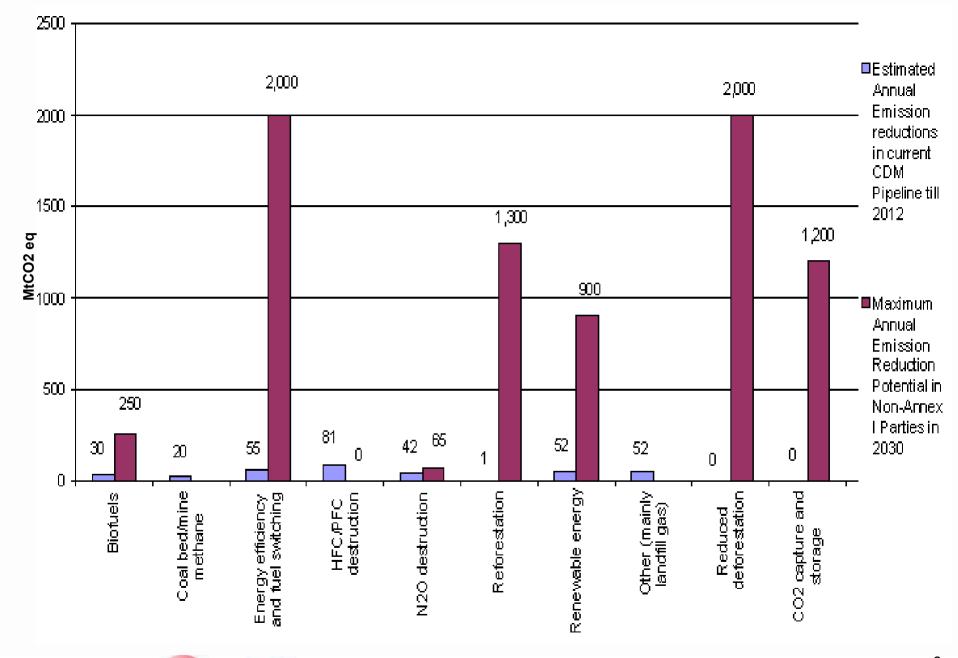

#### Instrument panel

- Creating climate change safe future will require:
  - Shifts in investment patterns,
  - Scaling up funding,
  - Optimising the allocation of existing funds.
- With appropriate policies and/or incentives, a substantial part of the additional I&F flows needed could be covered by available sources.
- Additional external public funding for climate change mitigation and adaptation will be needed particularly for sectors in developing countries that depend on government I&F flows.

#### Instrument panel

- How can the Climate Change Convention and its Kyoto Protocol influence future I&F flows?
  - Expanded carbon markets
  - Adaptation Fund
  - Financial mechanism / ODA
- What other options should be considered to address I&F flows in a future regime?
  - New sources
  - National Policies
  - Int'l coordination
