

Report-back from breakout group 4

Key issues discussed

- Need to identify and prioritize needs (for mitigation and adaptation) in order to estimate costs
- Difficult to understand NDCs
- Lack of coordination between ministries
- How to integrate all the local strategies in one national plan —
- Cost deriving from reconstruction due to climate change and shifting to better practices
- Lack of information system and need to integrate those into their national development plans

Actions / Next steps

- Establish what has to be done by private and public sectors and fill the gaps existing between them.
- Good example to follow: the Philippine National Action Plan on biodiversity and Colombian Climate Finance Strategy
- Importance of leadership at national level for coordinate and align policies
- Case based approach — going from policies towards finances (bottom-up approach — going from micro to macro)
- Cluster agencies with common road map
- Financial, capacity-building and retention
