

Table

**Solely for the purposes of Article 21 of the Paris Agreement, information
on the most up-to-date total and per cent of greenhouse gas emissions
communicated by Parties to the Convention in their national communications,
greenhouse gas inventory reports, biennial reports or biennial update reports,
as of 12 December 2015**

<i>Party</i>	<i>Emissions (Gg CO₂ equivalent)</i>	<i>Percentage</i>	<i>Year</i>

* Countries that are member States of the European Union. The emissions of the European Union are 4 488 404 Gg in 2013, which represents the sum of the emissions of the Member States of the European Union in this table, and corresponds to a share of 12.10%. The emissions of the European Union are not counted as additional to those of the member States.

Note: Data based on the most up-to-date amount communicated by the Parties to the Convention in their national communications, greenhouse gas inventory reports, biennial reports or biennial update reports. Since the communicated amounts by the Parties to the Convention in many cases did not include data on emissions by source and removals by sinks from land use, land-use change and forestry, or when included these emissions by source and removals by sink were estimated using different methodologies, these data were not included. Also, since the communicated amounts are for different years, the total amount provided in this table should be used solely for the limited purposes of Article 21 as it does not represent an accurate estimate of global greenhouse gas emissions.
