

Adaptation to climate change and risk management in Peru

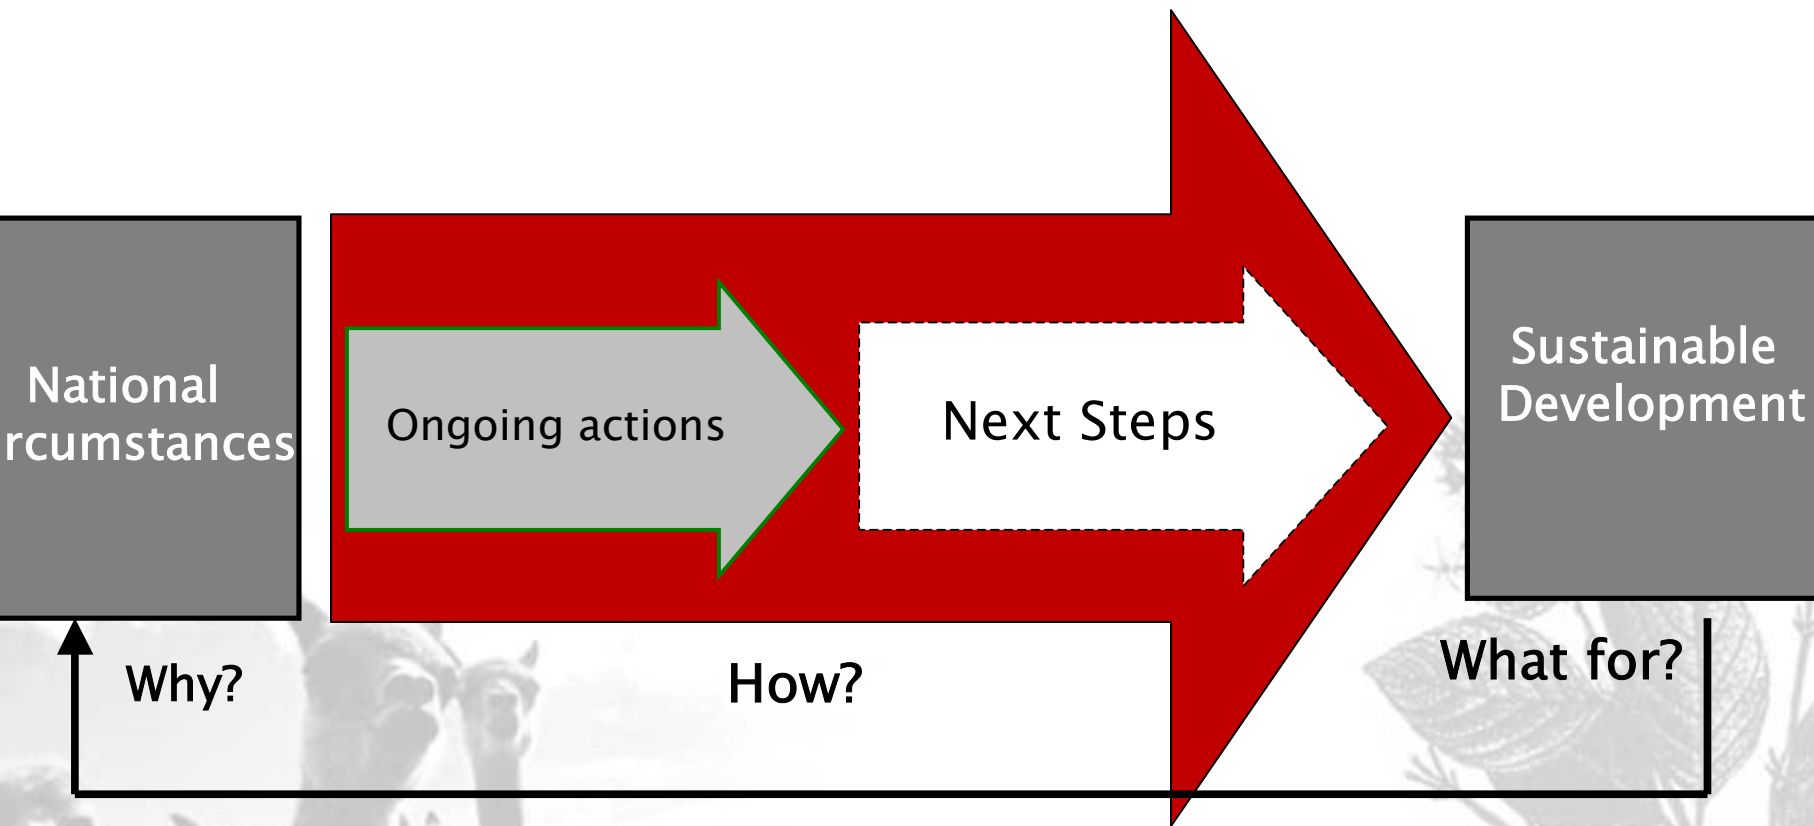

AWG-LCA

In session workshop: “Risk management and risk reduction strategies, including risk sharing and transfer mechanisms such as insurance”

Poznan, December 2008

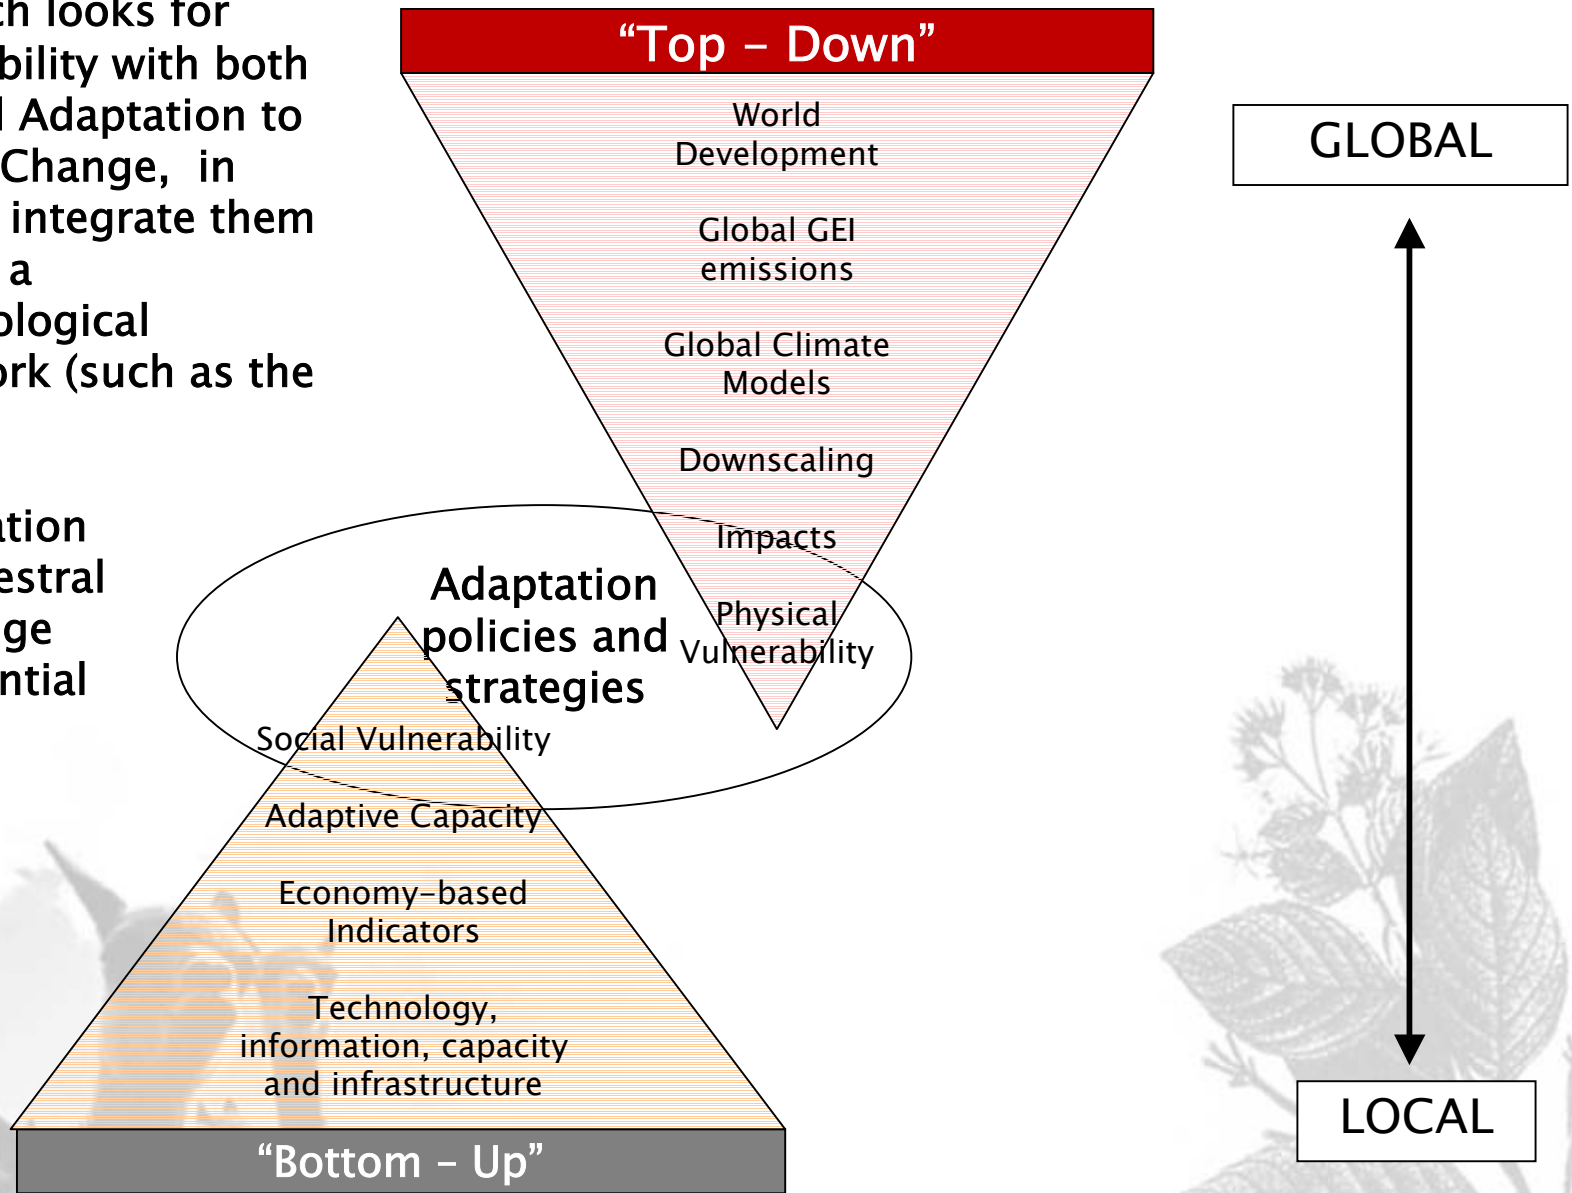

Peru's general approach to CC

Climate change as a priority

Approach looks for compatibility with both DRR and Adaptation to Climate Change, in order to integrate them through a methodological framework (such as the APF)

Participation and ancestral knowledge are essential

Towards a national adaptation strategy

Vulnerability reduction and adaptation as development goals

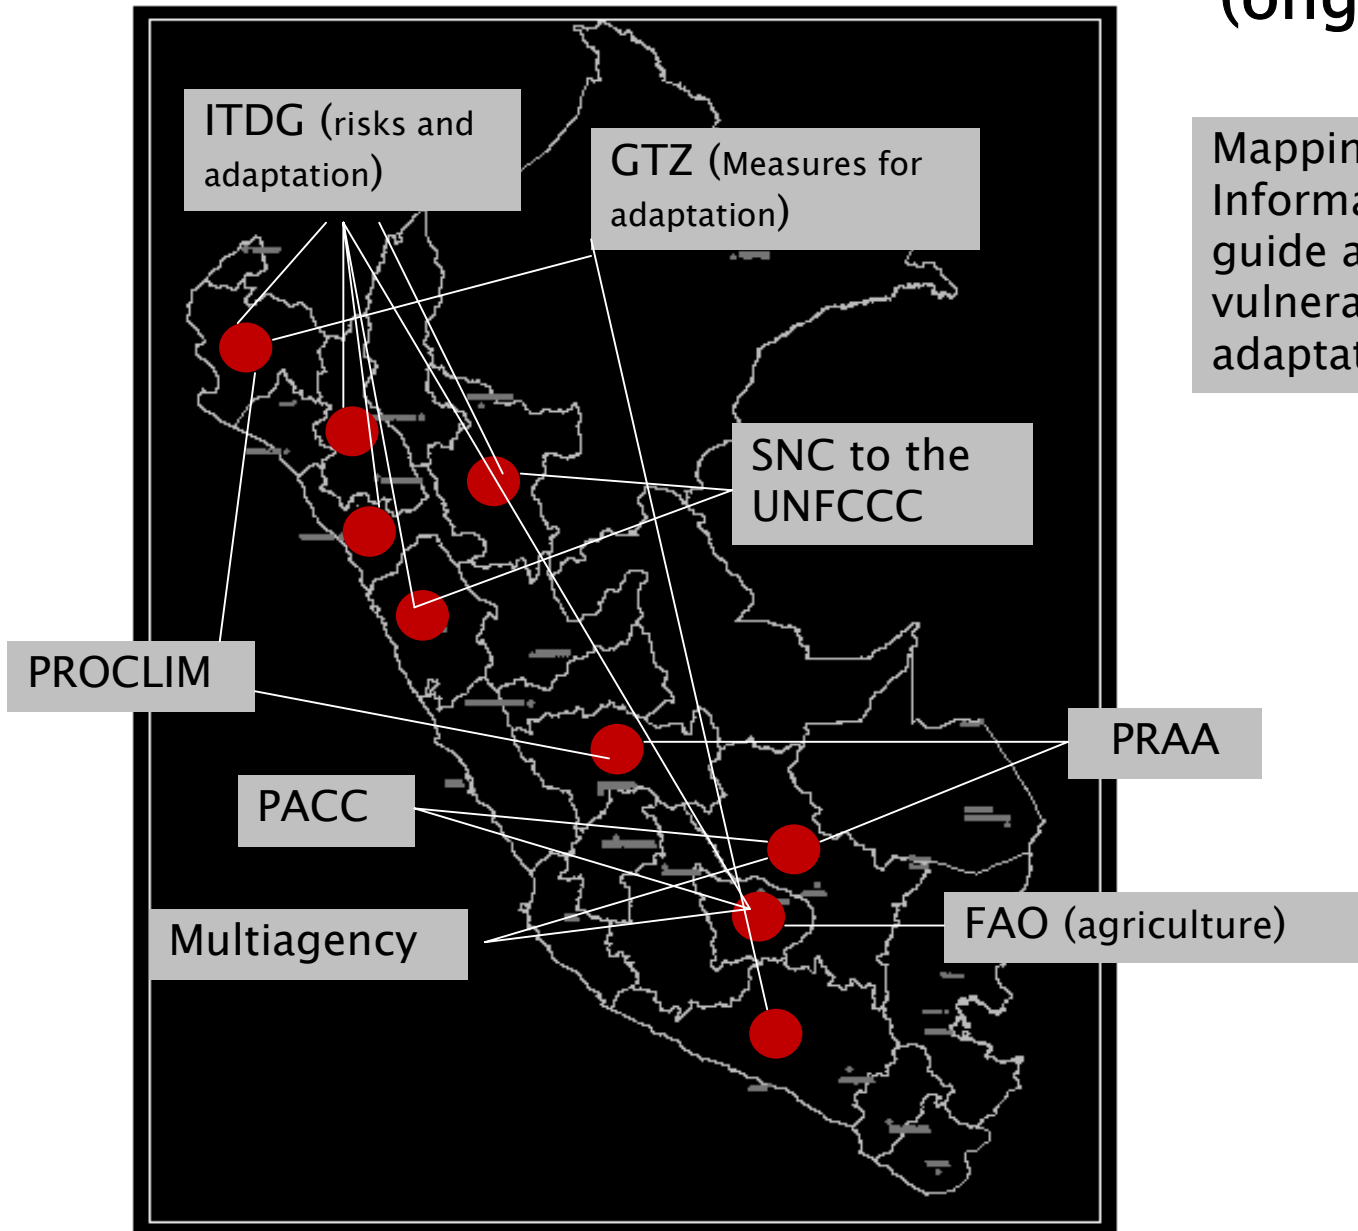

- Priority for most vulnerable populations, territories and sectors
- Development of consistent information (including the cost of impacts) through vulnerability indexes for resource allocation instruments
- Development and follow up of basic information systems

Tools and instruments for regional and sectoral development planning

Implementing Adaptation

- Environmental and economic planning and zoning
- Adaptation programs and projects

Applying the approach: adaptation initiatives in Peru (ongoing actions)

Mapping vulnerabilities:
Information and tools to
guide a national
vulnerability reduction and
adaptation policy

Next steps: climate change into national development and international LCA

- From local experience to international solutions
 - Article 6 related activities:
 - Identification of key stakeholders
 - What to communicate and how
 - Cooperation that is both flexible and oriented toward national priorities
- Information, instruments and tools
 - Policy framework for private and public research, development and investment
 - DRR approach and Tools for risk sharing and transfer (insurance)
 - Resources allocation model

International community

National government

Sectors / Regions
