

Information on the quantified emission limitation or reduction objective (QELRO) for Norway

“A range of QELRO`s from 81-84 is consistent with the Norwegian target of 30% reduction of emissions by 2020, compared to 1990, including the effect of changes in rules decided in Durban, and changes in relevant assumptions .” (2013-2020)

On 2020 target

- In 2007, Norway put forward a target of 30% reduction of emissions by 2020, compared to 1990, with certain background assumptions (*FCCC/KP/AWG/2010/INF.2/Rev.1*).
- Norway will move to a level of 40% reduction for 2020 as part of a global and comprehensive agreement for the period beyond 2012 where major emitting Parties agree on emission reductions in line with the 2 degree Celsius target (letter of association with the Copenhagen Accord)
- In the Kyoto context, these conditions are not fulfilled.
- In the submission, information is therefore given relative to an emission reduction of 30% by 2020, compared to 1990

Consequences - Durban decisions and assumptions

- GWP: - 0.7 % in 2020
- NF3: 0 %
- Reporting Guidelines: 0%
- Art. 3.4: -0.55%
 - Harvested Wood Products 0% effectively
- Assumptions: Art. 3.3 and 3.4: 6 % (3 Mt) → 4% (2 Mt)

Estimation of range
