

Towards the implementation of the Technology Mechanism

**Climate Technology Centre and Network: Governance
structure and terms of reference**

Bangkok , 4th April 2011

- **EU objective:** working towards making the Technology Mechanism operational in 2012; Reach a decision in Durban / COP 17- as part of a balanced, coherent and effective package

Need a common understanding of the heart and engine of the Technology Mechanism

- How can we (the UNFCCC) promote/ enhance Development and Transfer of Technology (DTT) action on the ground and what are the arrangements to support that?
- How do we see the roles of the different actors?

CTC ToR...in line with the functions outlined in para.123 of the Cancun Agreements

- **The ToR should focus on how to facilitate the Network and manage information.**
- **Collect and maintain information on the Network members:**
 - Collect and receive nominations
 - Set up and maintain database, web-based networking and registration tools
 - Seek memberships amongst relevant existing organisations
 - Promote and stimulate cooperation between the members of the Network
- **Information and reporting on activities:** engagement with Network members
- **Disseminate information on Network members**

The CTC team and structure aligned with its functions

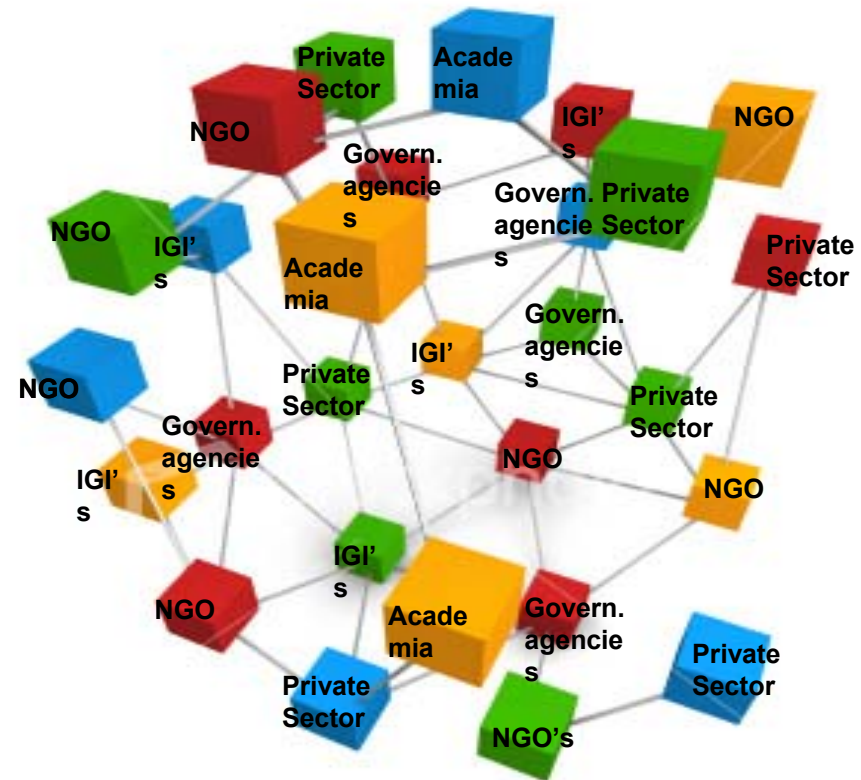

- **Small Team**
- **Clear and effective structure**
- **Cost –efficiency**

The key role of the network

- **Advice and support** for identifying technology needs and implementing technologies on the ground;
- Support **networking** and capacity building for developing countries;
- Stimulate technology development and transfer e.g. through public and private **collaborations** at all levels;
- Dissemination of good policies and best **practices** for technology planning and diffusion.
- The Network should be open to applications and draw from **existing public and private institutions**
- Help **improve the quality of projects** to make them more fundable;
- **Can make information available** for the identification of potential funding sources, as appropriate

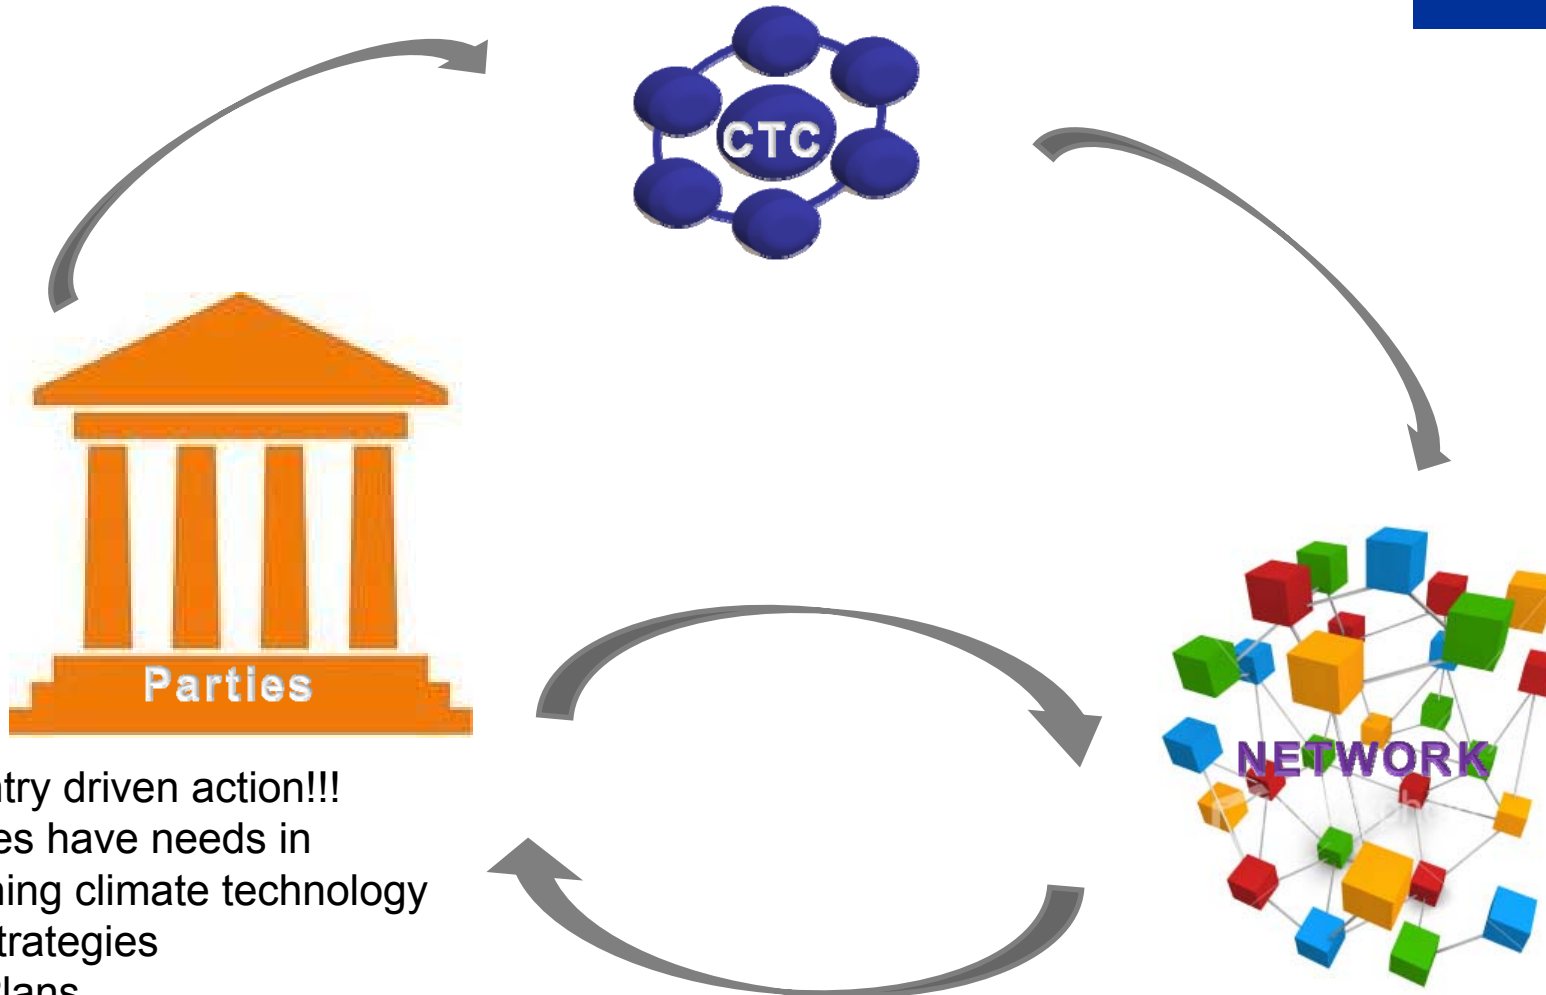

Promoting DTT action on the ground

- Country-driven action based on national circumstances and priorities
- CTC **catalyzes action** in developing countries by facilitating information and access to a network of organizations and initiatives
- CTC connects institutions and makes information available on them with the purpose to:
 - Facilitate/enhance** action on DTT in support of action on mitigation and adaptation
 - **Stimulate** North-South, South-South cooperation
- CTC can provide information on the organisations and initiatives but **Parties** will have the final decision on the partnerships for collaboration

The country-driven approach

Country driven action!!!
Parties have needs in
defining climate technology

- strategies
- Plans
- programmes
- projects
