

SBSTA Agenda 7

Mr. Chair, AOSIS looks forward to discussions on the review of the long term global temperature goal, with a view to enhancing this goal to a limit of temperature increases to below 1.5 degrees above pre-industrial levels. This is an important issue to my group as a result of the sharply increased impacts SIDS will see at incrementally greater temperature increases.

Mr Chair, AOSIS thinks it is essential that information flow directly from the SED to the ADP process. to this end, we believe it is important for the SED to present an update report directly to the ADP process on both the progress and the substance of its work, as this scientific information is directly relevant to the level of ambition that is needed from the 2015 agreement.
