UNEP's GEO Data Portal

The GEO Data Portal is the authoritative source for data sets used by UNEP and its partners in the Global Environment Outlook (GEO) report and other integrated environment assessments.

UNEP's GEO Data Portal

Main target group

*those working on the GEO assessment and report
(UNEP/DEWA, GEO Collaborating Centres, reviewers
and editors)*

UNEP's GEO Data Portal

Basic functions

- filtering for authoritative data sources*
- aggregation of data/indicator for GEO regions (7) and sub-regions (21)*
- data visualization and exploration for basic analysis, graphics production and capacity development*

UNEP's GEO Data Portal

Simple, easy and light system with basic functions to explore the data through maps, graphs & tables, compare countries-regions-world, histograms etc; download in popular formats and copy&paste in word processors.

UNEP's GEO Data Portal

Based on agreements and collaboration with many primary UN & other data providers e.g.:

- ***UN Statistics Division***
- ***OECD***
- ***WHO***
- ***FAO***
- ***World Bank***
- ***.....***

UNEP's GEO Data Portal

Data gaps & needs taken up in GEO Data Working Group, and interagency networks such as Intersecretariat Working Group on Environment Statistics (IWG-Env), Committee for Coordination of Statistical Activities (CCSA) and others.

UNEP's GEO Data Portal

The database holds over 500 data/indicator trend variables (stats, maps) for countries, GEO (sub-) regions and the world, identified on the basis of a 'core data list' developed as part of the GEO process and covering environmental and socio-economic domains.

UNEP's GEO Data Portal

*Produce on-the-fly maps, graphs, tables, histograms.
See the metadata. Download the variables in different
formats.*

The GEO Data Portal is the authoritative source for **data sets** used by UNEP and its partners in the Global Environment Outlook (GEO) report and other integrated environment assessments. Its **online database** holds more than **450 different variables**, as national, subregional, regional and global statistics or as geospatial data sets (maps), covering themes like Freshwater, Population, Forests, Emissions, Climate, Disasters, Health and GDP. Display them on-the-fly as **maps**, **graphs**, **data tables** or download the data in different formats.

Title:	Fish Catch - Marine
Publication year:	Apr 2007
Data set type:	National
Spatial presentation form:	textTable
Units:	Metric Tons
Filename:	fish_catch_marine

Definitions: Fish catch data relate to nominal catch of fish (FAOSTAT categories: demersal marine fish, pelagic marine fish, marine fish not elsewhere included, freshwater and diadromous fish), taken for commercial, industrial, recreational and subsistence purposes from marine waters. The harvest from mariculture, aquaculture and other kinds of fish farming is excluded. Data include all quantities caught and landed for both food and feed purposes but exclude discards. Catches of fish are expressed in live weight, that is the nominal weight of the aquatic organisms at the time of capture. To assign nationality to catches, the flag of the fishing vessel is used, unless the wording of chartering and joint operation contracts indicates otherwise.

Abstract: Fish, crustaceans, molluscs and all other aquatic organisms included in the FishStat Plus database have been classified according to approximately 1290 commercial species items, further arranged within the 50 groups of species constituting the nine divisions of the FAO International Standard Statistical Classification of Aquatic Animals and Plants (ISSCAAP). According to the inland or marine area where caught, capture production is also classified into eight major inland fishing areas and 19 major marine fishing areas, internationally established for fishery statistical purposes. Several countries still report their catches by large groups of species. In these circumstances the catch data presented by individual species items are likely to be underestimated. Therefore, when the statistics are examined for a particular species, it should be noted that an unknown proportion of the catches for that species might have been reported by the national office under the generic, family or order name of the species, or even more roughly as "marine fishes unspecified". Consequently, species-item totals frequently underestimate the real catch of the individual species.

Purpose: The FAO Fisheries and Aquaculture Department provides advice and objective information to Members to help promote responsible aquaculture and fisheries. To fulfil this role, the Department compiles, analyses and disseminates fishery data, structured within data collections. FAO is acutely aware of the fundamental social and economic role played by the fisheries sector in: Meeting global and national sustainable food security. Providing self and paid employment for fishing communities as a means of alleviating poverty in fishing communities and stemming rural/urban drift. level
