# National Inventory Report 1990-2014: Greenhouse Gas Sources and Sinks in Canada

Canada's Submission to the United Nations  
Framework Convention on Climate Change

1990–2014

Part 3

Canada

Canada

Main entry under title:

National Inventory Report 1990–2014: Greenhouse Gas Sources and Sinks in Canada

Annual

1990/2014

Issued by the Pollutant Inventories and Reporting Division

Other editions available: Rapport d'inventaire national 1990–2014 : Sources et puits de gaz à effet de serre au Canada

Continues: Canada's Greenhouse Gas Inventory.

This document is available on Environment Canada's web site at <http://www.ec.gc.ca/ges-ghg/>

1. Greenhouse gases—Canada—Measurement—Periodicals
  2. Methane—Environmental aspects—Canada—Periodicals
  3. Nitrous oxide—Environmental aspects—Canada—Periodicals
  4. Carbon dioxide—Environmental aspects—Canada—Periodicals
  5. Pollution—Canada—Measurement—Periodicals
- I. Canada. Environment Canada.
- II. Pollutant Inventories and Reporting Division.
- III. Title.
- IV. Title: Greenhouse gas sources and sinks in Canada.

# Annex 8

## Rounding Protocol

A rounding protocol has been developed for the emission and removal estimates in order to reflect their uncertainty levels. The accuracy of a value is reflected by presenting the emission and removal estimates rounded to an appropriate number of significant figures based on the uncertainty of the category in question. The number of significant figures to which each source and sink category has been rounded, using the rounding rules provided in this protocol, can be found in Table A8-1.

A large number of the uncertainty ranges that are used for the various categories were developed using Monte Carlo analysis, as performed by ICF Consulting (ICF Consulting 2004, 2005), using the 2001 inventory estimates submitted in the NIR 2003. Default uncertainty values published by the IPCC (IPCC/OECD/IEA 1997; IPCC 2001; IPCC 2006) and those resulting from expert elicitation were also utilized for some ranges. Since 2004-2005, many methodological changes, refinements and updates, including updates to the uncertainty parameters themselves, have been made. The uncertainty ranges have been calculated around the mean values established by these analyses.

For a more complete description of the analysis of uncertainty in Canada's emission estimates, please refer to Annex 2, which includes tables of current uncertainty values. Recent updates to uncertainty estimates are provided in the respective sectoral chapters.

The following uncertainty values have been used to establish the number of significant figures to which the estimates have been rounded:

- uncertainty greater than 50%: one significant figure;
- uncertainty between 10% and 50%: two significant figures; and
- uncertainty less than 10%: three significant figures.

All calculations, including the summing of emission totals, were made using unrounded data. The rounding protocol was applied only after the calculations had been completed. The reader should also note that formatting in this report limits the maximum number of decimal places and, therefore, even though a zero entry is recorded, some emissions may exist in that category (zero emissions are identified with a dash "-"). Because of these procedures, individual values in the emission tables may not add up to the subtotals and/or overall totals.

**Table A8–1 Number of Significant Figures Applied to GHG Summary Tables**

| Greenhouse Gas Categories   | CO <sub>2</sub> | CH <sub>4</sub> | N <sub>2</sub> O | HFCs     | PFCs     | SF <sub>6</sub> | NF <sub>3</sub> | TOTAL    |
|---|-----------------|-----------------|------------------|----------|----------|-----------------|-----------------|----------|

| f. Harvested Wood Products  |                 | 2               |                  |          |          |                 |                 | 2        |

# Annex 9

## Canada's Greenhouse Gas Emission Tables by IPCC Sector, 1990–2014

In this National Inventory Report, emission estimates are primarily presented for each of the activity sectors defined by the Intergovernmental Panel on Climate Change (IPCC): Energy, Industrial Processes and Product Use, Agriculture, Land Use, Land-use Change and Forestry, and Waste. This is consistent with the categorization outlined in the UNFCCC reporting guidelines on annual inventories for Parties included in Annex I to the Convention (Decision 24/CP.19).<sup>1</sup>

This annex contains summary tables (Table A9–1 to Table A9–27) illustrating national GHG emissions by year, by gas and by IPCC sector. National GHG emissions allocated to Canadian economic sectors are provided in Annex 10 of this report.

Canada's greenhouse gas emission tables are also available in various file formats online at <http://www.open.canada.ca>.

**Table A9-1 GHG Source/Sink Category Description**

| GHG Source/Sink Categories  |  |
|---|--|
| <b>ENERGY</b>   |  |
| a. Stationary Combustion Sources  | Emissions from fuel consumed by utility electricity generation and steam production (for sale)   |
| Public Electricity and Heat Production  | Emissions from fuel consumed by petroleum refining industries  |
| Petroleum Refining Industries   | Emissions from fuel consumed by mining and upstream oil and gas production   |
| Mining and Upstream Oil and Gas Production  | <ul style="list-style-type: none"> <li>- Metal and non-metal mines, coal mines, stone quarries, and gravel pits</li> <li>- Oil and gas extraction industries</li> <li>- Mineral exploration and contract drilling operations</li> </ul>  |
| Manufacturing Industries  | <ul style="list-style-type: none"> <li>Emissions from fuel consumed by the following industries:</li> <li>- Iron and Steel (steel foundries, casting and rolling mills)</li> <li>- Non-ferrous metals (aluminium, magnesium and other production)</li> <li>- Chemical (fertilizer manufacturing, organic and inorganic chemical manufacturing)</li> <li>- Pulp and Paper (primarily pulp, paper, and paper product manufacturers)</li> <li>- Cement and other non-metallic mineral production</li> <li>- Other manufacturing industries not listed (such as automobile manufacturing, textiles, food and beverage industries)</li> </ul> |
| Construction  | Emissions from fuels consumed by the construction industry – buildings, highways etc.  |
| Commercial & Institutional  | <ul style="list-style-type: none"> <li>Emissions from fuel consumed by:</li> <li>- Service industries related to mining, communication, wholesale and retail trade, finance and insurance, real estate, education, etc.)</li> <li>- Federal, provincial and municipal establishments</li> <li>- National Defence and Canadian Coast Guard</li> <li>- Train stations, airports and warehouses</li> </ul>  |
| Residential   | Emissions from fuel consumed for personal residences (homes, apartment hotels, condominiums and farm houses)   |
| Agriculture & Forestry  | <ul style="list-style-type: none"> <li>Emissions from fuel consumed by:</li> <li>- Forestry and logging service industry</li> <li>- Agricultural, hunting and trapping industry (excluding food processing, farm machinery manufacturing, and repair)</li> </ul>   |
| b. Transportation   | Emissions resulting from the:  |
| Domestic Aviation   | - Consumption of fossil fuels by aircrafts flying domestically with Canadian purchased fuel  |
| Road Transportation   | - Consumption of fossil fuels (including non-CO <sub>2</sub> emissions from ethanol and biodiesel) by vehicles licensed to operate on roads  |
| Railways  | - Consumption of fossil fuels (including non-CO <sub>2</sub> emissions from biodiesel) by Canadian railways  |
| Domestic Navigation   | - Consumption of fossil fuels (including non-CO <sub>2</sub> emissions from ethanol and biodiesel) by Canadian registered marine vessels fuelled domestically  |
| Others – Off-road   | - Consumption of fossil fuels (including non-CO <sub>2</sub> emissions from ethanol and biodiesel) by combustion devices not licensed to operate on roads  |
| Others – Pipeline Transport   | - Transportation and distribution of crude oil, natural gas and other products   |
| c. Fugitive Sources   | Intentional and unintentional releases of greenhouse gases from the following activities:  |
| Coal Mining   | - Underground and surface mining, abandoned underground coal mines   |
| Oil and Natural Gas   | - Conventional and unconventional oil and gas exploration, production, transportation, and distribution  |
| d. CO <sub>2</sub> Transport and Storage  | Intentional and unintentional releases of greenhouse gases from the transport and storage of carbon dioxide  |
| <b>INDUSTRIAL PROCESSES AND PRODUCT USE</b>                                       |  |
| a. Mineral Products   | Emissions resulting from the following process activities:   |
| b. Chemical Industry  | - Production of cement and lime; use of soda ash, limestone & dolomite, and magnesite  |
| c. Metal Production   | - Production of ammonia, nitric acid, adipic acid, carbide, carbon black, ethylene dichloride, ethylene, methanol and styrene  |
| d. Production and Consumption of Halocarbons, SF <sub>6</sub> and NF <sub>3</sub> | - Aluminum production, iron and steel production, magnesium production and casting   |
| e. Non-Energy Products from Fuels and Solvent Use                                 | - By-product production of HFC-23; use of HFCs and/or PFCs in air conditioning units, refrigeration units, fire extinguishers, aerosol cans, solvents, foam blowing, semiconductor manufacturing and electronics industry; use of SF <sub>6</sub> and NF <sub>3</sub> in semiconductor manufacturing   |
| f. Other Product Manufacture and Use  | - Non-energy use of fossil fuels (including solvents and lubricants) that are not accounted for elsewhere under the Industrial Processes and Product Use Sector  |
|   | - Use of N <sub>2</sub> O as an anaesthetic and propellant; use of urea in selective catalytic reduction (SCR) equipped vehicles; use of SF <sub>6</sub> and PFCs in electrical equipment  |
| <b>AGRICULTURE</b>  |  |
| a. Enteric Fermentation   | Emissions resulting from the:  |
| b. Manure Management  | - Eruption of CH <sub>4</sub> during the digestion of plant material by (mainly) ruminants   |
| c. Agricultural Soils   | <ul style="list-style-type: none"> <li>- Release of CH<sub>4</sub> and N<sub>2</sub>O due to microbial activity during the storage of feces, urine and bedding materials from the cleaning of barns and pens</li> <li>- Indirect N<sub>2</sub>O emissions from volatilization and leaching of nitrogen from animal manure during storage</li> </ul>  |
| Direct sources  | - Direct N <sub>2</sub> O emissions from Synthetic fertilizer, manure on cropland, pasture range and paddock, crop residue, tillage, summer-fallow, irrigation and cultivation of organic soils  |
| Indirect Sources  | - Indirect N <sub>2</sub> O emissions from volatilization and leaching of animal manure nitrogen, synthetic fertilizer nitrogen and crop residue nitrogen  |
| d. Field Burning of Agricultural Residues   | - CH <sub>4</sub> and N <sub>2</sub> O emissions from crop residue burning   |
| e. Liming, Urea Application and Other Carbon-containing Fertilizers               | - Direct emissions of CO <sub>2</sub> from the application of lime, urea and other fertilizers containing carbon   |
| <b>WASTE</b>  |  |
| a. Solid Waste Disposal   | Emissions resulting from:  |
| b. Biological Treatment of Solid Waste  | - Municipal solid waste management sites (landfills) and dedicated wood waste landfills  |
| c. Wastewater Treatment and Discharge   | - Composting of municipal solid waste  |
| d. Incineration and Open Burning of Waste   | - Domestic and industrial wastewater treatment   |
|   | - Municipal solid, hazardous and clinical waste, and sewage sludge incineration  |
| <b>LAND USE, LAND-USE CHANGE AND FORESTRY</b>                                     |  |
| a. Forest Land  | Emissions and removals resulting from:   |
| b. Cropland   | - Managed forests and lands converted to forests; includes growth, natural and anthropogenic disturbances (fire, harvest, insects)   |
| c. Grassland  | - Management practices on lands in annual crops, summer-fallow and perennial crops (forage, specialty crops, orchards); immediate and residual emissions from lands converted to cropland  |
| d. Wetlands   | - Managed agricultural grassland   |
| e. Settlements  | - Peatlands disturbed for peat extraction, or land flooded from hydro reservoir development  |
| f. Harvested Wood Products  | - Forest and grassland converted to built-up land (settlements, transport infrastructure, oil & gas infrastructure, mining, etc); urban tree growth  |
|   | - Use and disposal of harvested wood products manufactured from wood coming from forest harvest and forest conversion activities in Canada   |

Notes:

- National totals exclude all GHGs from the Land Use, Land-use Change and Forestry Sector.
- Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.
- HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HFC production (HFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.
- Indicates no emissions
- Indicates emissions truncated due to rounding
- Estimates for the latest year (2014) are based on preliminary energy data; these data, though the best available information at the time of publication, are subject to revision in the next submission year.
- National GHG emissions allocated to Canadian economic sectors are provided in Annex 10 of this report.

**Table A9–3 2014 GHG Emission Summary for Canada**

| Greenhouse Gas Categories  |                          | Greenhouse Gases |                 |                        |                  |                        |                        |                        |                        |                        |                        |

Notes:

1. National totals exclude all GHGs from the Land Use, Land-use Change and Forestry Sector.
2. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.
3. HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HFC production (HFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CFC<sub>4</sub> emissions from the use of NF<sub>3</sub>.
4. IPCC's *Fourth Assessment Report* provides global warming potentials (GWPs) for the various species of HFCs and PFCs. Chapter 1, Table 1-1 of this report provides a list of GWPs used.
- Indicates no emissions.
- 0.0 Indicates emissions truncated due to rounding.
- Estimates for the latest year (2014) are based on preliminary energy data; these data, though the best available information at the time of publication, are subject to revision in the next submission year.
- National GHG emissions allocated to Canadian economic sectors are provided in Annex 10 of this report.

Notes:

- National totals exclude all GHGs from the Land Use, Land-use Change and Forestry Sector.
- Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.
- HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CFC emissions from the use of NF<sub>3</sub>.
- IPCC's *Fourth Assessment Report* provides global warming potentials (GWPs) for the various species of HFCs and PFCs. Chapter 1, Table 1-1 of this report provides a list of GWPs used.
- Indicates no emissions
- 0.0 Indicates emissions truncated due to rounding
- National GHG emissions allocated to Canadian economic sectors are provided in Annex 10 of this report.

**Table A9–5 2012 GHG Emission Summary for Canada**

| Greenhouse Gas Categories  |  | Greenhouse Gases |                 |                        |                  |                        |                        |                        |                        |                        |                        |

## Notes:

1. National totals exclude all GHGs from the Land Use, Land-use Change and Forestry Sector.
2. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.
3. HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.
4. IPCC's *Fourth Assessment Report* provides global warming potentials (GWPs) for the various species of HFCs and PFCs. Chapter 1, Table 1-1 of this report provides a list of GWPs used.
- Indicates no emissions
- 0.0 Indicates emissions truncated due to rounding
- National GHG emissions allocated to Canadian economic sectors are provided in Annex 10 of this report.

A9

## Notes:

1. National totals exclude all GHGs from the Land Use, Land-use Change and Forestry Sector.
2. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.
3. HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.
4. IPCC's *Fourth Assessment Report* provides global warming potentials (GWPs) for the various species of HFCs and PFCs. Chapter 1, Table 1-1 of this report provides a list of GWPs used.
- Indicates no emissions
- 0.0 Indicates emissions truncated due to rounding
- National GHG emissions allocated to Canadian economic sectors are provided in Annex 10 of this report.

**Table A9-7 2010 GHG Emission Summary for Canada**

| Greenhouse Gas Categories  | Greenhouse Gases         |                 |                 |                  |                  |                   |                   |                 |                 |                |         |
|--|--------------------------|-----------------|-----------------|------------------|------------------|-------------------|-------------------|-----------------|-----------------|----------------|---------|
|  | Global Warming Potential |                 |                 | Unit             |                  |                   |                   |                 |                 |                |         |

## Notes:

1. National totals exclude all GHGs from the Land Use, Land-use Change and Forestry Sector.
2. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.
3. HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.
4. IPCC's *Fourth Assessment Report* provides global warming potentials (GWPs) for the various species of HFCs and PFCs. Chapter 1, Table 1-1 of this report provides a list of GWPs used.
- Indicates no emissions
- 0.0 Indicates emissions truncated due to rounding

Notes:

1. National totals exclude all GHGs from the Land Use, Land-use Change and Forestry Sector.
2. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.
3. HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.

4. IPCC's *Fourth Assessment Report* provides global warming potentials (GWPs) for the various species of HFCs and PFCs. Chapter 1, Table 1-1 of this report provides a list of GWPs used.

- Indicates no emissions

0.0 Indicates emissions truncated due to rounding

National GHG emissions allocated to Canadian economic sectors are provided in Annex 10 of this report.

**Table A9–9 2008 GHG Emission Summary for Canada**

| Greenhouse Gas Categories  |  | Greenhouse Gases |                 |                        |                  |                        |                        |                        |                        |                        |                        |     |

Notes:

- National totals exclude all GHGs from the Land Use, Land-use Change and Forestry Sector.
- Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.
- HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.
- IPCC's *Fourth Assessment Report* provides global warming potentials (GWP<sub>s</sub>) for the various species of HFCs and PFCs. Chapter 1, Table 1-1 of this report provides a list of GWP<sub>s</sub> used.
- Indicates no emissions
- 0.0 Indicates emissions truncated due to rounding
- National GHG emissions allocated to Canadian economic sectors are provided in Annex 10 of this report.

A9

**Table A9–10 2007 GHG Emission Summary for Canada**

| Greenhouse Gas Categories  |  | Greenhouse Gases |                 |                        |                  |                        |                        |                        |                        |                        |                        |

Notes:

1. National totals exclude all GHGs from the Land Use, Land-use Change and Forestry Sector.
2. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.
3. HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.
4. IPCC's *Fourth Assessment Report* provides global warming potentials (GWPs) for the various species of HFCs and PFCs. Chapter 1, Table 1-1 of this report provides a list of GWPs used.
- Indicates no emissions
- 0.0 Indicates emissions truncated due to rounding
- National GHG emissions allocated to Canadian economic sectors are provided in Annex 10 of this report.

**Table A9–11 2006 GHG Emission Summary for Canada**

| Greenhouse Gas Categories  |  | Greenhouse Gases |                 |                        |                  |                        |                        |                        |                        |                        |                        |

Notes:

- National totals exclude all GHGs from the Land Use, Land-use Change and Forestry Sector.
- Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.
- HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.
- IPCC's *Fourth Assessment Report* provides global warming potentials (GWPs) for the various species of HFCs and PFCs. Chapter 1, Table 1-1 of this report provides a list of GWPs used.
- Indicates no emissions
- 0.0 Indicates emissions truncated due to rounding
- National GHG emissions allocated to Canadian economic sectors are provided in Annex 10 of this report.

A9

**Table A9–12 2005 GHG Emission Summary for Canada**

Notes:

- National totals exclude all GHGs from the Land Use, Land-use Change and Forestry Sector.
- Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.
- HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.
- IPCC's *Fourth Assessment Report* provides global warming potentials (GWPs) for the various species of HFCs and PFCs. Chapter 1, Table 1-1 of this report provides a list of GWPs used.
- Indicates no emissions
- 0.0 Indicates emissions truncated due to rounding
- National GHG emissions allocated to Canadian economic sectors are provided in Annex 10 of this report.

**Table A9–13 2004 GHG Emission Summary for Canada**

## Notes:

1. National totals exclude all GHGs from the Land Use, Land-use Change and Forestry Sector.
2. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.
3. HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.
4. IPCC's *Fourth Assessment Report* provides global warming potentials (GWPs) for the various species of HFCs and PFCs. Chapter 1, Table 1-1 of this report provides a list of GWPs used.
- Indicates no emissions
- 0.0 Indicates emissions truncated due to rounding
- National GHG emissions allocated to Canadian economic sectors are provided in Annex 10 of this report.

A9

**Table A9–14 2003 GHG Emission Summary for Canada**

Notes:

- National totals exclude all GHGs from the Land Use, Land-use Change and Forestry Sector.
- Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.
- HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.
- IPCC's *Fourth Assessment Report* provides global warming potentials (GWPs) for the various species of HFCs and PFCs. Chapter 1, Table 1-1 of this report provides a list of GWPs used.
- Indicates no emissions
- 0.0 Indicates emissions truncated due to rounding
- National GHG emissions allocated to Canadian economic sectors are provided in Annex 10 of this report.

**Table A9–15 2002 GHG Emission Summary for Canada**

## Notes:

1. National totals exclude all GHGs from the Land Use, Land-use Change and Forestry Sector.
  2. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.
  3. HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.
  4. IPCC's *Fourth Assessment Report* provides global warming potentials (GWPs) for the various species of HFCs and PFCs. Chapter 1, Table 1-1 of this report provides a list of GWPs used.
  - Indicates no emissions
  - 0.0 Indicates emissions truncated due to rounding
- National GHG emissions allocated to Canadian economic sectors are provided in Annex 10 of this report.

A9

**Table A9–16 2001 GHG Emission Summary for Canada**

Notes:

1. National totals exclude all GHGs from the Land Use, Land-use Change and Forestry Sector.

2. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.

3. HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HFC production (HFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.4. IPCC's *Fourth Assessment Report* provides global warming potentials (GWPs) for the various species of HFCs and PFCs. Chapter 1, Table 1-1 of this report provides a list of GWPs used.

- Indicates no emissions

0.0 Indicates emissions truncated due to rounding

National GHG emissions allocated to Canadian economic sectors are provided in Annex 10 of this report.

**Table A9–17 2000 GHG Emission Summary for Canada**

## Notes:

- National totals exclude all GHGs from the Land Use, Land-use Change and Forestry Sector.
- Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.
- HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CH<sub>4</sub> emissions from the use of NF<sub>3</sub>.
- IPCC's *Fourth Assessment Report* provides global warming potentials (GWP<sub>s</sub>) for the various species of HFCs and PFCs. Chapter 1, Table 1-1 of this report provides a list of GWP<sub>s</sub> used.
- Indicates no emissions
- 0.0 Indicates emissions truncated due to rounding
- National GHG emissions allocated to Canadian economic sectors are provided in Annex 10 of this report.

**Table A9–18 1999 GHG Emission Summary for Canada**

| Greenhouse Gas Categories  |  | Greenhouse Gases |                 |                        |                  |                        |                        |                        |                        |                        |                        |

Notes:

1. National totals exclude all GHGs from the Land Use, Land-use Change and Forestry Sector.
2. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.
3. HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.

4. IPCC's *Fourth Assessment Report* provides global warming potentials (GWP<sub>s</sub>) for the various species of HFCs and PFCs. Chapter 1, Table 1-1 of this report provides a list of GWP<sub>s</sub> used.

- Indicates no emissions

0.0 Indicates emissions truncated due to rounding

National GHG emissions allocated to Canadian economic sectors are provided in Annex 10 of this report.

**Table A9–19 1998 GHG Emission Summary for Canada**

Notes:

1. National totals exclude all GHGs from the Land Use, Land-use Change and Forestry Sector.
2. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.
3. HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CH<sub>4</sub> emissions from the use of NF<sub>3</sub>.
4. IPCC's Fourth Assessment Report provides global warming potentials (GWP<sub>s</sub>) for the various species of HFCs and PFCs. Chapter 1, Table 1-1 of this report provides a list of GWP<sub>s</sub> used.
- Indicates no emissions
- 0.0 Indicates emissions truncated due to rounding
- National GHG emissions allocated to Canadian economic sectors are provided in Annex 10 of this report.

A9

Notes:

1. National totals exclude all GHGs from the Land Use, Land-use Change and Forestry Sector.
2. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.
3. HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CH<sub>4</sub> emissions from the use of NF<sub>3</sub>.
4. IPCC's *Fourth Assessment Report* provides global warming potentials (GWP<sub>s</sub>) for the various species of HFCs and PFCs. Chapter 1, Table 1-1 of this report provides a list of GWP<sub>s</sub> used.
- Indicates no emissions
- 0.0 Indicates emissions truncated due to rounding
- National GHG emissions allocated to Canadian economic sectors are provided in Annex 10 of this report.

**Table A9–21 1996 GHG Emission Summary for Canada**

## Notes:

1. National totals exclude all GHGs from the Land Use, Land-use Change and Forestry Sector.
2. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.
3. HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.
4. IPCC's *Fourth Assessment Report* provides global warming potentials (GWP<sub>s</sub>) for the various species of HFCs and PFCs. Chapter 1, Table 1-1 of this report provides a list of GWP<sub>s</sub> used.
- Indicates no emissions
- 0.0 Indicates emissions truncated due to rounding
- National GHG emissions allocated to Canadian economic sectors are provided in Annex 10 of this report.

A9

## Notes:

- National totals exclude all GHGs from the Land Use, Land-use Change and Forestry Sector.
- Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.
- HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CH<sub>4</sub> emissions from the use of NF<sub>3</sub>.
- IPCC's *Fourth Assessment Report* provides global warming potentials (GWP<sub>s</sub>) for the various species of HFCs and PFCs. Chapter 1, Table 1-1 of this report provides a list of GWP<sub>s</sub> used.
- Indicates no emissions
- 0.0 Indicates emissions truncated due to rounding
- National GHG emissions allocated to Canadian economic sectors are provided in Annex 10 of this report.

**Table A9–23 1994 GHG Emission Summary for Canada**

| Greenhouse Gas Categories  |                               | Greenhouse Gases |                 |                        |                  |                        |                        |                        |                        |                        |                        |

Notes:

1. National totals exclude all GHGs from the Land Use, Land-use Change and Forestry Sector.
  2. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.
  3. HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.
  4. IPCC's *Fourth Assessment Report* provides global warming potentials (GWPs) for the various species of HFCs and PFCs. Chapter 1, Table 1-1 of this report provides a list of GWPs used.
  - Indicates no emissions
  - 0.0 Indicates emissions truncated due to rounding
- National GHG emissions allocated to Canadian economic sectors are provided in Annex 10 of this report.

A9

## Notes:

1. National totals exclude all GHGs from the Land Use, Land-use Change and Forestry Sector.
2. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.
3. HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.
4. IPCC's *Fourth Assessment Report* provides global warming potentials (GWPs) for the various species of HFCs and PFCs. Chapter 1, Table 1-1 of this report provides a list of GWPs used.
- Indicates no emissions
- 0.0 Indicates emissions truncated due to rounding
- National GHG emissions allocated to Canadian economic sectors are provided in Annex 10 of this report.

**Table A9–25 1992 GHG Emission Summary for Canada**

| Greenhouse Gas Categories  |      | Greenhouse Gases |                 |                        |                  |                        |                        |                        |                        |                        |                        |

Notes:

- National totals exclude all GHGs from the Land Use, Land-use Change and Forestry Sector.
- Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.
- HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CFC emissions from the use of NF<sub>3</sub>.
- IPCC's Fourth Assessment Report provides global warming potentials (GWPs) for the various species of HFCs and PFCs. Chapter 1, Table 1-1 of this report provides a list of GWPs used.
- Indicates no emissions
- 0.0 Indicates emissions truncated due to rounding
- National GHG emissions allocated to Canadian economic sectors are provided in Annex 10 of this report.

**Table A9–26 1991 GHG Emission Summary for Canada**

Notes:

1. National totals exclude all GHGs from the Land Use, Land-use Change and Forestry Sector.
  2. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.
  3. HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.
  4. IPCC's *Fourth Assessment Report* provides global warming potentials (GWP<sub>s</sub>) for the various species of HFCs and PFCs. Chapter 1, Table 1-1 of this report provides a list of GWP<sub>s</sub> used.
- Indicates no emissions  
 0.0 Indicates emissions truncated due to rounding  
 National GHG emissions allocated to Canadian economic sectors are provided in Annex 10 of this report.

**Table A9–27 1990 GHG Emission Summary for Canada**

| Greenhouse Gas Categories  |  | Greenhouse Gases |                 |                        |                  |                        |                        |                        |                        |                        |                        |

Notes:

1. National totals exclude all GHGs from the Land Use, Land-use Change and Forestry Sector.
2. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.
3. HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.
4. IPCC's *Fourth Assessment Report* provides global warming potentials (GWP<sub>s</sub>) for the various species of HFCs and PFCs. Chapter 1, Table 1-1 of this report provides a list of GWP<sub>s</sub> used.
- Indicates no emissions
- 0.0 Indicates emissions truncated due to rounding
- National GHG emissions allocated to Canadian economic sectors are provided in Annex 10 of this report.

# Annex 10

## Canada's Greenhouse Gas Emission Tables by Canadian Economic Sector, 1990–2014

This annex contains summary tables illustrating national GHG emissions for the period 1990–2014 by Canadian economic sector (Table A10–1) as well as the relationship (crosswalk) between the economic sectors and the Intergovernmental Panel on Climate Change (IPCC) sectors presented in Annex 9 of this report (Table A10–2).

Although not a mandatory reporting requirement, reallocating emissions from IPCC sectors to Canadian economic sectors is useful for the purpose of analyzing trends and policies, as most people associate GHG emissions with a particular economic activity (e.g. producing electricity, farming, or driving a car). This re-allocation simply re-categorizes emissions under different headings, but does not change the overall magnitude of Canadian emission estimates. Estimates for each economic sector includes emissions from energy-related and non energy related processes.

Canada's greenhouse gas emission tables are also available in various file formats online at <http://www.open.canada.ca>.

# Annex 11

## Provincial/Territorial Greenhouse Gas Emission Tables by IPCC Sector, 1990–2014

This annex contains summary tables (Table A11–1 to Table A11–28) illustrating GHG emissions (for GHG categories, see Table A11–1) by province/territory and year for each IPCC sector. To account for the creation of Nunavut in 1999, a time series from 1999–2014 is provided for both the Northwest Territories and Nunavut (Table A11–24 and Table A11–26), and the years 1990–1998 are presented as a combined region in Table A11–28.

Provincial/territorial GHG emissions allocated to Canadian economic sectors are provided in Annex 12 of this report.

Although the UNFCCC reporting guidelines require that only national-level detail be reported, provincial- and territorial-level detail is important, owing to the regional differences in emission levels and trends. Note that provincial and territorial emission estimates may not necessarily sum to the national totals due to rounding.

The reader should also note that many provinces develop independent inventories of provincial GHG emissions, in some cases making use of alternate methodologies, data inputs and/or inclusions/omissions of GHG source categories. While Canada is developing a national emissions inventory consistent with IPCC guidelines and international obligations, provincial governments may elect to develop an inventory structure in accordance with specific provincial needs. Environment and Climate Change Canada encourages collaboration with provinces and territories for quality assurance and continuous improvement of this annual National Inventory Report. The Department is striving to ensure consistency between different estimates, as some provincial/territorial GHG estimates presented in this report may differ from those developed by provincial/territorial governments.

Provincial/territorial greenhouse gas emission tables are also available in various file formats online at <http://www.open.canada.ca>.

**Table A11–1 GHG Source/Sink Category Description**

| GHG Source/Sink Categories                    |  |  |
|---|--|--|
| <b>ENERGY</b>                                 |  |  |
| a.  | Stationary Combustion Sources  |  |
|   | Public Electricity and Heat Production   | Emissions from fuel consumed by utility electricity generation and steam production (for sale)   |
|   | Petroleum Refining Industries  | Emissions from fuel consumed by petroleum refining industries  |
|   | Mining and Upstream Oil and Gas Production                                     | Emissions from fuel consumed by:<br>- Metal and non-metal mines, coal mines, stone quarries, and gravel pits<br>- Oil and gas extraction industries<br>- Mineral exploration and contract drilling operations  |
|   | Manufacturing Industries   | Emissions from fuel consumed by the following industries:<br>- Iron and Steel (steel foundries, casting and rolling mills)<br>- Non-ferrous metals (aluminium, magnesium and other production)<br>- Chemical (fertilizer manufacturing, organic and inorganic chemical manufacturing)<br>- Pulp and Paper (primarily pulp, paper, and paper product manufacturers)<br>- Cement and other non-metallic mineral production<br>- Other manufacturing industries not listed (such as automobile manufacturing, textiles, food and beverage industries) |
|   | Construction   | Emissions from fuels consumed by the construction industry – buildings, highways etc.  |
|   | Commercial & Institutional   | Emissions from fuel consumed by:<br>- Service industries related to mining, communication, wholesale and retail trade, finance and insurance, real estate, education, etc.)<br>- Federal, provincial and municipal establishments<br>- National Defence and Canadian Coast Guard<br>- Train stations, airports and warehouses  |
|   | Residential  | Emissions from fuel consumed for personal residences (homes, apartment hotels, condominiums and farm houses)   |
|   | Agriculture & Forestry   | Emissions from fuel consumed by:<br>- Forestry and logging service industry<br>- Agricultural, hunting and trapping industry (excluding food processing, farm machinery manufacturing, and repair)   |
|   | Residential  | Emissions from fuel consumed for personal residences (homes, apartment hotels, condominiums and farm houses)   |
|   | Agriculture & Forestry   | Emissions from fuel consumed by:<br>- Forestry and logging service industry<br>- Agricultural, hunting and trapping industry (excluding food processing, farm machinery manufacturing, and repair)   |
| b.  | Transportation   | Emissions resulting from the:  |
|   | Domestic Aviation  | - Consumption of fossil fuels by aircrafts flying domestically with Canadian purchased fuel  |
|   | Road Transportation  | - Consumption of fossil fuels (including non-CO <sub>2</sub> emissions from ethanol and biodiesel) by vehicles licensed to operate on roads  |
|   | Railways   | - Consumption of fossil fuels (including non-CO <sub>2</sub> emissions from biodiesel) by Canadian railways  |
|   | Domestic Navigation  | - Consumption of fossil fuels (including non-CO <sub>2</sub> emissions from ethanol and biodiesel) by Canadian registered marine vessels fuelled domestically  |
|   | Others – Off-road  | - Consumption of fossil fuels (including non-CO <sub>2</sub> emissions from ethanol and biodiesel) by combustion devices not licensed to operate on roads  |
|   | Others – Pipeline Transport  | - Transportation and distribution of crude oil, natural gas and other products   |
| c.  | Fugitive Sources   | Intentional and unintentional releases of greenhouse gases from the following activities:  |
|   | Coal Mining  | - Underground and surface mining, abandoned underground coal mines   |
|   | Oil and Natural Gas  | - Conventional and unconventional oil and gas exploration, production, transportation, and distribution  |
| d.  | CO <sub>2</sub> Transport and Storage  | Intentional and unintentional releases of greenhouse gases from the transport and storage of carbon dioxide  |
| <b>INDUSTRIAL PROCESSES AND PRODUCT USE</b>   |  |  |
| a.  | Mineral Products   | Emissions resulting from the following process activities:   |
| b.  | Chemical Industry  | - Production of cement and lime; use of soda ash, limestone & dolomite, and magnesite  |
| c.  | Metal Production   | - Production of ammonia, nitric acid, adipic acid, carbide, carbon black, ethylene dichloride, ethylene, methanol and styrene  |
| d.  | Production and Consumption of Halocarbons, SF <sub>6</sub> and NF <sub>3</sub> | - Aluminum production, iron and steel production, magnesium production and casting<br>- By-product production of HFC-23; use of HFCs and/or PFCs in air conditioning units, refrigeration units, fire extinguishers, aerosol cans, solvents, foam blowing, semiconductor manufacturing and electronics industry; use of SF <sub>6</sub> and NF <sub>3</sub> in semiconductor manufacturing   |
| e.  | Non-Energy Products from Fuels and Solvent Use                                 | - Non-energy use of fossil fuels (including solvents and lubricants) that are not accounted for elsewhere under the Industrial Processes and Product Use Sector  |
| f.  | Other Product Manufacture and Use  | - Use of N <sub>2</sub> O as an anaesthetic and propellant; use of urea in selective catalytic reduction (SCR) equipped vehicles; use of SF <sub>6</sub> and PFCs in electrical equipment  |
| <b>AGRICULTURE</b>                            |  |  |
| a.  | Enteric Fermentation   | Emissions resulting from the:  |
| b.  | Manure Management  | Eructation of CH <sub>4</sub> during the digestion of plant material by (mainly) ruminants<br>- Release of CH <sub>4</sub> and N <sub>2</sub> O due to microbial activity during the storage of feces, urine and bedding materials from the cleaning of barns and pens<br>- Indirect N <sub>2</sub> O emissions from volatilization and leaching of nitrogen from animal manure during storage   |
| c.  | Agricultural Soils   | Direct N <sub>2</sub> O emissions from Synthetic fertilizer, manure on cropland, pasture range and paddock, crop residue, tillage, summerfallow, irrigation and cultivation of organic soils   |
|   | Direct sources   | Indirect N <sub>2</sub> O emissions from volatilization and leaching of animal manure nitrogen, synthetic fertilizer nitrogen and crop residue nitrogen  |
|   | Indirect Sources   | CH <sub>4</sub> and N <sub>2</sub> O emissions from crop residue burning   |
| d.  | Field Burning of Agricultural Residues   | Direct emissions of CO <sub>2</sub> from the application of lime, urea and other fertilizers containing carbon   |
| e.  | Liming, Urea Application and Other Carbon-containing Fertilizers               |  |
| <b>WASTE</b>                                  |  |  |
| a.  | Solid Waste Disposal   | Emissions resulting from:<br>- Municipal solid waste management sites (landfills) and dedicated wood waste landfills   |
| b.  | Biological Treatment of Solid Waste  | - Composting of municipal solid waste  |
| c.  | Wastewater Treatment and Discharge   | - Domestic and industrial wastewater treatment   |
| d.  | Incineration and Open Burning of Waste   | - Municipal solid, hazardous and clinical waste, and sewage sludge incineration  |
| <b>LAND USE, LAND-USE CHANGE AND FORESTRY</b> |  |  |
| a.  | Forest Land  | Emissions and removals resulting from:<br>- Managed forests and lands converted to forests; includes growth, natural and anthropogenic disturbances (fire, harvest, insects)   |
| b.  | Cropland   | - Management practices on lands in annual crops, summerfallow and perennial crops (forage, specialty crops, orchards); immediate and residual emissions from lands converted to cropland   |
| c.  | Grassland  | - Managed agricultural grassland   |
| d.  | Wetlands   | - Peatlands disturbed for peat extraction, or land flooded from hydro reservoir development  |
| e.  | Settlements  | - Forest and grassland converted to built-up land (settlements, transport infrastructure, oil & gas infrastructure, mining, etc); urban tree growth  |
| f.  | Harvested Wood Products  | - Use and disposal of harvested wood products manufactured from wood coming from forest harvest and forest conversion activities in Canada   |

**Table A11–2 1990–2014 GHG Emission Summary for Newfoundland and Labrador**

| d.                        | Incineration and Open Burning of Waste  | -                             | -            | -             | -             | -             | -            | -            | -             |

Notes:

1. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.
2. Emissions from the Ammonia Production, Nitric Acid Production and Petrochemical Production and Carbon Black categories are included in Non-Energy Products from Fuels and Solvent Use within the provincial/territorial tables as CO<sub>2</sub> eq values.
3. HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.

- Indicates no emissions

0.0 Indicates emissions truncated due to rounding

x Indicates data has been suppressed to respect confidentiality

Estimates for the latest year (2014) are based on preliminary energy data; these data, though the best available information at the time of publication, are subject to revision in the next submission year.

Provincial/Territorial GHG emissions allocated to Canadian economic sectors are provided in Annex 12 of this report

**Table A11–3 2014 GHG Emission Summary for Newfoundland and Labrador**

| Greenhouse Gas Categories  |                          | Greenhouse Gases |                 |                        |                  |                        |                        |                        |                        |                        |                        |

Notes:

1. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.

2. Emissions from the Ammonia Production, Nitric Acid Production and Petrochemical Production and Carbon Black categories are included in Non-Energy Products from Fuels and Solvent Use within the provincial/territorial tables as CO<sub>2</sub> eq values.3. HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.4. IPCC's *Fourth Assessment Report* provides global warming potentials (GWPs) for the various species of HFCs and PFCs. Chapter 1, Table 1-1 of this report provides a list of GWPs used.

- Indicates no emissions

0.0 Indicates emissions truncated due to rounding

x Indicates data has been suppressed to respect confidentiality

Estimates for the latest year (2014) are based on preliminary energy data; these data, though the best available information at the time of publication, are subject to revision in the next submission year.

Provincial/Territorial GHG emissions allocated to Canadian economic sectors are provided in Annex 12 of this report

**Table A11–4 1990–2014 GHG Emission Summary for Prince Edward Island**

| Greenhouse Gas Categories |   | 1990                          | 2000         | 2005         | 2010         | 2011         | 2012         | 2013         | 2014         |

Notes:

1. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.

2. Emissions from the Ammonia Production, Nitric Acid Production and Petrochemical Production and Carbon Black categories are included in Non-Energy Products from Fuels and Solvent Use within the provincial/territorial tables as CO<sub>2</sub> eq values.3. HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.

- Indicates no emissions

0.0 Indicates emissions truncated due to rounding

x Indicates data has been suppressed to respect confidentiality

Estimates for the latest year (2014) are based on preliminary energy data; these data, though the best available information at the time of publication, are subject to revision in the next submission year.

Provincial/Territorial GHG emissions allocated to Canadian economic sectors are provided in Annex 12 of this report

**Table A11–5 2014 GHG Emission Summary for Prince Edward Island**

## Notes:

- Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.
- Emissions from the Ammonia Production, Nitric Acid Production and Petrochemical Production and Carbon Black categories are included in Non-Energy Products from Fuels and Solvent Use within the provincial/territorial tables as CO<sub>2</sub> eq values.
- HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.
- IPCC's *Fourth Assessment Report* provides global warming potentials (GWP<sub>s</sub>) for the various species of HFCs and PFCs. Chapter 1, Table 1-1 of this report provides a list of GWP<sub>s</sub> used.
- Indicates no emissions
- 0.0 Indicates emissions truncated due to rounding
- x Indicates data has been suppressed to respect confidentiality
- Estimates for the latest year (2014) are based on preliminary energy data; these data, though the best available information at the time of publication, are subject to revision in the next submission year.
- Provincial/Territorial GHG emissions allocated to Canadian economic sectors are provided in Annex 12 of this report

**Table A11–6 1990–2014 GHG Emission Summary for Nova Scotia**

## Notes:

- Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.
- Emissions from the Ammonia Production, Nitric Acid Production and Petrochemical Production and Carbon Black categories are included in Non-Energy Products from Fuels and Solvent Use within the provincial/territorial tables as CO<sub>2</sub> eq values.
- HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.

- Indicates no emissions

0.0 Indicates emissions truncated due to rounding

x Indicates data has been suppressed to respect confidentiality

Estimates for the latest year (2014) are based on preliminary energy data; these data, though the best available information at the time of publication, are subject to revision in the next submission year.

Provincial/Territorial GHG emissions allocated to Canadian economic sectors are provided in Annex 12 of this report

**Table A11–7 2014 GHG Emission Summary for Nova Scotia**

## Notes:

1. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.  
 2. Emissions from the Ammonia Production, Nitric Acid Production and Petrochemical Production and Carbon Black categories are included in Non-Energy Products from Fuels and Solvent Use within the provincial/territorial tables as CO<sub>2</sub> eq values.

3. HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.

4. IPCC's *Fourth Assessment Report* provides global warming potentials (GWP<sub>s</sub>) for the various species of HFCs and PFCs. Chapter 1, Table 1-1 of this report provides a list of GWP<sub>s</sub> used.  
 0.025 in

- Indicates no emissions

0.0 Indicates emissions truncated due to rounding

x Indicates data has been suppressed to respect confidentiality

Estimates for the latest year (2014) are based on preliminary energy data; these data, though the best available information at the time of publication, are subject to revision in the next submission year.

Provincial/Territorial GHG emissions allocated to Canadian economic sectors are provided in Annex 12 of this report

Notes:

1. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.  
 2. Emissions from the Ammonia Production, Nitric Acid Production and Petrochemical Production categories are included in Non-Energy Products from Fuels and Solvent Use within the provincial/territorial tables as CO<sub>2</sub> eq values.

3. Emission estimates from consumption of PFCs and NF<sub>3</sub>, as well as emissions of SF<sub>6</sub> from semi-conductor manufacturing, are only available at the national level. HFC and PFC consumption began in 1995;

HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.

- Indicates no emissions

0.0 Indicates emissions truncated due to rounding

x Indicates data has been suppressed to respect confidentiality

Estimates for the latest year (2014) are based on preliminary energy data; these data, though the best available information at the time of publication, are subject to revision in the next submission year.

Provincial/Territorial GHG emissions allocated to Canadian economic sectors are provided in Annex 12 of this report

**Table A11–9 2014 GHG Emission Summary for New Brunswick**

| Greenhouse Gas Categories  |                 |                 | Greenhouse Gases       |                  |                        |                        |                        |                        |                        |                        |  |

## Notes:

1. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.  
 2. Emissions from the Ammonia Production, Nitric Acid Production and Petrochemical Production and Carbon Black categories are included in Non-Energy Products from Fuels and Solvent Use within the provincial/territorial tables as CO<sub>2</sub> eq values.

3. HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.

4. IPCC's *Fourth Assessment Report* provides global warming potentials (GWP<sub>s</sub>) for the various species of HFCs and PFCs. Chapter 1, Table 1-1 of this report provides a list of GWP<sub>s</sub> used.

- Indicates no emissions

0.0 Indicates emissions truncated due to rounding

x Indicates data has been suppressed to respect confidentiality

Estimates for the latest year (2014) are based on preliminary energy data; these data, though the best available information at the time of publication, are subject to revision in the next submission year.

Provincial/Territorial GHG emissions allocated to Canadian economic sectors are provided in Annex 12 of this report

**Table A11–10 1990–2014 GHG Emission Summary for Quebec**

## Notes:

1. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.

2. Emissions from the Ammonia Production, Nitric Acid Production and Petrochemical Production and Carbon Black categories are included in Non-Energy Products from Fuels and Solvent Use within the provincial/territorial tables as CO<sub>2</sub> eq values.3. HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.

- Indicates no emissions

0.0 Indicates emissions truncated due to rounding

x Indicates data has been suppressed to respect confidentiality

Estimates for the latest year (2014) are based on preliminary energy data; these data, though the best available information at the time of publication, are subject to revision in the next submission year.

Provincial/Territorial GHG emissions allocated to Canadian economic sectors are provided in Annex 12 of this report

**Table A11-11 2014 GHG Emission Summary for Quebec**

## Notes:

1. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.  
 2. Emissions from the Ammonia Production, Nitric Acid Production and Petrochemical Production and Carbon Black categories are included in Non-Energy Products from Fuels and Solvent Use within the provincial/territorial tables as CO<sub>2</sub> eq values.

3. HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.

4. IPCC's *Fourth Assessment Report* provides global warming potentials (GWPs) for the various species of HFCs and PFCs. Chapter 1, Table 1-1 of this report provides a list of GWPs used.

- Indicates no emissions

0.0 Indicates emissions truncated due to rounding

x Indicates data has been suppressed to respect confidentiality

Estimates for the latest year (2014) are based on preliminary energy data; these data, though the best available information at the time of publication, are subject to revision in the next submission year.

Provincial/Territorial GHG emissions allocated to Canadian economic sectors are provided in Annex 12 of this report

**Table A11–12 1990–2014 GHG Emission Summary for Ontario**

| Greenhouse Gas Categories                   |   | 1990                          | 2000           | 2005           | 2010           | 2011           | 2012           | 2013           | 2014           |

## Notes:

1. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.
  2. Emissions from the Ammonia Production, Nitric Acid Production and Petrochemical Production and Carbon Black categories are included in Non-Energy Products from Fuels and Solvent Use within the provincial/territorial tables as CO<sub>2</sub> eq values.
  3. HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.
- Indicates no emissions  
0.0 Indicates emissions truncated due to rounding  
x Indicates data has been suppressed to respect confidentiality  
Estimates for the latest year (2014) are based on preliminary energy data; these data, though the best available information at the time of publication, are subject to revision in the next submission year.  
Provincial/Territorial GHG emissions allocated to Canadian economic sectors are provided in Annex 12 of this report

**Table A11–13 2014 GHG Emission Summary for Ontario**

Notes:

- Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.
- Emissions from the Ammonia Production, Nitric Acid Production and Petrochemical Production and Carbon Black categories are included in Non-Energy Products from Fuels and Solvent Use within the provincial/territorial tables as CO<sub>2</sub> eq values.
- HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.
- IPCC's *Fourth Assessment Report* provides global warming potentials (GWPs) for the various species of HFCs and PFCs. Chapter 1, Table 1-1 of this report provides a list of GWPs used.

- Indicates no emissions

0.0 Indicates emissions truncated due to rounding

x Indicates data has been suppressed to respect confidentiality

Estimates for the latest year (2014) are based on preliminary energy data; these data, though the best available information at the time of publication, are subject to revision in the next submission year.

Provincial/Territorial GHG emissions allocated to Canadian economic sectors are provided in Annex 12 of this report

**Table A11-14 1990–2014 GHG Emission for Manitoba**

## Notes:

1. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.
2. Emissions from the Ammonia Production, Nitric Acid Production and Petrochemical Production and Carbon Black categories are included in Non-Energy Products from Fuels and Solvent Use within the provincial/territorial tables as CO<sub>2</sub> eq values.
3. HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.

- Indicates no emissions

0.0 Indicates emissions truncated due to rounding

x Indicates data has been suppressed to respect confidentiality

Estimates for the latest year (2014) are based on preliminary energy data; these data, though the best available information at the time of publication, are subject to revision in the next submission year.

Provincial/Territorial GHG emissions allocated to Canadian economic sectors are provided in Annex 12 of this report

**Table A11–15 2014 GHG Emission Summary for Manitoba**

## Notes:

1. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.  
 2. Emissions from the Ammonia Production, Nitric Acid Production and Petrochemical Production and Carbon Black categories are included in Non-Energy Products from Fuels and Solvent Use within the provincial/territorial tables as CO<sub>2</sub> eq values.

3. HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.

4. IPCC's *Fourth Assessment Report* provides global warming potentials (GWP<sub>s</sub>) for the various species of HFCs and PFCs. Chapter 1, Table 1-1 of this report provides a list of GWP<sub>s</sub> used.

- Indicates no emissions

0.0 Indicates emissions truncated due to rounding

x Indicates data has been suppressed to respect confidentiality

Estimates for the latest year (2014) are based on preliminary energy data; these data, though the best available information at the time of publication, are subject to revision in the next submission year.

Provincial/Territorial GHG emissions allocated to Canadian economic sectors are provided in Annex 12 of this report

**Table A11–16 1990–2014 GHG Emission Summary from Saskatchewan**

## Notes:

1. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.  
 2. Emissions from the Ammonia Production, Nitric Acid Production and Petrochemical Production and Carbon Black categories are included in Non-Energy Products from Fuels and Solvent Use within the provincial/territorial tables as CO<sub>2</sub> eq values.

3. HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.

- Indicates no emissions

0.0 Indicates emissions truncated due to rounding

x Indicates data has been suppressed to respect confidentiality

Estimates for the latest year (2014) are based on preliminary energy data; these data, though the best available information at the time of publication, are subject to revision in the next submission year.

Provincial/Territorial GHG emissions allocated to Canadian economic sectors are provided in Annex 12 of this report

**Table A11-17 2014 GHG Emission Summary for Saskatchewan**

| Greenhouse Gas Categories  |                          | Greenhouse Gases |                 |                        |                  |                        |                        |                        |                        |                        |                        |

## Notes:

1. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.  
 2. Emissions from the Ammonia Production, Nitric Acid Production and Petrochemical Production and Carbon Black categories are included in Non-Energy Products from Fuels and Solvent Use within the provincial/territorial tables as CO<sub>2</sub> eq values.

3. HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.

4. IPCC's *Fourth Assessment Report* provides global warming potentials (GWP<sub>s</sub>) for the various species of HFCs and PFCs. Chapter 1, Table 1-1 of this report provides a list of GWP<sub>s</sub> used.

- Indicates no emissions

0.0 Indicates emissions truncated due to rounding

x Indicates data has been suppressed to respect confidentiality

Estimates for the latest year (2014) are based on preliminary energy data; these data, though the best available information at the time of publication, are subject to revision in the next submission year.

Provincial/Territorial GHG emissions allocated to Canadian economic sectors are provided in Annex 12 of this report

**Table A11–18 1990–2014 GHG Emission Summary for Alberta**

Notes:

1. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.
2. Emissions from the Ammonia Production, Nitric Acid Production and Petrochemical Production and Carbon Black categories are included in Non-Energy Products from Fuels and Solvent Use within the provincial/territorial tables as CO<sub>2</sub> eq values.
3. HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.

- Indicates no emissions

0.0 Indicates emissions truncated due to rounding

x Indicates data has been suppressed to respect confidentiality

Estimates for the latest year (2014) are based on preliminary energy data; these data, though the best available information at the time of publication, are subject to revision in the next submission year.

Provincial/Territorial GHG emissions allocated to Canadian economic sectors are provided in Annex 12 of this report

**Table A11–19 2014 GHG Emission Summary for Alberta**

## Notes:

- Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.
- Emissions from the Ammonia Production, Nitric Acid Production and Petrochemical Production and Carbon Black categories are included in Non-Energy Products from Fuels and Solvent Use within the provincial/territorial tables as CO<sub>2</sub> eq values.
- HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.
- IPCC's *Fourth Assessment Report* provides global warming potentials (GWP<sub>s</sub>) for the various species of HFCs and PFCs. Chapter 1, Table 1-1 of this report provides a list of GWP<sub>s</sub> used.

- Indicates no emissions

0.0 Indicates emissions truncated due to rounding

x Indicates data has been suppressed to respect confidentiality

Estimates for the latest year (2014) are based on preliminary energy data; these data, though the best available information at the time of publication, are subject to revision in the next submission year.

Provincial/Territorial GHG emissions allocated to Canadian economic sectors are provided in Annex 12 of this report

**Table A11–20 1990–2014 GHG Emission Summary for British Columbia**

| Greenhouse Gas Categories |   | 1990                          | 2000          | 2005          | 2010          | 2011          | 2012          | 2013          | 2014          |

## Notes:

1. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.  
 2. Emissions from the Ammonia Production, Nitric Acid Production and Petrochemical Production and Carbon Black categories are included in Non-Energy Products from Fuels and Solvent Use within the provincial/territorial tables as CO<sub>2</sub> eq values.

3. HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.

- Indicates no emissions

0.0 Indicates emissions truncated due to rounding

x Indicates data has been suppressed to respect confidentiality

Estimates for the latest year (2014) are based on preliminary energy data; these data, though the best available information at the time of publication, are subject to revision in the next submission year.

Provincial/Territorial GHG emissions allocated to Canadian economic sectors are provided in Annex 12 of this report

**Table A11–21 2014 GHG Emission Summary for British Columbia**

## Notes:

1. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.  
 2. Emissions from the Ammonia Production, Nitric Acid Production and Petrochemical Production and Carbon Black categories are included in Non-Energy Products from Fuels and Solvent Use within the provincial/territorial tables as CO<sub>2</sub> eq values.

3. HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.

4. IPCC's *Fourth Assessment Report* provides global warming potentials (GWP<sub>s</sub>) for the various species of HFCs and PFCs. Chapter 1, Table 1-1 of this report provides a list of GWP<sub>s</sub> used.

- Indicates no emissions

0.0 Indicates emissions truncated due to rounding

x Indicates data has been suppressed to respect confidentiality

Estimates for the latest year (2014) are based on preliminary energy data; these data, though the best available information at the time of publication, are subject to revision in the next submission year.

Provincial/Territorial GHG emissions allocated to Canadian economic sectors are provided in Annex 12 of this report

**Table A11–22 1990–2014 GHG Emission Summary for Yukon**

Notes:

1. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.

2. Emissions from the Ammonia Production, Nitric Acid Production and Petrochemical Production and Carbon Black categories are included in Non-Energy Products from Fuels and Solvent Use within the provincial/territorial tables as CO<sub>2</sub> eq values.3. HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.

- Indicates no emissions

0.0 Indicates emissions truncated due to rounding

x Indicates data has been suppressed to respect confidentiality

Estimates for the latest year (2014) are based on preliminary energy data; these data, though the best available information at the time of publication, are subject to revision in the next submission year.

Provincial/Territorial GHG emissions allocated to Canadian economic sectors are provided in Annex 12 of this report

**Table A11–23 2014 GHG Emission Summary for Yukon**

| Greenhouse Gas Categories  |      | Greenhouse Gases |                 |                        |                  |                        |                        |                        |                 |                 |                        |

## Notes:

1. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.

2. Emissions from the Ammonia Production, Nitric Acid Production and Petrochemical Production and Carbon Black categories are included in Non-Energy Products from Fuels and Solvent Use within the provincial/territorial tables as CO<sub>2</sub> eq values.

3. HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.

4. IPCC's *Fourth Assessment Report* provides global warming potentials (GWP<sub>s</sub>) for the various species of HFCs and PFCs. Chapter 1, Table 1-1 of this report provides a list of GWP<sub>s</sub> used.

- Indicates no emissions

0.0 Indicates emissions truncated due to rounding

x Indicates data has been suppressed to respect confidentiality

Estimates for the latest year (2014) are based on preliminary energy data; these data, though the best available information at the time of publication, are subject to revision in the next submission year.

Provincial/Territorial GHG emissions allocated to Canadian economic sectors are provided in Annex 12 of this report

**Table A11–24 1999–2014 GHG Emission Summary for Northwest Territories**

## Notes:

1. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.
  2. Emissions from the Ammonia Production, Nitric Acid Production and Petrochemical Production and Carbon Black categories are included in Non-Energy Products from Fuels and Solvent Use within the provincial/territorial tables as CO<sub>2</sub> eq values.
  3. HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.
- Indicates no emissions  
0.0 Indicates emissions truncated due to rounding  
x Indicates data has been suppressed to respect confidentiality  
Estimates for the latest year (2014) are based on preliminary energy data; these data, though the best available information at the time of publication, are subject to revision in the next submission year.  
Provincial/Territorial GHG emissions allocated to Canadian economic sectors are provided in Annex 12 of this report

**Table A11–25 2014 GHG Emission Summary for Northwest Territories**

## Notes:

1. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.  
 2. Emissions from the Ammonia Production, Nitric Acid Production and Petrochemical Production and Carbon Black categories are included in Non-Energy Products from Fuels and Solvent Use within the provincial/territorial tables as CO<sub>2</sub> eq values.

3. HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.

4. IPCC's *Fourth Assessment Report* provides global warming potentials (GWP<sub>s</sub>) for the various species of HFCs and PFCs. Chapter 1, Table 1-1 of this report provides a list of GWP<sub>s</sub> used.

- Indicates no emissions

0.0 Indicates emissions truncated due to rounding

x Indicates data has been suppressed to respect confidentiality

Estimates for the latest year (2014) are based on preliminary energy data; these data, though the best available information at the time of publication, are subject to revision in the next submission year.

Provincial/Territorial GHG emissions allocated to Canadian economic sectors are provided in Annex 12 of this report

**Table A11–26 1999–2014 GHG Emission Summary for Nunavut**

## Notes:

1. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.
  2. Emissions from the Ammonia Production, Nitric Acid Production and Petrochemical Production and Carbon Black categories are included in Non-Energy Products from Fuels and Solvent Use within the provincial/territorial tables as CO<sub>2</sub> eq values.
  3. HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.
- Indicates no emissions  
0.0 Indicates emissions truncated due to rounding  
x Indicates data has been suppressed to respect confidentiality  
Estimates for the latest year (2014) are based on preliminary energy data; these data, though the best available information at the time of publication, are subject to revision in the next submission year.  
Provincial/Territorial GHG emissions allocated to Canadian economic sectors are provided in Annex 12 of this report

**Table A11–27 2014 GHG Emission Summary for Nunavut**

## Notes:

1. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.  
 2. Emissions from the Ammonia Production, Nitric Acid Production and Petrochemical Production and Carbon Black categories are included in Non-Energy Products from Fuels and Solvent Use within the provincial/territorial tables as CO<sub>2</sub> eq values.

3. HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.

4. IPCC's *Fourth Assessment Report* provides global warming potentials (GWP<sub>s</sub>) for the various species of HFCs and PFCs. Chapter 1, Table 1-1 of this report provides a list of GWP<sub>s</sub> used.

- Indicates no emissions

0.0 Indicates emissions truncated due to rounding

x Indicates data has been suppressed to respect confidentiality

Estimates for the latest year (2014) are based on preliminary energy data; these data, though the best available information at the time of publication, are subject to revision in the next submission year.

Provincial/Territorial GHG emissions allocated to Canadian economic sectors are provided in Annex 12 of this report

**Table A11–28 1990–1998 GHG Emission Summary for Northwest Territories and Nunavut**

| Greenhouse Gas Categories |   | 1990                          | 1991         | 1992         | 1993         | 1994         | 1995         | 1996         | 1997         | 1998         |

## Notes:

1. Emissions from ethanol and biodiesel are included in the Transport categories using gasoline and diesel respectively.
2. Emissions from the Ammonia Production, Nitric Acid Production and Petrochemical Production and Carbon Black categories are included in Non-Energy Products from Fuels and Solvent Use within the provincial/territorial tables as CO<sub>2</sub> eq values.

3. HFC and PFC consumption began in 1995; HFC emissions occurring as a by-product of HCFC production (HCFC-22 exclusively) only occurred in Canada from 1990–1992 and PFC emissions prior to 1995 are the result of by-product CF<sub>4</sub> emissions from the use of NF<sub>3</sub>.

- Indicates no emissions

0.0 Indicates emissions truncated due to rounding

x Indicates data has been suppressed to respect confidentiality

Provincial/Territorial GHG emissions allocated to Canadian economic sectors are provided in Annex 12 of this report

# Annex 12

## Provincial/Territorial Greenhouse Gas Emission Tables by Canadian Economic Sector, 1990–2014

This annex contains summary tables (Table A12–1 to Table A12–14) illustrating GHG emissions by province/territory, allocated to Canadian economic sectors, from 1990–2014. To account for the creation of Nunavut in 1999, a time series from 1999–2014 is provided for both Northwest Territories and Nunavut (Table A12–11 and Table A12–12), and the years 1990–1998 are presented as a combined region in Table A12–14.

Provincial/territorial GHG emissions allocated to IPCC sectors are provided in Annex 11 of this report.

Reallocating provincial/territorial emissions from IPCC sectors into Canadian economic sectors is useful for the purposes of analyzing trends and policies, as most people associate GHG emissions with a particular economic activity (e.g. producing electricity, farming, or driving a car). This re-allocation simply re-categorizes emissions under different headings but does not change the overall magnitude of the provincial/territorial emission estimates. Estimates for each economic sector includes emissions from energy-related and non-energy-related processes.

Although the UNFCCC reporting guidelines require that only national-level detail be reported, provincial- and territorial-level detail is important, owing to the regional differences in emission levels and trends. Note that provincial and territorial emission estimates may not necessarily sum to the national totals due to rounding.

Provincial/territorial greenhouse gas emission tables are also available in various file formats online at <http://www.open.canada.ca>.

Note:

Totals may not add up due to rounding.

Provincial/territorial GHG emissions allocated to IPCC sectors are provided in Annex 11 of this report.

Estimates presented here are under continual improvement. Historical emissions may be changed in future publications as new data becomes available and methods and models are refined and improved.

- indicates no emissions

0.0 indicates emissions of less than 0.05 Mt CO<sub>2</sub> eq; truncated due to rounding

Note:

Totals may not add up due to rounding.

Provincial/territorial GHG emissions allocated to IPCC sectors are provided in Annex 11 of this report.

Estimates presented here are under continual improvement. Historical emissions may be changed in future publications as new data becomes available and methods and models are refined and improved.

- indicates no emissions

0.0 indicates emissions of less than 0.05 Mt CO<sub>2</sub> eq; truncated due to rounding

**Table A12-3 GHG Emissions for Prince Edward Island by Canadian Economic Sector, Selected Years**

Note:

Totals may not add up due to rounding.

Provincial/territorial GHG emissions allocated to IPCC sectors are provided in Annex 11 of this report.

Estimates presented here are under continual improvement. Historical emissions may be changed in future publications as new data becomes available and methods and models are refined and improved.

- indicates no emissions

0.0 indicates emissions of less than 0.05 Mt CO<sub>2</sub> eq; truncated due to rounding

Note:

Totals may not add up due to rounding.

Provincial/territorial GHG emissions allocated to IPCC sectors are provided in Annex 11 of this report.

Estimates presented here are under continual improvement. Historical emissions may be changed in future publications as new data becomes available and methods and models are refined and improved.

- indicates no emissions

0.0 indicates emissions of less than 0.05 Mt CO<sub>2</sub> eq; truncated due to rounding

A12

Note:

Totals may not add up due to rounding.

Provincial/territorial GHG emissions allocated to IPCC sectors are provided in Annex 11 of this report.

Estimates presented here are under continual improvement. Historical emissions may be changed in future publications as new data becomes available and methods and models are refined and improved.

- indicates no emissions

0.0 indicates emissions of less than 0.05 Mt CO<sub>2</sub> eq; truncated due to rounding

**Table A12-7 GHG Emissions for Manitoba by Canadian Economic Sector, Selected Years**

Note:

Totals may not add up due to rounding.

Provincial/territorial GHG emissions allocated to IPCC sectors are provided in Annex 11 of this report.

Estimates presented here are under continual improvement. Historical emissions may be changed in future publications as new data becomes available and methods and models are refined and improved.

- indicates no emissions

0.0 indicates emissions of less than 0.05 Mt CO<sub>2</sub> eq; truncated due to rounding

A12

Note:

Totals may not add up due to rounding.

Provincial/territorial GHG emissions allocated to IPCC sectors are provided in Annex11 of this report.

Estimates presented here are under continual improvement. Historical emissions may be changed in future publications as new data becomes available and methods and models are refined and improved.

- indicates no emissions

0.0 indicates emissions of less than 0.05 Mt CO<sub>2</sub> eq; truncated due to rounding

Note:

Totals may not add up due to rounding.

Provincial/territorial GHG emissions allocated to IPCC sectors are provided in Annex 11 of this report.

Estimates presented here are under continual improvement. Historical emissions may be changed in future publications as new data becomes available and methods and models are refined and improved.

- indicates no emissions

0.0 indicates emissions of less than 0.05 Mt CO<sub>2</sub> eq; truncated due to rounding

x indicates data has been suppressed to respect confidentiality

# Annex 13

## Electricity in Canada: Summary and Intensity Tables

This annex presents detailed greenhouse gas (GHG) information related to the generation of electricity by the Public Electricity and Heat Production category (IPCC Category 1.A.1.a), on a national and provincial level.

The Canadian electricity generation industry produces electricity by transforming the energy in falling water, coal, natural gas, refined petroleum products (RPPs), other miscellaneous fuels, biomass, nuclear, wind and solar resources. The process of supplying electricity to the public involves not only power generation at the plant, but also distribution through the electricity grid. The efficiency of the transmission system has an impact on the amount of electricity available to consumers. GHG emission estimates and electricity generation values are therefore based on activities that occur at the generating plant, and efforts have been made to include the impact of the transmission and distribution infrastructure (including sulphur hexafluoride ( $SF_6$ ) emissions associated with switchgear and other electrical equipment, which is accounted for in the Industrial Processes and Product Use Sector).

The electricity generation industry in Canada is composed of entities whose main activity is the production of electricity (main activity producers) and those who generate either partially or wholly for their own use (autoproducers). Main activity producers sell their electricity to the grid, and can be either public or private generators. Autoproducers are generally private companies that are generating electricity either to feed their operations or as a by-product of their operation. They may sell some or all of their electricity to the grid.

The analysis in this section only includes main activity producers. This analysis relies on a variety of data sources; fuel consumption and electricity production data are published by Statistics Canada in the *Report on Energy Supply and Demand in Canada* (RESD) (Statistics Canada 57-003-X), in the publication *Electric Power Generation, Transmission and Distribution* (EPGTD) (Statistics Canada 57-202-X) and online via CANSIM (Tables 127-0006, 127-0007 and 127-0008).

A “generation intensity” indicator is derived to reflect the GHG emissions intensity of electricity as it is delivered to the electricity grid. Electricity generation intensity values were derived for each fuel type using GHG emission estimates and electricity generation data. The methodology used to develop the GHG emissions is discussed in Chapter 3 and Annex 3.1 of this report. GHG emissions are based on the total fuel consumed by the public utility sector, as provided in the RESD, while generation data are from CANSIM (2005–2013) and the EPGTD publication (1990–2004).

A “consumption intensity” indicator was also derived to reflect the GHG emissions intensity of electricity as it is delivered to the consumer. Accordingly, electric energy losses in transmission and distribution are subtracted from overall total electricity generation, while  $SF_6$  emissions associated with equipment used in electricity transmission and distribution are added to overall total GHG emissions. The electric energy losses in transmission and distribution are taken to be the utility sector’s share of “unallocated energy,” as presented in Table A13–1 to Table A13–13 and calculated from data provided by CANSIM 127-0008. Likewise, the  $SF_6$  emission values are based on the electric utility sector’s share of total  $SF_6$  emissions from equipment used in electricity transmission and distribution.

Electricity intensity values for Canada, the provinces and the territories are provided in Table A13–1 to Table A13–13.

## Notes:

1. Data presented include emissions, generation and intensity for facilities classified under NAICS code 22111 - Electric Power Generation.
2. Preliminary data.
3. Emissions based on data taken from the *Report on Energy Supply and Demand in Canada*, Catalogue No. 57-003-X, Statistics Canada with the exception of coal data for 2014, which was taken from CANSIM Table 127-0004.
4. Includes GHG emissions from the combustion of refined petroleum products (light fuel oil, heavy fuel oil, and diesel), petroleum coke, still gas and other fuels not easily categorized.
5. GHG emissions from on-site combustion of fuel not directly related to electricity generation.
6. GHG emissions from the flooding of land for hydro dams are not included.
7. Totals may not add up to overall total due to rounding.
8. Taken from CANSIM Tables 127-0006 and 127-0007 (for 2005-2014).
9. Taken from the *Electric Power Generation, Transmission and Distribution (EPGTD)* publication, Catalogue No. 57-202-X, Statistics Canada (for 1990-2004).
10. Other Renewables - includes electricity generation by wind, tidal and solar.
11. NAICS category 221119, Other Electric Power Generation.
12. Intensity values have been rounded so as to present the estimated level of accuracy.
13. Adapted from Statistics Canada CANSIM Table 127-0008 (2005-2014) or Cat. No. 57-202-X (1990-2004).
14. Includes transmission line losses, metering differences and other losses.
15. The electric utility sector's share of emissions from electrical equipment from CRF Category 2.F.viii (Production and Consumption of Halocarbons and SF<sub>6</sub>).
16. Consumption intensity values are impacted by unallocated energy and SF<sub>6</sub> transmission emissions.
  - Indicates no emissions or no electricity generation
  - 0 Indicates emissions or electricity generation value less than 0.1

## Notes:

1. Data presented include emissions, generation and intensity for facilities classified under NAICS code 22111 - Electric Power Generation.
  2. Preliminary data.
  3. Emissions based on data taken from the *Report on Energy Supply and Demand in Canada*, Catalogue No. 57-003-X, Statistics Canada.
  4. Includes GHG emissions from the combustion of refined petroleum products (light fuel oil, heavy fuel oil, and diesel), petroleum coke, still gas and other fuels not easily categorized.
  5. GHG emissions from on-site combustion of fuel not directly related to electricity generation.
  6. GHG emissions from the flooding of land for hydro dams are not included.
  7. Totals may not add up to overall total due to rounding.
  8. Taken from CANSIM Tables 127-0006 and 127-0007 (for 2005-2014).
  9. Taken from the *Electric Power Generation, Transmission and Distribution* (EPGTD) publication, Catalogue No. 57-202-X, Statistics Canada (for 1990-2004).
  10. Other Renewables - includes electricity generation by wind, tidal and solar.
  11. NAICS category 221119, Other Electric Power Generation.
  12. Intensity values have been rounded so as to present the estimated level of accuracy.
  13. Adapted from Statistics Canada CANSIM Table 127-0008 (2005-2014) or Cat. No. 57-202-X (1990-2004).
  14. Includes transmission line losses, metering differences and other losses.
  15. The electric utility sector's share of emissions from electrical equipment from CRF Category 2.F.viii (Production and Consumption of Halocarbons and SF<sub>6</sub>).
  16. Consumption intensity values are impacted by unallocated energy and SF<sub>6</sub> transmission emissions.
- Indicates no emissions or no electricity generation  
0 Indicates emissions or electricity generation value less than 0.1

## Notes:

1. Data presented include emissions, generation and intensity for facilities classified under NAICS code 22111 - Electric Power Generation.
  2. Preliminary data.
  3. Emissions based on data taken from the *Report on Energy Supply and Demand in Canada*, Catalogue No. 57-003-X, Statistics Canada.
  4. Includes GHG emissions from the combustion of refined petroleum products (light fuel oil, heavy fuel oil, and diesel), petroleum coke, still gas and other fuels not easily categorized.
  5. GHG emissions from on-site combustion of fuel not directly related to electricity generation.
  6. GHG emissions from the flooding of land for hydro dams are not included.
  7. Totals may not add up to overall total due to rounding.
  8. Taken from CANSIM Tables 127-0006 and 127-0007 (for 2005-2014).
  9. Taken from the *Electric Power Generation, Transmission and Distribution* (EPGTD) publication, Catalogue No. 57-202-X, Statistics Canada (for 1990-2004).
  10. Other Renewables - includes electricity generation by wind, tidal and solar.
  11. NAICS category 221119, Other Electric Power Generation.
  12. Intensity values have been rounded so as to present the estimated level of accuracy.
  13. Adapted from Statistics Canada CANSIM Table 127-0008 (2005-2014) or Cat. No. 57-202-X (1990-2004).
  14. Includes transmission line losses, metering differences and other losses.
  15. The electric utility sector's share of emissions from electrical equipment from CRF Category 2.F.viii (Production and Consumption of Halocarbons and SF<sub>6</sub>).
  16. Consumption intensity values are impacted by unallocated energy and SF<sub>6</sub> transmission emissions.
- Indicates no emissions or no electricity generation  
0 Indicates emissions or electricity generation value less than 0.1  
unk Indicates unknown as appropriate data were unavailable  
\* Due to the high level of imports from New Brunswick, values for New Brunswick are more indicative of GHG consumption intensity.

## Notes:

1. Data presented include emissions, generation and intensity for facilities classified under NAICS code 22111 - Electric Power Generation.
  2. Preliminary data.
  3. Emissions based on data taken from the *Report on Energy Supply and Demand in Canada*, Catalogue No. 57-003-X, Statistics Canada.
  4. Includes GHG emissions from the combustion of refined petroleum products (light fuel oil, heavy fuel oil, and diesel), petroleum coke, still gas and other fuels not easily categorized.
  5. GHG emissions from on-site combustion of fuel not directly related to electricity generation.
  6. GHG emissions from the flooding of land for hydro dams are not included.
  7. Totals may not add up to overall total due to rounding.
  8. Taken from CANSIM Tables 127-0006 and 127-0007 (for 2005-2014).
  9. Taken from the *Electric Power Generation, Transmission and Distribution* (EPGTD) publication, Catalogue No. 57-202-X, Statistics Canada (for 1990-2004).
  10. Other Renewables - includes electricity generation by wind, tidal and solar.
  11. NAICS category 221119, Other Electric Power Generation.
  12. Intensity values have been rounded so as to present the estimated level of accuracy.
  13. Adapted from Statistics Canada CANSIM Table 127-0008 (2005-2014) or Cat. No. 57-202-X (1990-2004).
  14. Includes transmission line losses, metering differences and other losses.
  15. The electric utility sector's share of emissions from electrical equipment from CRF Category 2.F.viii (Production and Consumption of Halocarbons and SF<sub>6</sub>).
  16. Consumption intensity values are impacted by unallocated energy and SF<sub>6</sub> transmission emissions.
- Indicates no emissions or no electricity generation  
0 Indicates emissions or electricity generation value less than 0.1  
x Indicates data not shown due to statistical limitations

## Notes:

1. Data presented include emissions, generation and intensity for facilities classified under NAICS code 22111 - Electric Power Generation.
  2. Preliminary data.
  3. Emissions based on data taken from the *Report on Energy Supply and Demand in Canada*, Catalogue No. 57-003-X, Statistics Canada.
  4. Includes GHG emissions from the combustion of refined petroleum products (light fuel oil, heavy fuel oil, and diesel), petroleum coke, still gas and other fuels not easily categorized.
  5. GHG emissions from on-site combustion of fuel not directly related to electricity generation.
  6. GHG emissions from the flooding of land for hydro dams are not included.
  7. Totals may not add up to overall total due to rounding.
  8. Taken from CANSIM Tables 127-0006 and 127-0007 (for 2005–2014).
  9. Taken from the *Electric Power Generation, Transmission and Distribution* (EPGTD) publication, Catalogue No. 57-202-X, Statistics Canada (for 1990–2004).
  10. Other Renewables - includes electricity generation by wind, tidal and solar.
  11. NAICS category 221119, Other Electric Power Generation.
  12. Intensity values have been rounded so as to present the estimated level of accuracy.
  13. Adapted from Statistics Canada CANSIM Table 127-0008 (2005–2014) or Cat. No. 57-202-X (1990–2004).
  14. Includes transmission line losses, metering differences and other losses.
  15. The electric utility sector's share of emissions from electrical equipment from CRF Category 2.F.viii (Production and Consumption of Halocarbons and SF<sub>6</sub>).
  16. Consumption intensity values are impacted by unallocated energy and SF<sub>6</sub> transmission emissions.
- Indicates no emissions or no electricity generation  
0 Indicates emissions or electricity generation value less than 0.1  
x Indicates data has been suppressed to respect confidentiality  
unk Indicates unknown as appropriate data were unavailable

**Table A13–6 Electricity Generation and GHG Emission Details for Quebec<sup>1</sup>**

## Notes:

1. Data presented include emissions, generation and intensity for facilities classified under NAICS code 22111 - Electric Power Generation.
  2. Preliminary data.
  3. Emissions based on data taken from the *Report on Energy Supply and Demand in Canada*, Catalogue No. 57-003-X, Statistics Canada.
  4. Includes GHG emissions from the combustion of refined petroleum products (light fuel oil, heavy fuel oil, and diesel), petroleum coke, still gas and other fuels not easily categorized.
  5. GHG emissions from on-site combustion of fuel not directly related to electricity generation.
  6. GHG emissions from the flooding of land for hydro dams are not included.
  7. Totals may not add up to overall total due to rounding.
  8. Taken from CANSIM Tables 127-0006 and 127-0007 (for 2005-2014).
  9. Taken from the *Electric Power Generation, Transmission and Distribution* (EPGTD) publication, Catalogue No. 57-202-X, Statistics Canada (for 1990-2004).
  10. Other Renewables - includes electricity generation by wind, tidal and solar.
  11. NAICS category 221119, Other Electric Power Generation.
  12. Intensity values have been rounded so as to present the estimated level of accuracy.
  13. Adapted from Statistics Canada CANSIM Table 127-0008 (2005-2014) or Cat. No. 57-202-X (1990-2004).
  14. Includes transmission line losses, metering differences and other losses.
  15. The electric utility sector's share of emissions from electrical equipment from CRF Category 2.F.viii (Production and Consumption of Halocarbons and SF<sub>6</sub>).
  16. Consumption intensity values are impacted by unallocated energy and SF<sub>6</sub> transmission emissions.
- Indicates no emissions or no electricity generation  
0 Indicates emissions or electricity generation value less than 0.1  
x Indicates data has been suppressed to respect confidentiality

## Notes:

1. Data presented include emissions, generation and intensity for facilities classified under NAICS code 22111 - Electric Power Generation.
  2. Preliminary data.
  3. Emissions based on data taken from the *Report on Energy Supply and Demand in Canada*, Catalogue No. 57-003-X, Statistics Canada with the exception of coal data for 2014, which was taken from CANSIM Table 127-0004.
  4. Includes GHG emissions from the combustion of refined petroleum products (light fuel oil, heavy fuel oil, and diesel), petroleum coke, still gas and other fuels not easily categorized.
  5. GHG emissions from on-site combustion of fuel not directly related to electricity generation.
  6. GHG emissions from the flooding of land for hydro dams are not included.
  7. Totals may not add up to overall total due to rounding.
  8. Taken from CANSIM Tables 127-0006 and 127-0007 (for 2005–2014).
  9. Taken from the *Electric Power Generation, Transmission and Distribution (EPGTD)* publication, Catalogue No. 57-202-X, Statistics Canada (for 1990–2004).
  10. Other Renewables - includes electricity generation by wind, tidal and solar.
  11. NAICS category 221119, Other Electric Power Generation.
  12. Intensity values have been rounded so as to present the estimated level of accuracy.
  13. Adapted from Statistics Canada CANSIM Table 127-0008 (2005–2014) or Cat. No. 57-202-X (1990–2004).
  14. Includes transmission line losses, metering differences and other losses.
  15. The electric utility sector's share of emissions from electrical equipment from CRF Category 2.F.viii (Production and Consumption of Halocarbons and SF<sub>6</sub>).
  16. Consumption intensity values are impacted by unallocated energy and SF<sub>6</sub> transmission emissions.
- Indicates no emissions or no electricity generation  
0 Indicates emissions or electricity generation value less than 0.1  
x Indicates data has been suppressed to respect confidentiality

## Notes:

1. Data presented include emissions, generation and intensity for facilities classified under NAICS code 22111 - Electric Power Generation.
  2. Preliminary data.
  3. Emissions based on data taken from the *Report on Energy Supply and Demand in Canada*, Catalogue No. 57-003-X, Statistics Canada.
  4. Includes GHG emissions from the combustion of refined petroleum products (light fuel oil, heavy fuel oil, and diesel), petroleum coke, still gas and other fuels not easily categorized.
  5. GHG emissions from on-site combustion of fuel not directly related to electricity generation.
  6. GHG emissions from the flooding of land for hydro dams are not included.
  7. Totals may not add up to overall total due to rounding.
  8. Taken from CANSIM Tables 127-0006 and 127-0007 (for 2005-2014).
  9. Taken from the *Electric Power Generation, Transmission and Distribution* (EPGTD) publication, Catalogue No. 57-202-X, Statistics Canada (for 1990-2004).
  10. Other Renewables - includes electricity generation by wind, tidal and solar.
  11. NAICS category 221119, Other Electric Power Generation.
  12. Intensity values have been rounded so as to present the estimated level of accuracy.
  13. Adapted from Statistics Canada CANSIM Table 127-0008 (2005-2014) or Cat. No. 57-202-X (1990-2004).
  14. Includes transmission line losses, metering differences and other losses.
  15. The electric utility sector's share of emissions from electrical equipment from CRF Category 2.F.viii (Production and Consumption of Halocarbons and SF<sub>6</sub>).
  16. Consumption intensity values are impacted by unallocated energy and SF<sub>6</sub> transmission emissions.
- Indicates no emissions or no electricity generation  
0 Indicates emissions or electricity generation value less than 0.1  
x Indicates data has been suppressed to respect confidentiality

## Notes:

1. Data presented include emissions, generation and intensity for facilities classified under NAICS code 22111 - Electric Power Generation.
  2. Preliminary data.
  3. Emissions based on data taken from the *Report on Energy Supply and Demand in Canada*, Catalogue No. 57-003-X, Statistics Canada.
  4. Includes GHG emissions from the combustion of refined petroleum products (light fuel oil, heavy fuel oil, and diesel), petroleum coke, still gas and other fuels not easily categorized.
  5. GHG emissions from on-site combustion of fuel not directly related to electricity generation.
  6. GHG emissions from the flooding of land for hydro dams are not included.
  7. Totals may not add up to overall total due to rounding.
  8. Taken from CANSIM Tables 127-0006 and 127-0007 (for 2005–2014).
  9. Taken from the *Electric Power Generation, Transmission and Distribution* (EPGTD) publication, Catalogue No. 57-202-X, Statistics Canada (for 1990–2004).
  10. Other Renewables - includes electricity generation by wind, tidal and solar.
  11. NAICS category 221119, Other Electric Power Generation.
  12. Intensity values have been rounded so as to present the estimated level of accuracy.
  13. Adapted from Statistics Canada CANSIM Table 127-0008 (2005–2014) or Cat. No. 57-202-X (1990–2004).
  14. Includes transmission line losses, metering differences and other losses.
  15. The electric utility sector's share of emissions from electrical equipment from CRF Category 2.F.viii (Production and Consumption of Halocarbons and SF<sub>6</sub>).
  16. Consumption intensity values are impacted by unallocated energy and SF<sub>6</sub> transmission emissions.
- Indicates no emissions or no electricity generation  
0 Indicates emissions or electricity generation value less than 0.1  
x Indicates data has been suppressed to respect confidentiality

## Notes:

1. Data presented include emissions, generation and intensity for facilities classified under NAICS code 22111 - Electric Power Generation.
  2. Preliminary data.
  3. Emissions based on data taken from the *Report on Energy Supply and Demand in Canada*, Catalogue No. 57-003-X, Statistics Canada.
  4. Includes GHG emissions from the combustion of refined petroleum products (light fuel oil, heavy fuel oil, and diesel), petroleum coke, still gas and other fuels not easily categorized.
  5. GHG emissions from on-site combustion of fuel not directly related to electricity generation.
  6. GHG emissions from the flooding of land for hydro dams are not included.
  7. Totals may not add up to overall total due to rounding.
  8. Taken from CANSIM Tables 127-0006 and 127-0007 (for 2005-2014).
  9. Taken from the *Electric Power Generation, Transmission and Distribution (EPGTD)* publication, Catalogue No. 57-202-X, Statistics Canada (for 1990-2004).
  10. Other Renewables - includes electricity generation by wind, tidal and solar.
  11. NAICS category 221119, Other Electric Power Generation.
  12. Intensity values have been rounded so as to present the estimated level of accuracy.
  13. Adapted from Statistics Canada CANSIM Table 127-0008 (2005-2014) or Cat. No. 57-202-X (1990-2004).
  14. Includes transmission line losses, metering differences and other losses.
  15. The electric utility sector's share of emissions from electrical equipment from CRF Category 2.F.viii (Production and Consumption of Halocarbons and SF<sub>6</sub>).
  16. Consumption intensity values are impacted by unallocated energy and SF<sub>6</sub> transmission emissions.
- Indicates no emissions or no electricity generation  
0 Indicates emissions or electricity generation value less than 0.1  
x Indicates data has been suppressed to respect confidentiality

## Notes:

1. Data presented include emissions, generation and intensity for facilities classified under NAICS code 22111 - Electric Power Generation.
  2. Preliminary data.
  3. Emissions based on data taken from the *Report on Energy Supply and Demand in Canada*, Catalogue No. 57-003-X, Statistics Canada.
  4. Includes GHG emissions from the combustion of refined petroleum products (light fuel oil, heavy fuel oil, and diesel), petroleum coke, still gas and other fuels not easily categorized.
  5. GHG emissions from on-site combustion of fuel not directly related to electricity generation.
  6. GHG emissions from the flooding of land for hydro dams are not included.
  7. Totals may not add up to overall total due to rounding.
  8. Taken from CANSIM Tables 127-0006 and 127-0007 (for 2005–2014).
  9. Taken from the *Electric Power Generation, Transmission and Distribution* (EPGTD) publication, Catalogue No. 57-202-X, Statistics Canada (for 1990–2004).
  10. Other Renewables - includes electricity generation by wind, tidal and solar.
  11. NAICS category 221119, Other Electric Power Generation.
  12. Intensity values have been rounded so as to present the estimated level of accuracy.
  13. Adapted from Statistics Canada CANSIM Table 127-0008 (2005–2014) or Cat. No. 57-202-X (1990–2004).
  14. Includes transmission line losses, metering differences and other losses.
  15. The electric utility sector's share of emissions from electrical equipment from CRF Category 2.F.viii (Production and Consumption of Halocarbons and SF<sub>6</sub>).
  16. Consumption intensity values are impacted by unallocated energy and SF<sub>6</sub> transmission emissions.
- Indicates no emissions or no electricity generation  
0 Indicates emissions or electricity generation value less than 0.1  
x Indicates data has been suppressed to respect confidentiality  
unk Indicates unknown as appropriate data were unavailable

  2. Preliminary data.
  3. Emissions based on data taken from the *Report on Energy Supply and Demand in Canada*, Catalogue No. 57-003-X, Statistics Canada.
  4. Includes GHG emissions from the combustion of refined petroleum products (light fuel oil, heavy fuel oil, and diesel), petroleum coke, still gas and other fuels not easily categorized.
  5. GHG emissions from on-site combustion of fuel not directly related to electricity generation.
  6. GHG emissions from the flooding of land for hydro dams are not included.
  7. Totals may not add up to overall total due to rounding.
  8. Taken from CANSIM Tables 127-0006 and 127-0007 (for 2005-2014).
  9. Taken from the *Electric Power Generation, Transmission and Distribution* (EPGTD) publication, Catalogue No. 57-202-X, Statistics Canada (for 1990-2004).
  10. Other Renewables - includes electricity generation by wind, tidal and solar.
  11. NAICS category 221119, Other Electric Power Generation.
  12. Intensity values have been rounded so as to present the estimated level of accuracy.
  13. Adapted from Statistics Canada CANSIM Table 127-0008 (2005-2014) or Cat. No. 57-202-X (1990-2004).
  14. Includes transmission line losses, metering differences and other losses.
  15. The electric utility sector's share of emissions from electrical equipment from CRF Category 2.F.viii (Production and Consumption of Halocarbons and SF<sub>6</sub>).
  16. Consumption intensity values are impacted by unallocated energy and SF<sub>6</sub> transmission emissions.
- Indicates no emissions or no electricity generation  
0 Indicates emissions or electricity generation value less than 0.1

## Notes:

1. Data presented include emissions, generation and intensity for facilities classified under NAICS code 22111 - Electric Power Generation.
  2. Preliminary data.
  3. Emissions based on data taken from the *Report on Energy Supply and Demand in Canada*, Catalogue No. 57-003-X, Statistics Canada.
  4. Includes GHG emissions from the combustion of refined petroleum products (light fuel oil, heavy fuel oil, and diesel), petroleum coke, still gas and other fuels not easily categorized.
  5. GHG emissions from on-site combustion of fuel not directly related to electricity generation.
  6. GHG emissions from the flooding of land for hydro dams are not included.
  7. Totals may not add up to overall total due to rounding.
  8. Taken from CANSIM Tables 127-0006 and 127-0007 (for 2005-2014).
  9. Taken from the *Electric Power Generation, Transmission and Distribution* (EPGTD) publication, Catalogue No. 57-202-X, Statistics Canada (for 1990-2004).
  10. Other Renewables - includes electricity generation by wind, tidal and solar.
  11. NAICS category 221119, Other Electric Power Generation.
  12. Intensity values have been rounded so as to present the estimated level of accuracy.
  13. Adapted from Statistics Canada CANSIM Table 127-0008 (2005-2014) or Cat. No. 57-202-X (1990-2004).
  14. Includes transmission line losses, metering differences and other losses.
  15. The electric utility sector's share of emissions from electrical equipment from CRF Category 2.F.viii (Production and Consumption of Halocarbons and SF<sub>6</sub>).
  16. Consumption intensity values are impacted by unallocated energy and SF<sub>6</sub> transmission emissions.
- Indicates no emissions or no electricity generation  
0 Indicates emissions or electricity generation value less than 0.1
