Framework Convention on Climate Change

Public Private People Partnerships for Climate Compatible Development (4PCCD) | Mozambique

[Public Private People Partnerships for Climate Compatible Development \(4PCCD\)](#)

empowers people living in urban poor neighborhoods in Maputo, Mozambique, to design and implement activities to adapt to climate change. These activities include improving and maintaining drainage channels; protecting the water supply; managing local waste; and establishing awareness and communication channels between citizens and relevant institutions.

The problem

Because of its coastal location, facing the Indian Ocean, Maputo is exposed to severe climate risks, such as flooding, cyclones and sea level rise. In addition, 44 per cent of the population lives in poverty and access to services and other infrastructure is low. Heightened environmental risks are compounded with high vulnerabilities to these risks.

The solution

4PCCD brings together municipal and national actions to jointly build strategies for climate resilience that benefit urban poor communities. It focuses on producing local plans and engaging municipal and national government institutions, which are developing strategies to tackle climate change. 4PCCD also gets citizens involved in decisions that affect their resilience to climate change and the future sustainability of their neighbourhoods.
