Renault-Nissan Alliance

Geographical coverage: Worldwide

Summary: Electric vehicles are an available solution to mitigating climate change issues. The Renault-Nissan Alliance has been a pioneer in developing and mass-marketing a full line-up of electric vehicles since 2010.

As market leader, we commit to pursue and reinforce this strategy. Electric vehicles environmental benefits will be maximized only if they represent a significant portion of total global sales. This critical mass requires an holistic approach involving private and public actors.
