Subsidiary Body for Implementation
Forty-fifth session
Marrakech, 7–14 November 2016

Item 3(d) of the provisional agenda
Reporting from and review of Parties included in Annex I to the Convention
Report on national greenhouse gas inventory data from Parties included in Annex I to the Convention for the period 1990–2014

National greenhouse gas inventory data for the period 1990–2014

Report by the secretariat*

Summary

Forty-two Parties included in Annex I to the Convention (Annex I Parties) submitted their greenhouse gas (GHG) inventory common reporting format (CRF) tables and national inventory reports (NIRs) in 2016. By the deadline of 15 April 2016, CRF tables from 38 Parties and NIRs from 33 Parties had been received. Over the period 1990–2014, total aggregate GHG emissions without emissions and removals from land use, land-use change and forestry (LULUCF) for all Annex I Parties decreased by 11.3 per cent, while total GHG emissions and removals with LULUCF decreased by 15.8 per cent. For Annex I Parties with economies in transition, GHG emissions without and with LULUCF decreased by 37.2 per cent and 47.0 per cent, respectively. For Annex I Parties that do not have economies in transition, GHG emissions without and with LULUCF increased by 1.4 per cent and 0.7 per cent, respectively. The information in this document is based on information in the national GHG inventory submissions of Annex I Parties received as at 16 September 2016. At the time of the publication of this document, the annual review process for GHG inventories from Annex I Parties was still ongoing; therefore, the data included in this document may not reflect the latest information provided by Parties. The latest GHG inventory data are available on the UNFCCC website.

* This document was submitted after the due date in order to take into account the latest submissions from Parties.

GE.16-18355(E)
1618355

Contents

I. Introduction

A. Mandate

1. The Conference of the Parties (COP), by decision 24/CP.19, requested Parties included in Annex I to the Convention (Annex I Parties) to submit national inventory data on greenhouse gas (GHG) emissions by sources and removals by sinks by 15 April each year. By decision 13/CP.20, paragraphs 8 and 10, the COP requested the secretariat to compile and summarize information on GHG inventory data submitted by Annex I Parties, inter alia, for consideration by the COP and the subsidiary bodies.

B. Scope of the note

2. This document shows the status of reporting of GHG inventories by Annex I Parties in 2016 (chapter II) and provides a summary of the latest available data on GHG emissions and removals for the period 1990–2014 (chapter III). Data are provided for carbon dioxide (CO_2), methane (CH_4) and nitrous oxide (N_2O), as well as for hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), sulphur hexafluoride (SF_6), unspecified mix of HFCs and PFCs (MIX) and nitrogen trifluoride (NF_3) taken together, and, where Parties have elected to report them, indirect CO_2 emissions from the atmospheric oxidation of CH_4, carbon monoxide and non-methane volatile organic compounds. Data are provided on total[1] aggregate[2] GHG emissions, both without and with net GHG emissions and removals from land use, land-use change and forestry (LULUCF).

3. The information provided in this document is based on information in the national GHG inventories received from 42 Annex I Parties (see table 1) as at 16 September 2016.

4. At the time of the publication of this document, the annual review process for GHG inventories from Annex I Parties was still ongoing; therefore, the data presented here may not reflect the latest information provided by Parties. The latest GHG inventory data are available on the UNFCCC website.[3]

C. Possible action by the Subsidiary Body for Implementation

5. The Subsidiary Body for Implementation may wish to take note of the information contained in this document and seek further guidance from the COP, as appropriate.

II. Status of reporting

A. Timeliness and completeness of submissions

6. According to the "Guidelines for the preparation of national communications by Parties included in Annex I to the Convention, Part I: UNFCCC reporting guidelines on

[1] The term "total" implies that emissions from the sectors of the common reporting format are summed; the inclusion of emissions from land use, land-use change and forestry in the sum is indicated separately; unless stated otherwise, totals do not include indirect CO2 emissions.

[2] The term "aggregate" implies that GHG emissions and removals are calculated as a weighted sum of CO_2, CH_4, N_2O, HFCs, PFCs, SF_6, MIX and NF_3 using the global warming potential values agreed under the Convention.

[3] <http://unfccc.int/9492.php>.

annual greenhouse gas inventories" (hereinafter referred to as the UNFCCC Annex I inventory reporting guidelines),[4] Annex I Parties are required to submit annually a national inventory report (NIR) and common reporting format (CRF) tables containing data from the base year up to two years prior to the year of submission. In 2016, 42 Annex I Parties provided GHG data for all years from 1990[5] to 2014.

7. By 15 April 2016, CRF tables had been received from 37 Parties and NIRs had been received from 33 Parties. Within six weeks after 15 April 2016, a total of 40 Parties[6] had submitted their CRF tables and 39 Parties had submitted their NIRs. The dates of the initial submissions of the CRF tables are shown in table 1.

Table 1
Greenhouse gas inventory submissions from Annex I Parties in 2016

Party	*CRF tables submission date*[a]	*Party*	*CRF tables submission date*[a]
Australia	*27 May 2016*	Liechtenstein	15 April 2016
Austria	14 April 2016	Lithuania	15 April 2016

Czechia	15 April 2016	Poland	15 April 2016
Denmark	15 April 2016	Portugal	15 April 2016
Estonia	15 April 2016	Romania	15 April 2016
European Union	15 April 2016	Russian Federation	15 April 2016
Finland	15 April 2016	Slovakia	15 April 2016
France	15 April 2016	Slovenia	15 April 2016
Germany	15 April 2016	Spain	15 April 2016
Greece	15 April 2016	Sweden	15 April 2016
Hungary	15 April 2016	Switzerland	15 April 2016
Iceland	15 April 2016	Turkey	15 April 2016
Ireland	*15 June 2016*	Ukraine	*24 May 2016*
Italy	15 April 2016	United Kingdom	15 April 2016
Japan	14 April 2016	United States	15 April 2016
Latvia	15 April 2016		

Abbreviation: CRF = common reporting format.

[a] Dates after 15 April 2016 are shown in italics. The dates of submission of the national inventory reports may be different. Blank cells indicate that no submission had been received as at 16 September 2016.

[4] Decision 24/CP.19, annex I.

[5] Unless otherwise specified, for certain Parties base year data are used instead of 1990 data. The Parties that may use a base year other than 1990, as stipulated in decisions 9/CP.2 and 11/CP.4, provided data for their respective base years. Such Parties and their base years are Bulgaria (1988), Hungary (average of 1985–1987), Poland (1988), Romania (1989) and Slovenia (1986).

[6] When making their submissions, some Parties referred to technical problems that they encountered with the reporting software. In decision 20/CP.21, the COP noted that the CRF Reporter was not yet fully functioning.

8. After the initial submissions, 36 Parties submitted revised versions of their CRF tables and 31 Parties resubmitted their NIRs.

B. Recalculations

9. According to the UNFCCC Annex I inventory reporting guidelines, Parties should, where necessary, conduct recalculations in order to improve the quality of their emission estimates and ensure the consistency of the time series.

10. In 2016, 39 Annex I Parties[7] reported recalculations that had an impact on their estimated GHG emissions for 1990 (see table 2). The recalculations resulted from changes in activity data, emission factors and methodologies. For total aggregate GHG emissions without LULUCF, the change was less than 1 per cent for 29 Parties and more than 3 per cent for 4 Parties. For total aggregate GHG emissions with LULUCF, the change was less than 1 per cent for 24 Parties and more than 3 per cent for 7 Parties.

Table 2
Inventory recalculations by Annex I Parties in 2016

Party	*Impact on GHG emissions for 1990 without LULUCF (%)*[a]	*Impact on GHG emissions for 1990 with LULUCF (%)*[a]
Australia	–2.3	2.9
Austria	0.2	0.5
Belarus		
Belgium	–0.7	–0.8
Bulgaria	–5.1	–6.6
Canada	0.0	0.1

United States	2.1	0.3

Abbreviations: GHG = greenhouse gas, LULUCF = land use, land-use change and forestry.
[a] Blank cells indicate that recalculations were not available.

11. Total aggregate GHG emissions for Annex I Parties were not presented in the 2015 report on GHG data[8] because submissions had been received from only 30 Parties.[9] Thus, it was not possible to carry out the following:

(a) A comparison of estimates reported in 2015 and 2016 of the total aggregate GHG emissions of Annex I Parties in 1990;

(b) A comparison of the changes in the total aggregate GHG emissions from 1990 to the latest available year of Annex I Parties reported in 2015 and 2016.

III. Overview of emission trends and sources in Annex I Parties

A. Total aggregate greenhouse gas emissions

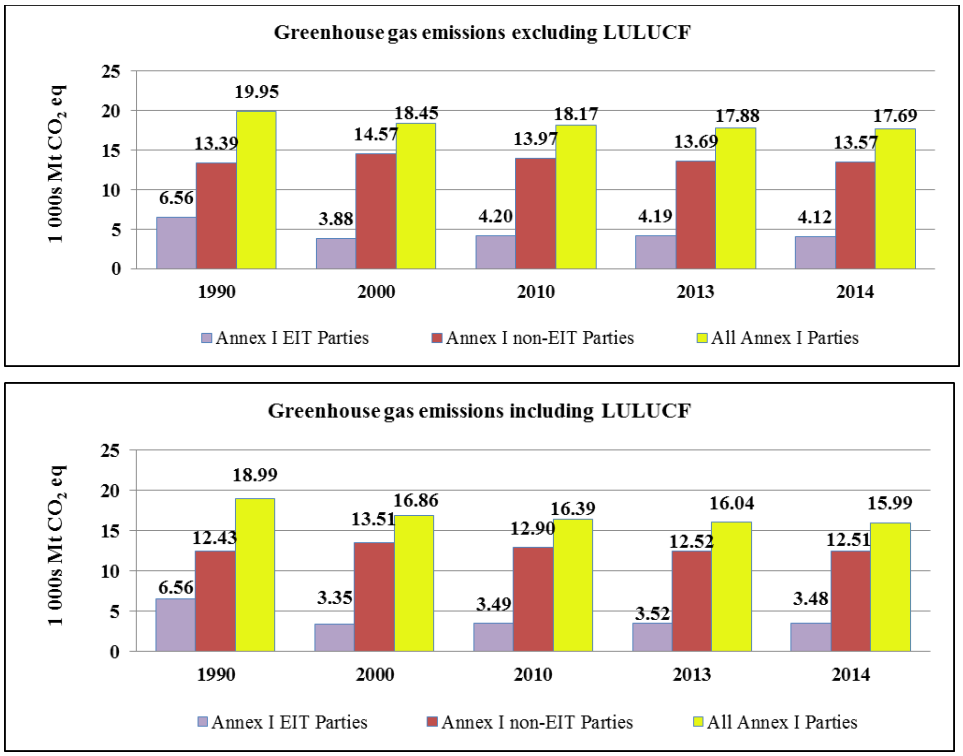
12. Figures 1 and 2 show the trends in total aggregate GHG emissions from 1990 to 2014 for all Annex I Parties taken together, for Annex I Parties with economies in transition (Annex I EIT Parties) and for Annex I Parties that do not have economies in transition.

13. From 1990 to 2014, total aggregate GHG emissions without emissions and removals from LULUCF for all Annex I Parties decreased by 11.3 per cent, from 19,949.10 Mt CO_2 eq to 17,689.61 Mt CO_2 eq. During the same period, total aggregate GHG emissions with

[8] FCCC/SBI/2015/21.
[9] This was due to a delay in the availability of the CRF Reporter. In accordance with decision 13/CP.20, Annex I Parties may submit their CRF tables after 15 April in 2015, but no later than the corresponding delay in the CRF Reporter availability.

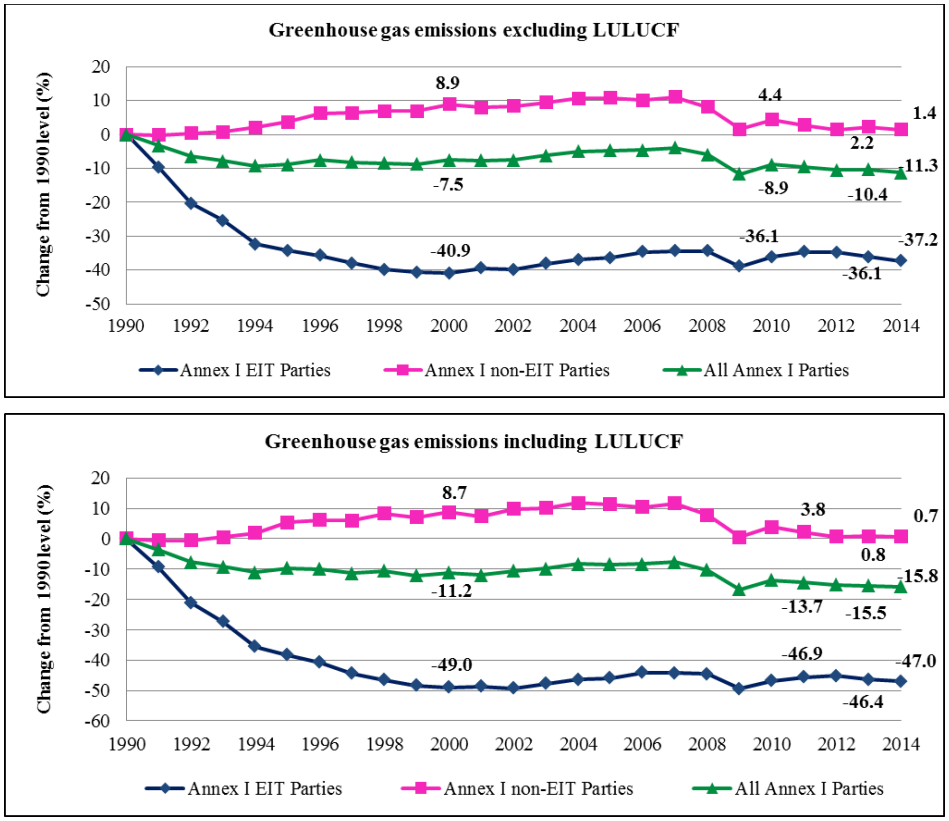
LULUCF decreased by 15.8 per cent, from 18,988.41 Mt CO_2 eq to 15,989.76 Mt CO_2 eq. From 2000 to 2014, GHG emissions without and with LULUCF decreased by 4.1 per cent and 5.2 per cent, respectively. Between 2013 and 2014, GHG emissions decreased by 1.0 per cent without LULUCF and by 0.3 per cent with LULUCF.

Figure 1
Greenhouse gas emissions of Annex I Parties, 1990, 2000, 2010, 2013 and 2014



Abbreviations: EIT = economies in transition, LULUCF = land use, land-use change and forestry.

Figure 2
Changes in greenhouse gas emissions of Annex I Parties, 1990–2014



Abbreviations: EIT = economies in transition, LULUCF = land use, land-use change and forestry.

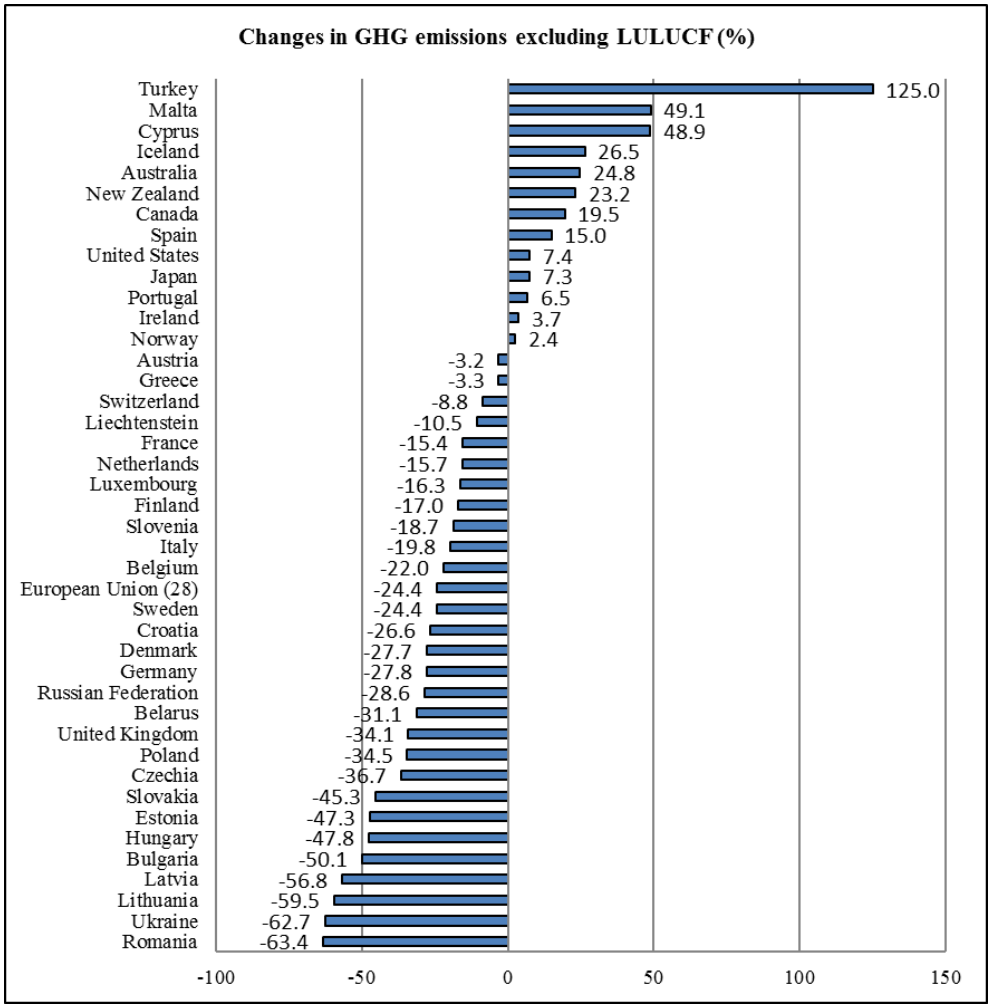
14. For Annex I EIT Parties, GHG emissions from 1990 to 2014 decreased by 37.2 per cent without LULUCF and by 47.0 per cent with LULUCF. From 2000 to 2014, GHG emissions without and with LULUCF increased by 6.2 per cent and 3.9 per cent, respectively. Between 2013 and 2014, GHG emissions decreased by 1.7 per cent without LULUCF and by 1.2 per cent with LULUCF.

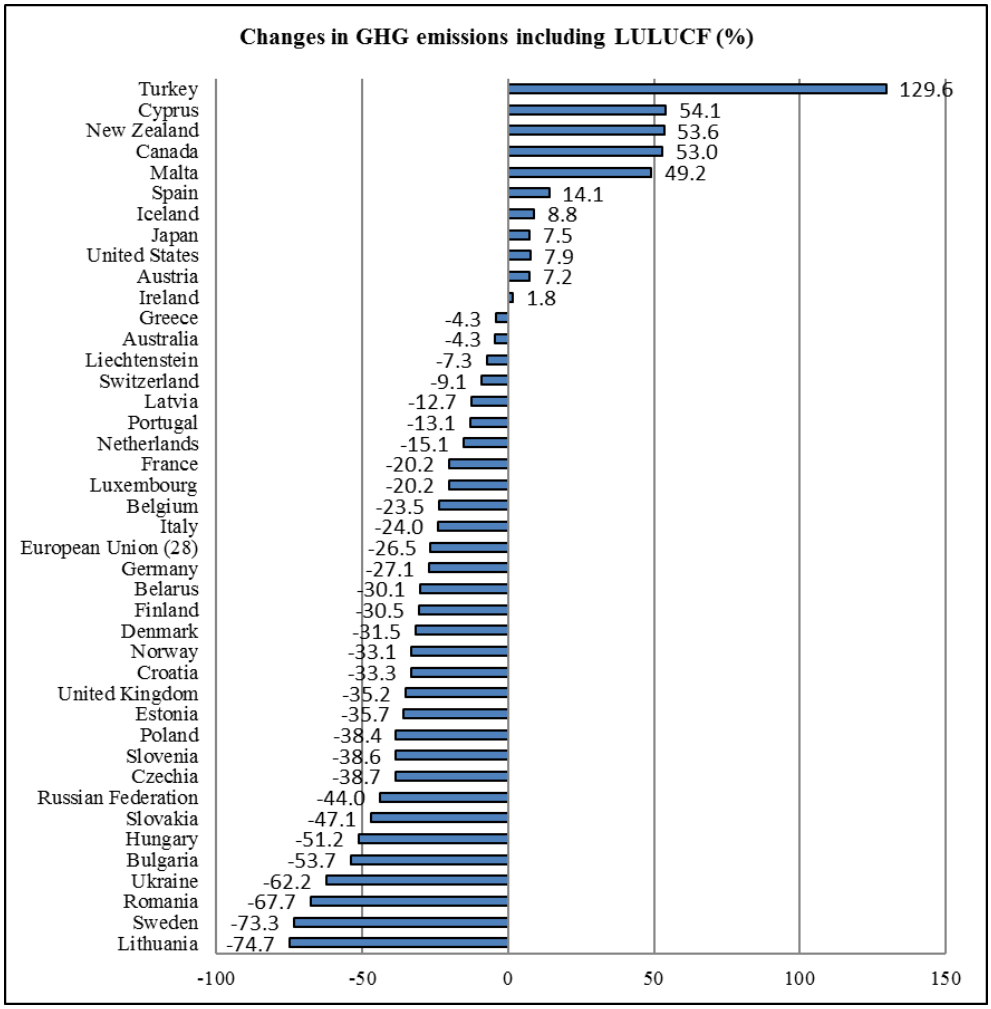
15. For Annex I Parties that do not have economies in transition, from 1990 to 2014 GHG emissions increased by 1.4 per cent without LULUCF and by 0.7 per cent with LULUCF. From 2000 to 2014, GHG emissions without and with LULUCF decreased by 6.9 per cent and 7.4 per cent, respectively. Between 2013 and 2014, GHG emissions showed a decrease of 0.8 per cent without LULUCF and of 0.1 per cent with LULUCF.

16. The changes in total aggregate GHG emissions over the period 1990–2014 varied considerably among Parties (see figure 3). The largest decrease in emissions without LULUCF was in Romania (by 63.4 per cent), while the largest decrease in emissions with LULUCF was in Lithuania (by 74.7 per cent). On the other hand, the greatest increase in emissions without and with LULUCF was in Turkey (by 125.0 per cent and 129.6 per cent, respectively).

Figure 3

Changes in total aggregate emissions of individual Annex I Parties, 1990–2014





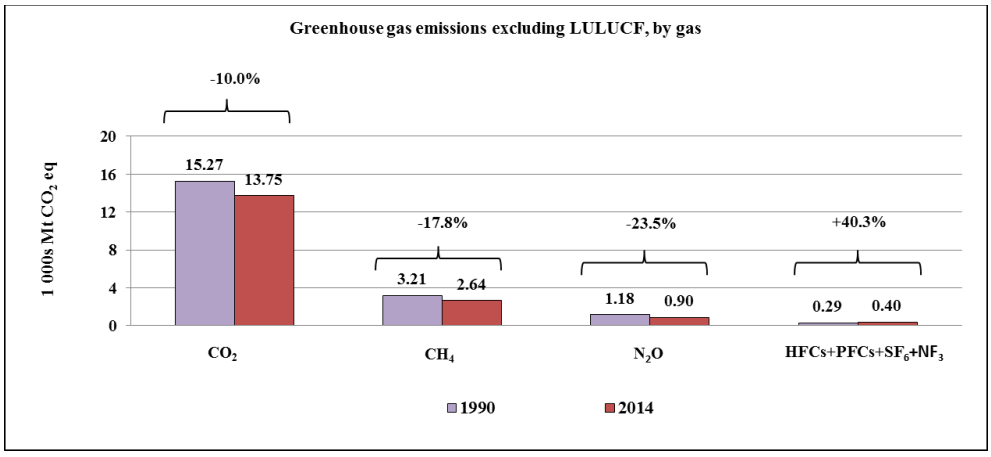
Abbreviations: GHG = greenhouse gas, LULUCF = land use, land-use change and forestry.

B. Greenhouse gas emissions by gas

17. Throughout the period 1990–2014, CO_2 accounted for the largest share of total emissions, contributing 76.6 per cent in 1990 and 77.7 per cent in 2014. CH_4 was the second-highest contributor to total GHG emissions (16.1 per cent in 1990 and 14.9 per cent in 2014), followed by N_2O (5.9 per cent in 1990 and 5.1 per cent in 2014). The emissions of HFCs, PFCs, SF_6, MIX and NF_3 taken together contributed less than 2.5 per cent of the total GHG emissions in both years.

18. Figure 4 shows the contribution of each GHG to the total emissions without LULUCF for 1990 and 2014 and the changes in the total emissions of each GHG over the period 1990–2014. Emissions of CO_2, CH_4 and N_2O decreased, while emissions of HFCs, PFCs, SF_6, MIX and NF_3 taken together increased by 40.3 per cent.

Figure 4
Greenhouse gas emissions excluding land use, land-use change and forestry of Annex I Parties by gas, 1990 and 2014



Abbreviation: LULUCF = land use, land-use change and forestry.

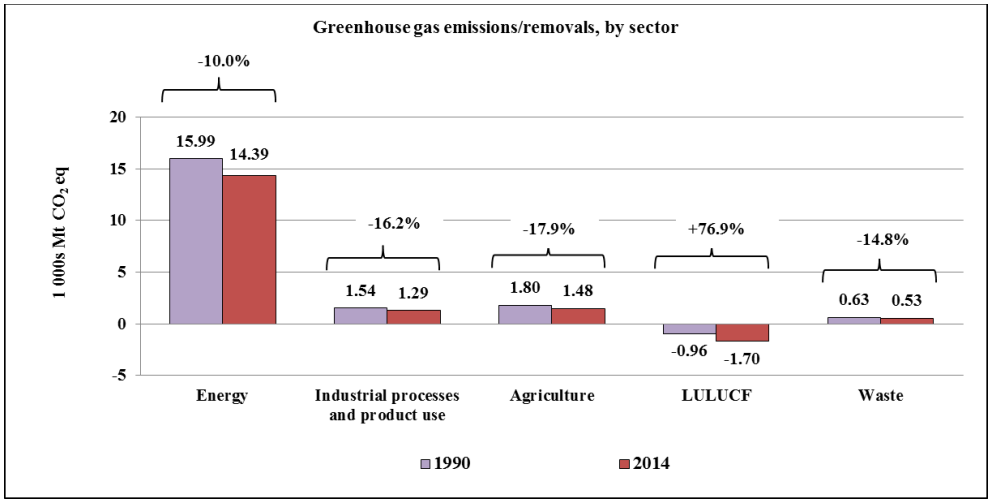
19. Between 2013 and 2014, emissions of CO_2 and CH_4 decreased by 1.4 per cent and 0.3 per cent, respectively. During the same period, emissions of N_2O increased by 0.1 per cent and emissions of HFCs, PFCs, SF_6, MIX and NF_3 taken together increased by 2.9 per cent.

C. Greenhouse gas emissions by sector

20. From 1990 to 2014, emissions from the energy, industrial processes and product use, agriculture and waste sectors decreased (see figure 5). The agriculture sector experienced the largest relative decrease in emissions (by 17.9 per cent), followed by the industrial processes and product use, waste and energy sectors. Over the same period, net GHG removals from LULUCF increased by 76.9 per cent, from –960.69 Mt CO_2 eq to –1,699.85 Mt CO_2 eq.

21. Between 2013 and 2014, emissions from the energy sector decreased by 1.4 per cent. Emissions from the industrial processes and product use, agriculture and waste sectors increased by 0.6 per cent, 0.3 per cent and 0.3 per cent, respectively. Net GHG removals from LULUCF decreased by 7.3 per cent.

Figure 5
Greenhouse gas emissions and removals of Annex I Parties by sector, 1990 and 2014[a]

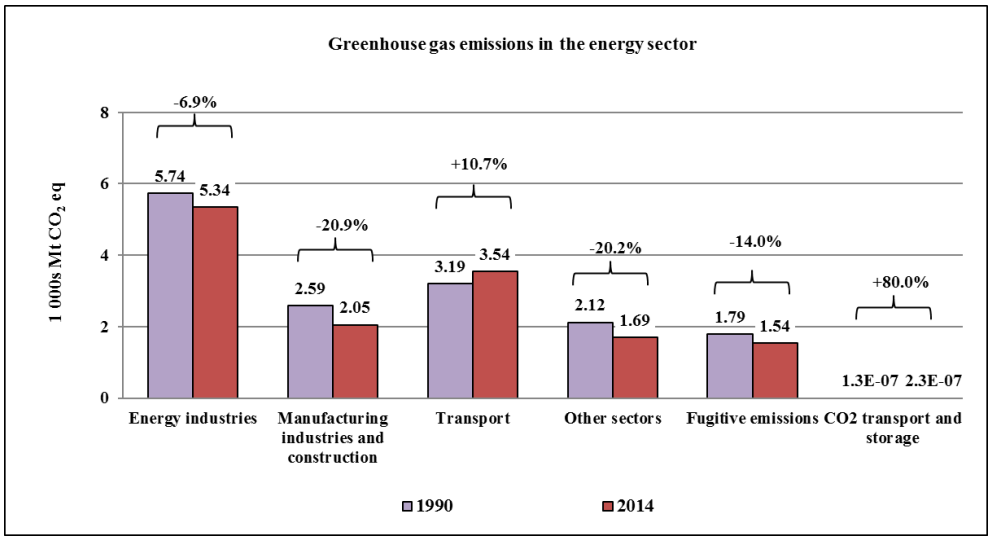


Abbreviation: LULUCF = land use, land-use change and forestry.

[a] The sector other is not included in this figure because its contribution to the total GHG emissions is very small. The emissions from this sector decreased by 27.2 per cent between 1990 and 2014.

22. Within the energy sector, from 1990 to 2014, GHG emissions decreased in all subsectors except transport and CO_2 transport and storage, where emissions increased by 10.7 per cent and 80.0 per cent, respectively (see figure 6). The largest relative emission reduction occurred in manufacturing industries and construction (where emissions decreased by 20.9 per cent).

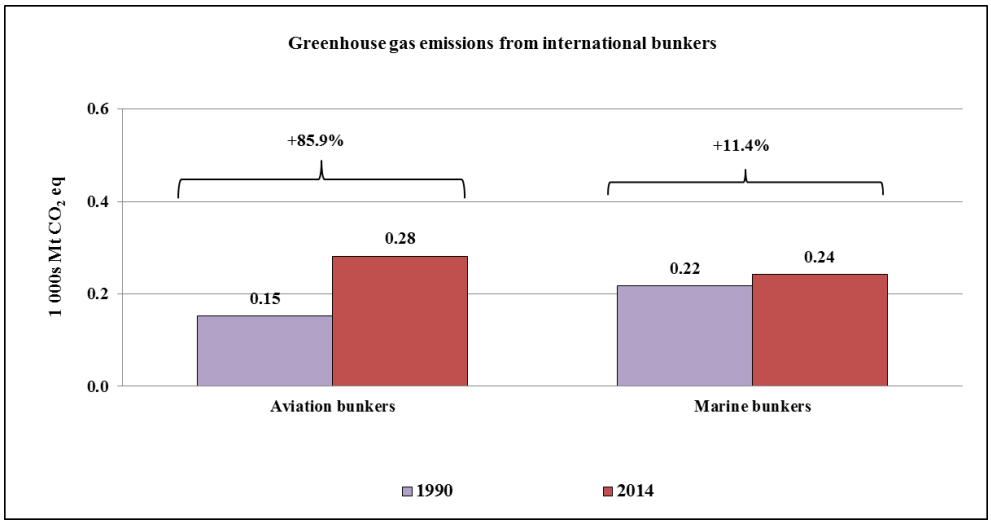
Figure 6
Greenhouse gas emissions of Annex I Parties in the energy sector, 1990 and 2014



23. Between 2013 and 2014, emissions from all energy subsectors, except CO_2 transport and storage (namely energy industries, manufacturing industries and construction, transport, fugitive emissions and other sectors) decreased.

24. Over the period 1990–2014, emissions from international bunkers increased, by 85.9 per cent for aviation and by 11.4 per cent for navigation (see figure 7).

Figure 7
Greenhouse gas emissions from international bunker fuels for Annex I Parties, 1990 and 2014



25. Between 2013 and 2014, emissions from international bunkers increased, by 2.9 per cent for aviation and by 3.9 per cent for navigation.

D. Emission data for individual Annex I Parties

26. Tables 3–15 show detailed GHG data for individual Annex I Parties. Total aggregate GHG emissions without and with emissions and removals from LULUCF are provided in tables 3 and 4; emissions of CO_2, CH_4 and N_2O (without and with emissions and removals from LULUCF) are provided in tables 5–10; emissions of HFCs, PFCs, SF_6, MIX and NF_3 taken together are provided in table 11; emissions and removals from LULUCF are provided in tables 12–14; and indirect CO_2 emissions are provided in table 15.

27. Blank cells in the tables denote that either data were not available or notation keys, such as “NO” (not occurring), “NE” (not estimated), “NA” (not applicable), “IE” (included elsewhere) or “C” (confidential), were used to report emission data. Negative values denote removals; positive values denote emissions.

28. The changes in emissions from 1990 to 2014 were calculated using the exact (not rounded) values and may therefore differ from a ratio calculated with the rounded numbers provided in the tables. An en dash (–) signifies a percentage change exceeding 10,000 per cent.

Table 3
Total aggregate anthropogenic emissions of CO_2, CH_4, N_2O, HFCs, PFCs, SF_6, MIX and NF_3 without emissions/removals from land use, land-use change and forestry, 1990, 2000, 2010, 2013 and 2014

Number of Parties showing an increase in emissions by more than 1 per cent:						*13*

[a] A Party with an economy in transition.

[b] Data for the base year defined by decisions 9/CP.2 and 11/CP.4 (Bulgaria (1988), Hungary (average of 1985–1987), Poland (1988), Romania (1989) and Slovenia (1986)) are used for this Party instead of 1990 data.

[c] Emission estimates of the European Union are as reported for its 28 member States and are reported separately from those of each individual member State.

[d] Decision 26/CP.7 invited Parties to recognize the special circumstances of Turkey, which place it in a situation different from that of other Parties included in Annex I to the Convention.

Table 4

Total aggregate anthropogenic emissions of CO_2, CH_4, N_2O, HFCs, PFCs, SF_6, MIX and NF_3 with emissions/removals from land use, land-use change and forestry, 1990, 2000, 2010, 2013 and 2014

[a] A Party with an economy in transition.

[b] Data for the base year defined by decisions 9/CP.2 and 11/CP.4 (Bulgaria (1988), Hungary (average of 1985–1987), Poland (1988), Romania (1989) and Slovenia (1986)) are used for this Party instead of 1990 data.

[c] Emission estimates of the European Union are as reported for its 28 member States as a group and are reported separately from those of each individual member State.

[d] Decision 26/CP.7 invited Parties to recognize the special circumstances of Turkey, which place it in a situation different from that of other Parties included in Annex I to the Convention.

[a] A Party with an economy in transition.

[b] Data for the base year defined by decisions 9/CP.2 and 11/CP.4 (Bulgaria (1988), Hungary (average of 1985–1987), Poland (1988), Romania (1989) and Slovenia (1986)) are used for this Party instead of 1990 data.

[c] Emission estimates of the European Union are as reported for its 28 member States as a group and are reported separately from those of each individual member State.

[d] Decision 26/CP.7 invited Parties to recognize the special circumstances of Turkey, which place it in a situation different from that of other Parties included in Annex I to the Convention.

[a] A Party with an economy in transition.

[b] Data for the base year defined by decisions 9/CP.2 and 11/CP.4 (Bulgaria (1988), Hungary (average of 1985–1987), Poland (1988), Romania (1989) and Slovenia (1986)) are used for this Party instead of 1990 data.

[c] Emission estimates of the European Union are as reported for its 28 member States as a group and are reported separately from those of each individual member State.

[d] Decision 26/CP.7 invited Parties to recognize the special circumstances of Turkey, which place it in a situation different from that of other Parties included in Annex I to the Convention.

Number of Parties showing a decrease in emissions by more than 1 per cent:						*10*
Number of Parties showing a change in emissions within 1 per cent:						*0*
Number of Parties showing an increase in emissions by more than 1 per cent:						*1*

[a] A Party with an economy in transition.

[b] Data for the base year defined by decisions 9/CP.2 and 11/CP.4 (Bulgaria (1988), Hungary (average of 1985–1987), Poland (1988), Romania (1989) and Slovenia (1986)) are used for this Party instead of 1990 data.

[c] Emission estimates of the European Union are as reported for its 28 member States as a group and are reported separately from those of each individual member State.

[d] Decision 26/CP.7 invited Parties to recognize the special circumstances of Turkey, which place it in a situation different from that of other Parties included in Annex I to the Convention.
