

Debundling check of a SSC project activity

Debundled component if all the 4 are satisfied:

- With the same project participants;
- In the same project category and technology/measure;
 - EB 30 excluded type I project activities providing energy to the same user from using this condition. Does this apply if one of the components is type I project activity (e.g. methane combustion (type III) for electricity which is type I)
- Registered within the previous 2 years
- Whose project boundary is within 1 km of the project boundary of the proposed small- scale activity at the closest point.

Debundling guidance

For the purpose of this guidance a project activity with a primary Type III or Type II component and a secondary Type I component is not considered a Type I project activity (e.g. a project activity that captures methane from the wastewater treatment plant and uses it for electricity or heat generation; majority of the reductions would occur in the former or the primary component while the reduction on account of energy generation or the secondary component would have a minor contribution).
