conceptual note - enabling environments

All Parties [shall][should][other] enhance/improve their enabling environment and policy frameworks, with respect for countries' national prerogative to choose their domestic climate policies, to facilitate mobilisation and effective deployment of climate finance. All Parties [shall][should][other] climate proof investments, in particular all relevant international public investment. Some Parties may need support to enhance/improve their enabling environment.

rationale:

We think enabling environments are crucial for achieving our objective of transformation to low emission, climate resilient economies and societies, and that all Parties can make efforts in this regard. The tool does not capture this in part 1, while language in part three is too complex. Therefore, reflecting on the exchange of Parties on this topic, we put forward this paragraph as a potential bridging idea. This is not a formal language proposal but rather an attempt at capturing a concept. As such, we may come back for further engagement on language.
