

CDKN Approaches to capacity development

Climate & Development
Knowledge Network

- Capability development and not short term training events – examples from Ethiopia and the Global Water Partnership
- University curricula development and research programmes
 - support world-leading research to enhance scientific understanding and prediction of extreme weather and climate in sub-Saharan Africa,
 - Early Career is a critical point in academic development (Masters/PhD/post-doc); working with African stakeholders, bring this science into use in informing adaptation to climate change
 - Decision-makers and researchers have increased awareness of climate risks and vulnerabilities and are integrating climate risks into their plans, policies and investments
- Capacity development, strengthening and mobilisation
