How have countries used gender data to develop their NAPs/NDCs/etc.?

no

Is not inclusive . No disagretated data gender data

Bangladesh

Lebanon: stronger linkages between climate work and DRR based on gender work to prioritize adaptation and resilience for vulnerable groups

gender data were used in Technology Need Ass reports
Ukraine

No gender data

Iran, No gender data

There is no enough Gender data on the impact of climate changes on women

no data yet

How have countries used gender data to develop their NAPs/NDCs/etc.?

yes Jordan we depend on gender data in formulating CC policies and strategies, NAP, NDC's, ..etc as the stronger relations between gender and national responses to CC gender is one of the main element in responding to CC adaptation & mitigation

Palestine. Defined identified four broad areas in which women in palestine face specific challenges 1gender inequalities and gaps in laws regulations and policies, harmful traditional norms,the oppression of israeli occupation poor representation

Statistics survey community level Bangladesh including indigenous peoples and indigenous women's

To develop various community-based projects, for example in the implementation of integrated water resources management, gender-based data are widely used.

What specific data and knowledge resources are available and could support countries in defining their NAP/NDC/etc.? (e.g. census, studies, etc.)

Survey with statistics at national level

SDG 5 linkages with other SDGs, along with SDG13, which would be of help in climate-relevant policies

Inventories on existant data and fill the gaps of data related to the issue of CC

census education professions owners of land health
statistic Ukraine

Palestine; Provide information on rationale mainstraeming gender into climate chang,strengthen stakeholder understanding of gender analysis,provide guidance and capacity building

sex disaggregated data on access to resources

gender analyses

Urgency needs survey statistic at local and national level

Statistics survey at community level including indigenous peoples and indigenous women's in Bangladesh

What specific data and knowledge resources are available and could support countries in defining their NAP/NDC/etc.? (e.g. census, studies, etc.)

National Institution for Statistics should be reinforced as it is the best for data

Improving capacity building

institutional arrangements at local level enables meaningful participation

Readiness programmes can be an enabler of gender mainstreaming

What were your top take aways?

Institutional arrangements need to facilitate sustained collaboration among gender and climate actors

Its important to include various levels of stakeholders in these arrangements

Policies

instituional arrangements at local level enable menaingful participation

What were your top take aways?
