

Best Practices For Science Communication

An Early Career Researcher Perspective

Fiona Tummon, Jo-Ting Huang-Lachmann, Vera Schemann

Why?

Science Communication

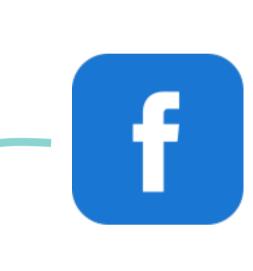

How?

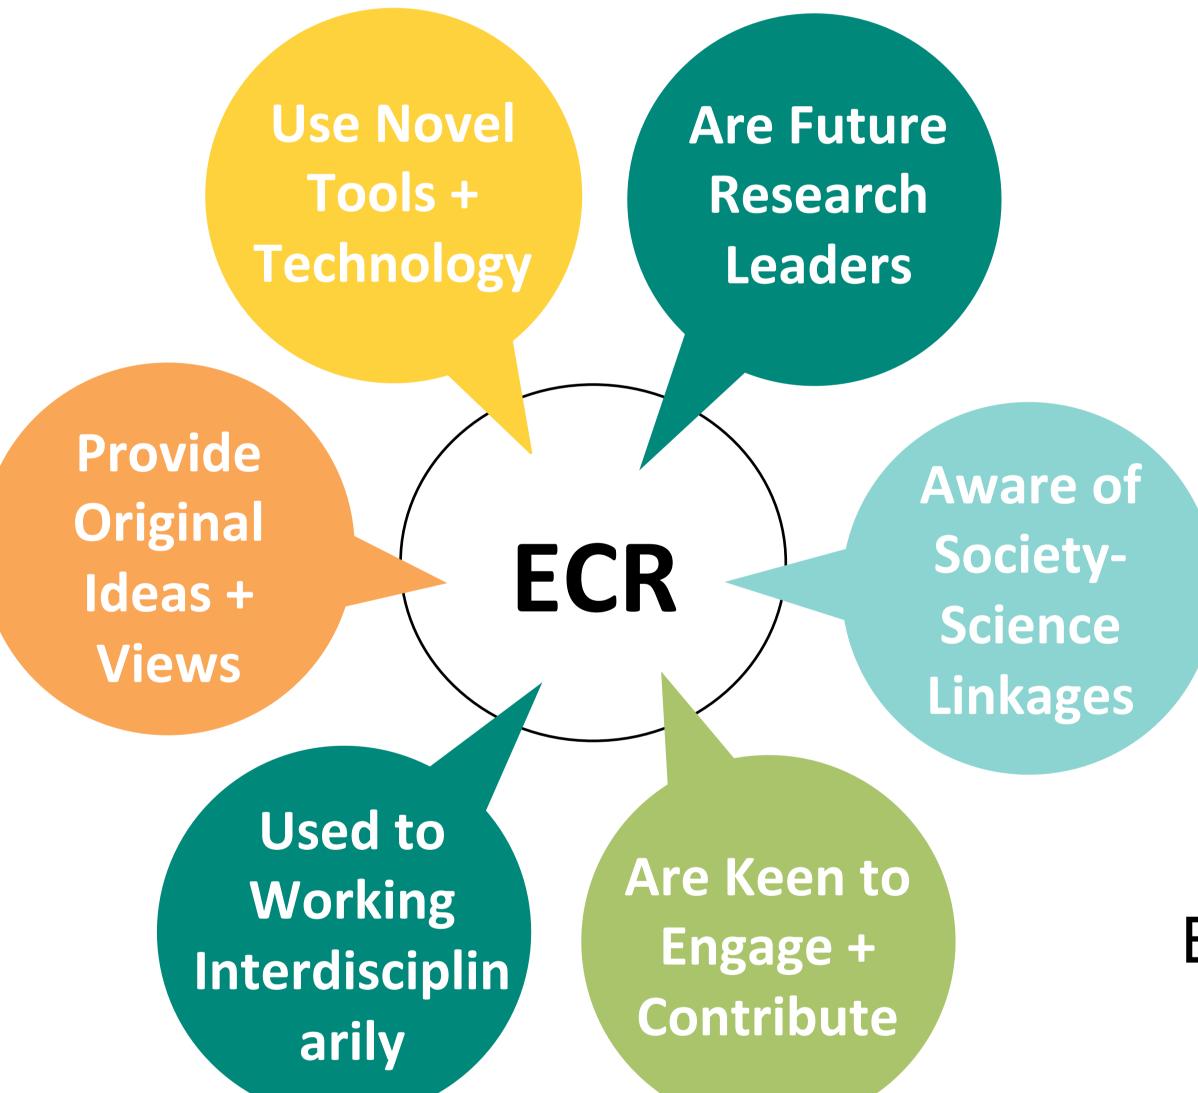

Consider how people receive information

Engaging with with social scientists can help with understanding your audience and how their personal beliefs or values affect how they interpret information

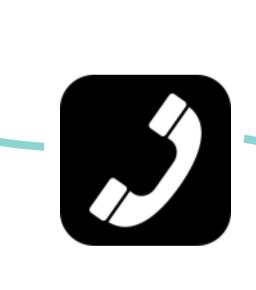

Why?

Involve Early Career Researchers

Make your message accessible

Tailor-made messages for different media channels, including social media, can help engage wider audiences, particularly those not traditionally reached

Empower your audience to be part of the discussion from the beginning

Encouraging an honest, bi-directional dialogue can benefit all – producing more user-oriented science and more informed decision making

Recommendations + Benefits

Facilitate opportunities for ECRs to contribute to research and communication activities

Science communication should be an integral part of any scientific education

Early Career Networks can bring new perspectives and help recruit the next generation of leaders

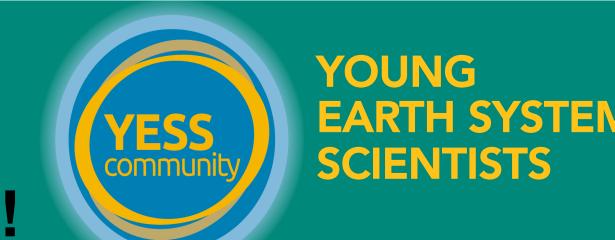

Assess the effectiveness of your communication

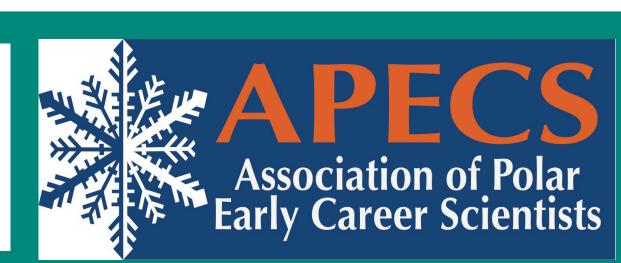

Working with science communication experts can help improve skills and techniques

ECRs have the energy, passion, and skills to actively contribute and steer CLIMATE RESEARCH in a truly interdisciplinary direction!

- Facilitate opportunities for ECRs to contribute to research and communication activities
- -Science communication should be an integral part of any scientific education
- -Early Career Networks can bring new perspectives and help recruit the next generation of leaders
