

SODA Standard

Real outcomes, proven first, claimed once, and easy to verify.

- **Ex-post issuance.** Units are minted only **after** the outcome has happened and an independent verifier has signed off. No forward promises, fewer headaches.
- **Litigation-Ready evidence (LRPDS).** Every unit carries a complete, auditable dossier—method, data, calculations, verifier opinion, and notices—so claims hold up under scrutiny.
- **Single-claim registry.** Once a unit backs a public claim, it's locked to that claim to prevent re-use. Traceable, transparent, done.
- **Verification that auditors recognise.** Independent verification follows ISO 14064-3 style requirements—clear criteria, evidence, and an opinion you can reference.
- **Disclosure-ready.** Designed to slot into climate and transition-plan reporting (AASB/IFRS S2 and TPT-style structure) with clean “residuals-only” use.
- **Claims that pass the pub test.** Guidance aligns with the ACCC’s eight principles for trustworthy environmental claims.
- **SODA Classes**
Action lands better when it's specific.
SODS has established SODA Classes to channel effort and capital toward a critical Earth system we all rely on—climate, nature, water, land, and nutrients—using **one-year, independently-verified outcomes** that are easy to compare and claim. That's the SODA way: *prove first, claim once, keep it simple.*
