Integrating Action for Climate Empowerment into climate change policies including Nationally Determined Contribution

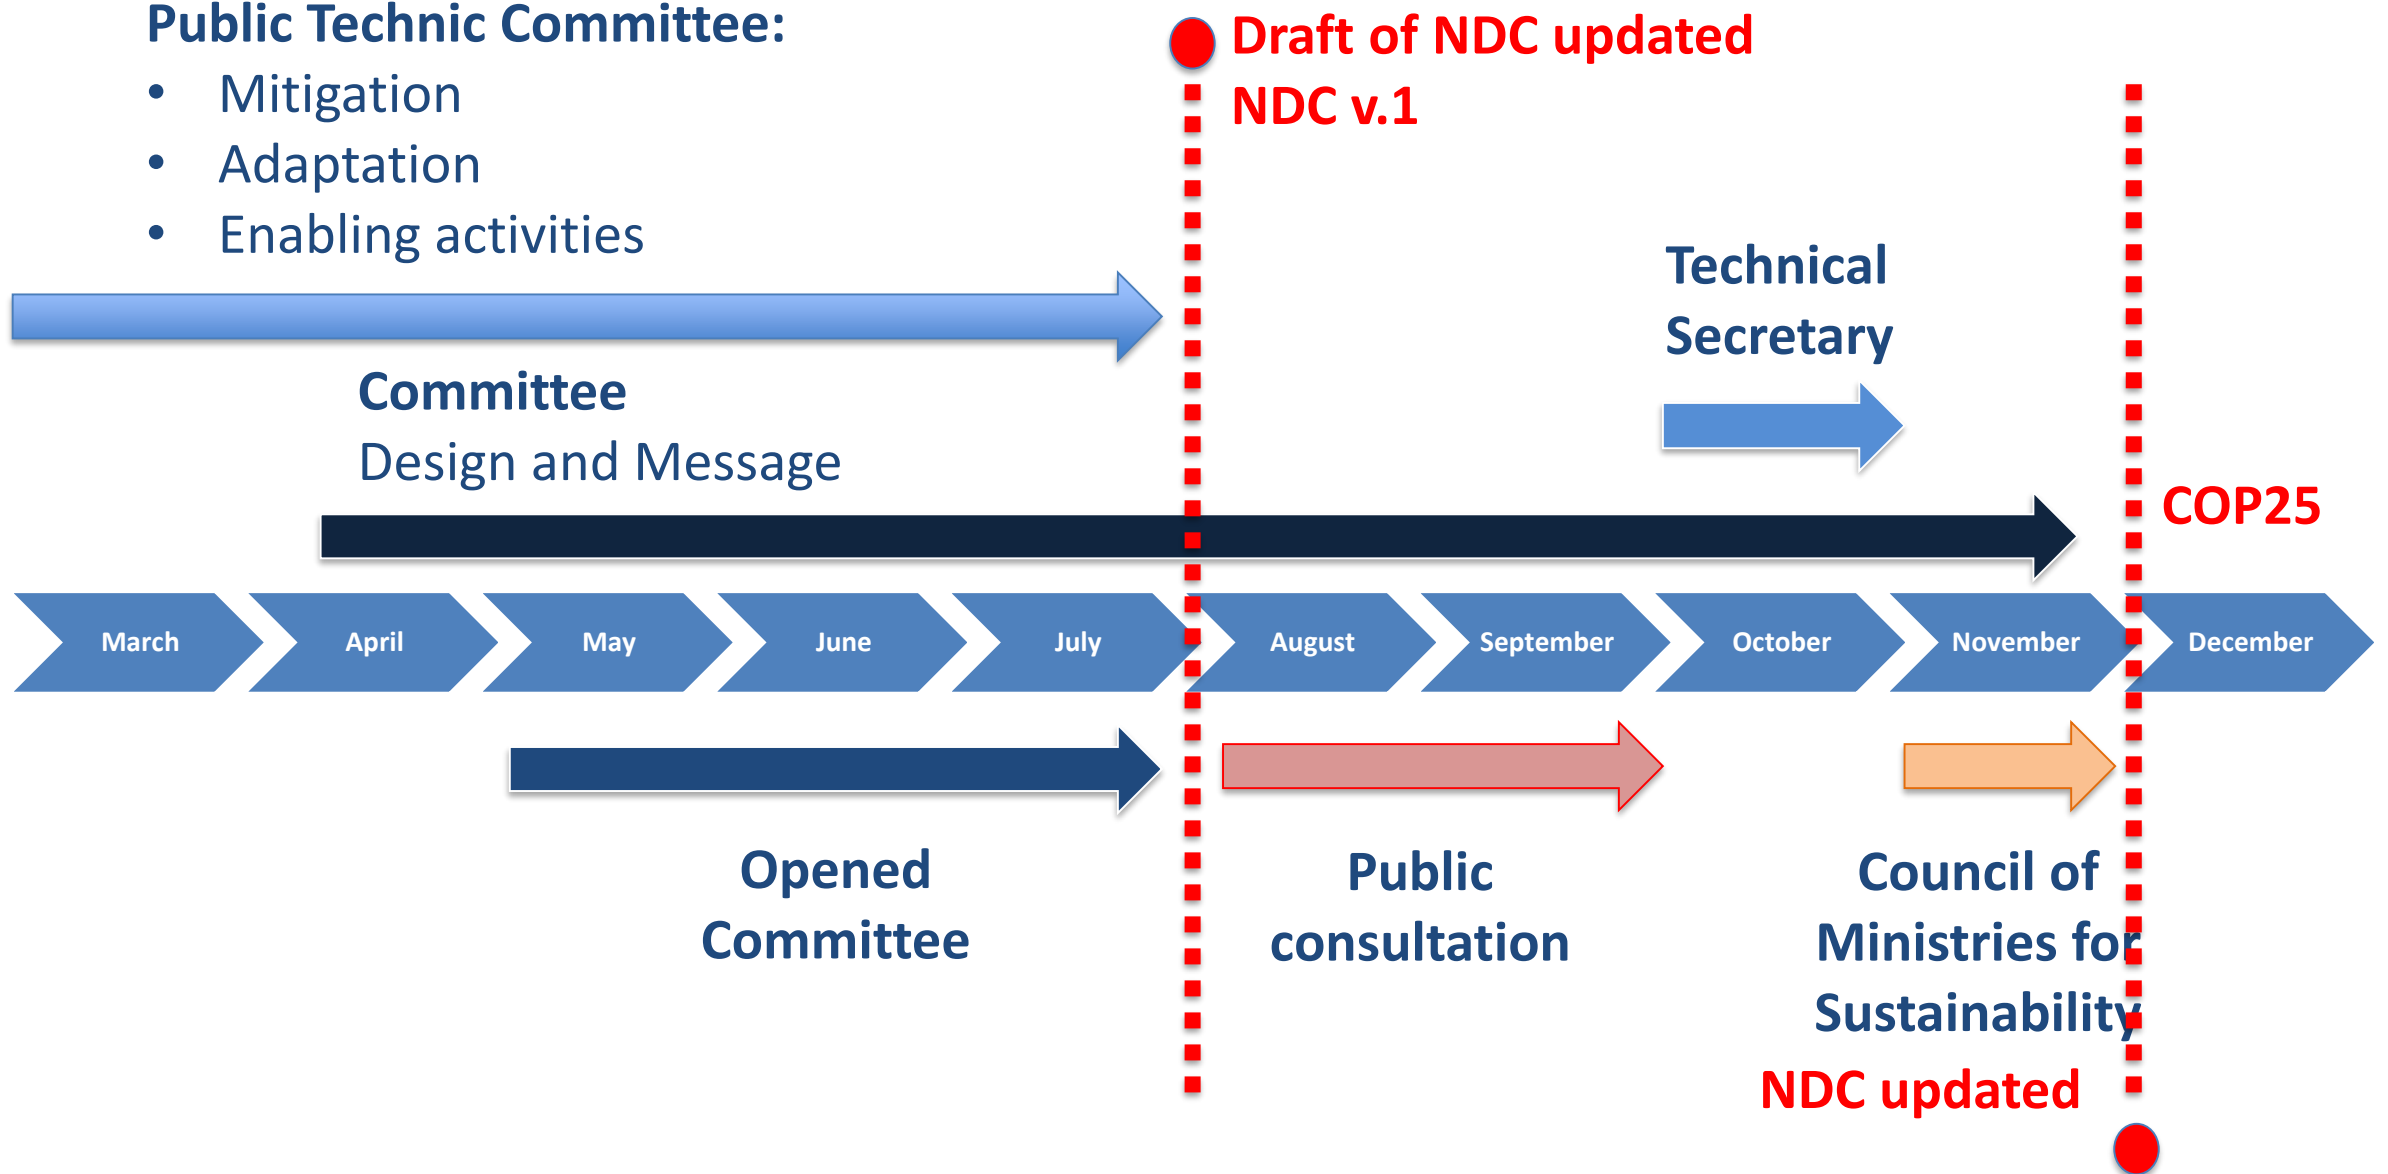

7th Dialogue on Action for Climate Empowerment

Chile's NDC update process

Public Technic Committee:

- Mitigation
- Adaptation
- Enabling activities

Climate Change Policies

Climate Change Framework Law (in elaboration)

Long Term Climate Strategy (in elaboration)

National Determined Contribution (NDC)

National Action Plan of Climate Change (2017-2022)

National Adaptation Plan (2014) and sectoral plans

- Agriculture (2013)
- Biodiversity (2014)
- Fishing and aquaculture (2015)
- Health (2016)
- Mitigation and adaptation plan for infrastructure services (2017)
- Cities (2018)
- Energy (2019)
- Tourism (in elaboration)
- Water (in elaboration)

Sectoral mitigation plans

Mitigation Plan of Energy (2017)
Strategy of climate change and vegetative resources
Electromobility strategy
Plan of mitigation and adaptation for infrastructure services

Action for Climate
Empowerment

Climate change policies

8) Tourism	ED
9) Water	ED

Chile's NDC update process

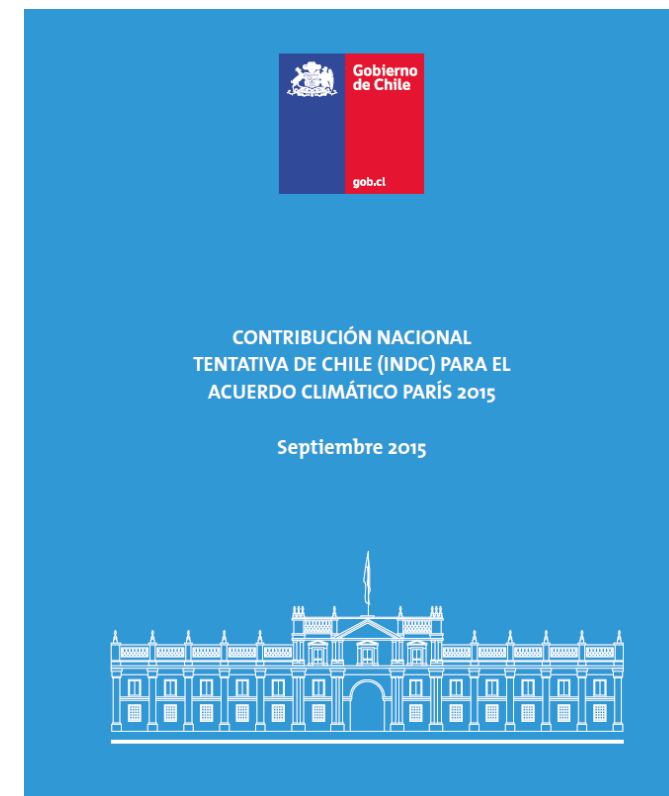

Technical Committee: Ministry Economy, Sciences, Environment, Agency of Sustainability and Climate Change, Corporation for the Promotion of Production

Technical Committee: Ministry Education, Sciences, Environment

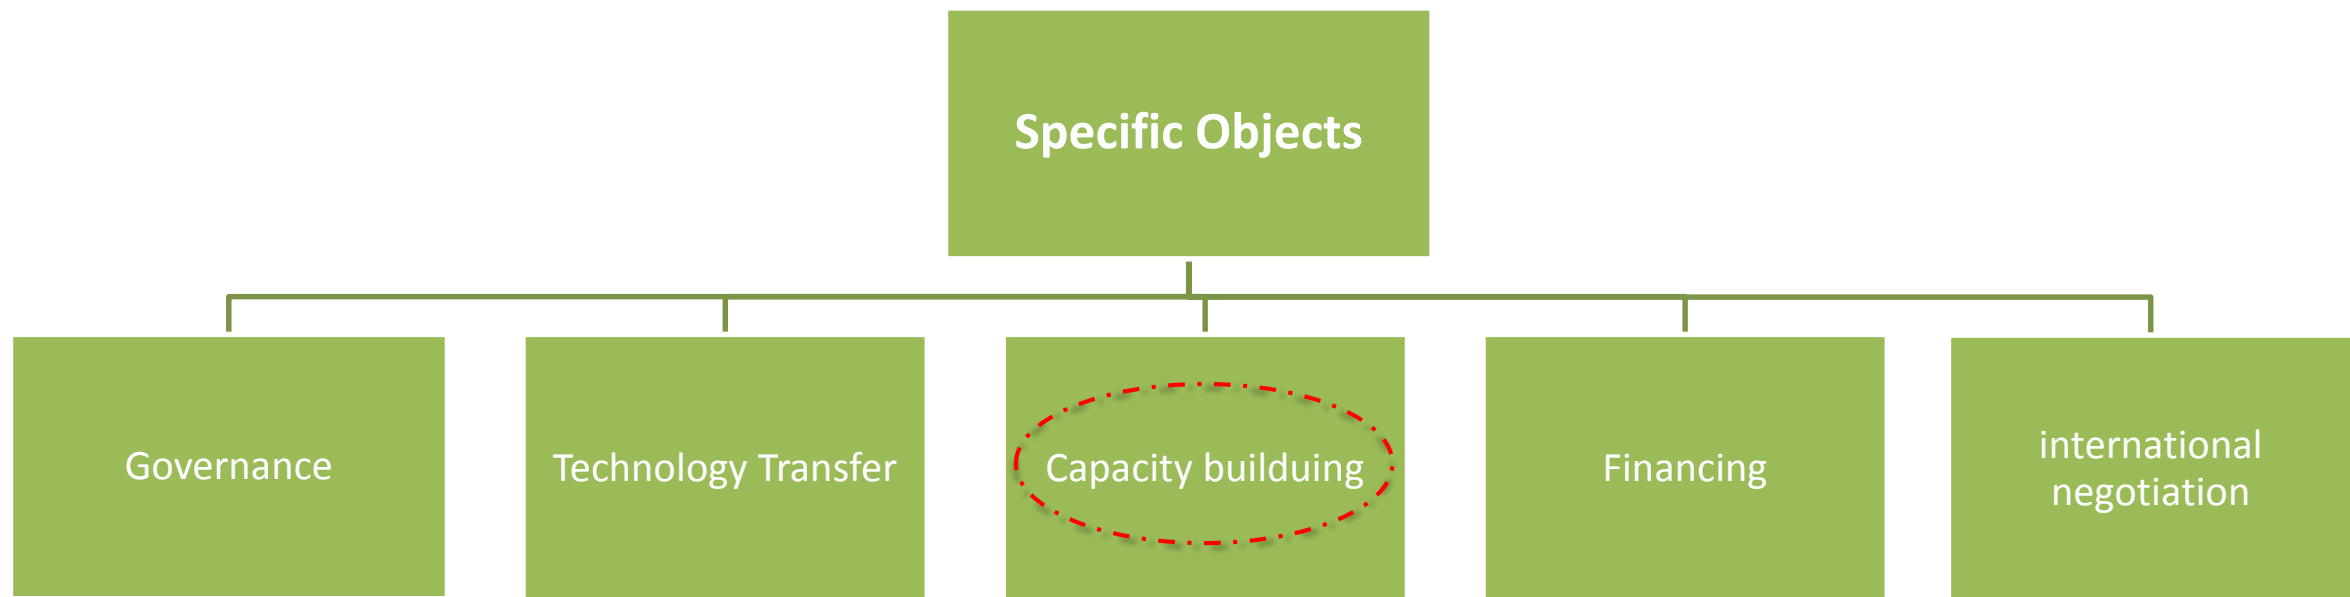

Contribution to Paris Agreement in development and capacity strengthening (2015)

- **4.2.1 Elaboration of projection models that Chile can share and spread nationally and internationally**, with both individual and joint efforts with other countries available.
- **4.2.2 Seminars carried out jointly along with those countries willing to provide support for training and capacity building for countries that require it** in the preparation and communication of its intended national contributions, emission inventories of greenhouse gases, national communications, biennial update reports and Nationally Appropriate Mitigation Actions (NAMAs).
- **4.2.3 The development of instruments to promote research and capacity building at national and sub-national level**, strengthening the response capacity of communities and local governments, in order to strengthen national adaptive capacity, through institutional development and strengthening the capacities of those groups and sectors of the country that are most vulnerable to the impacts of climate change.

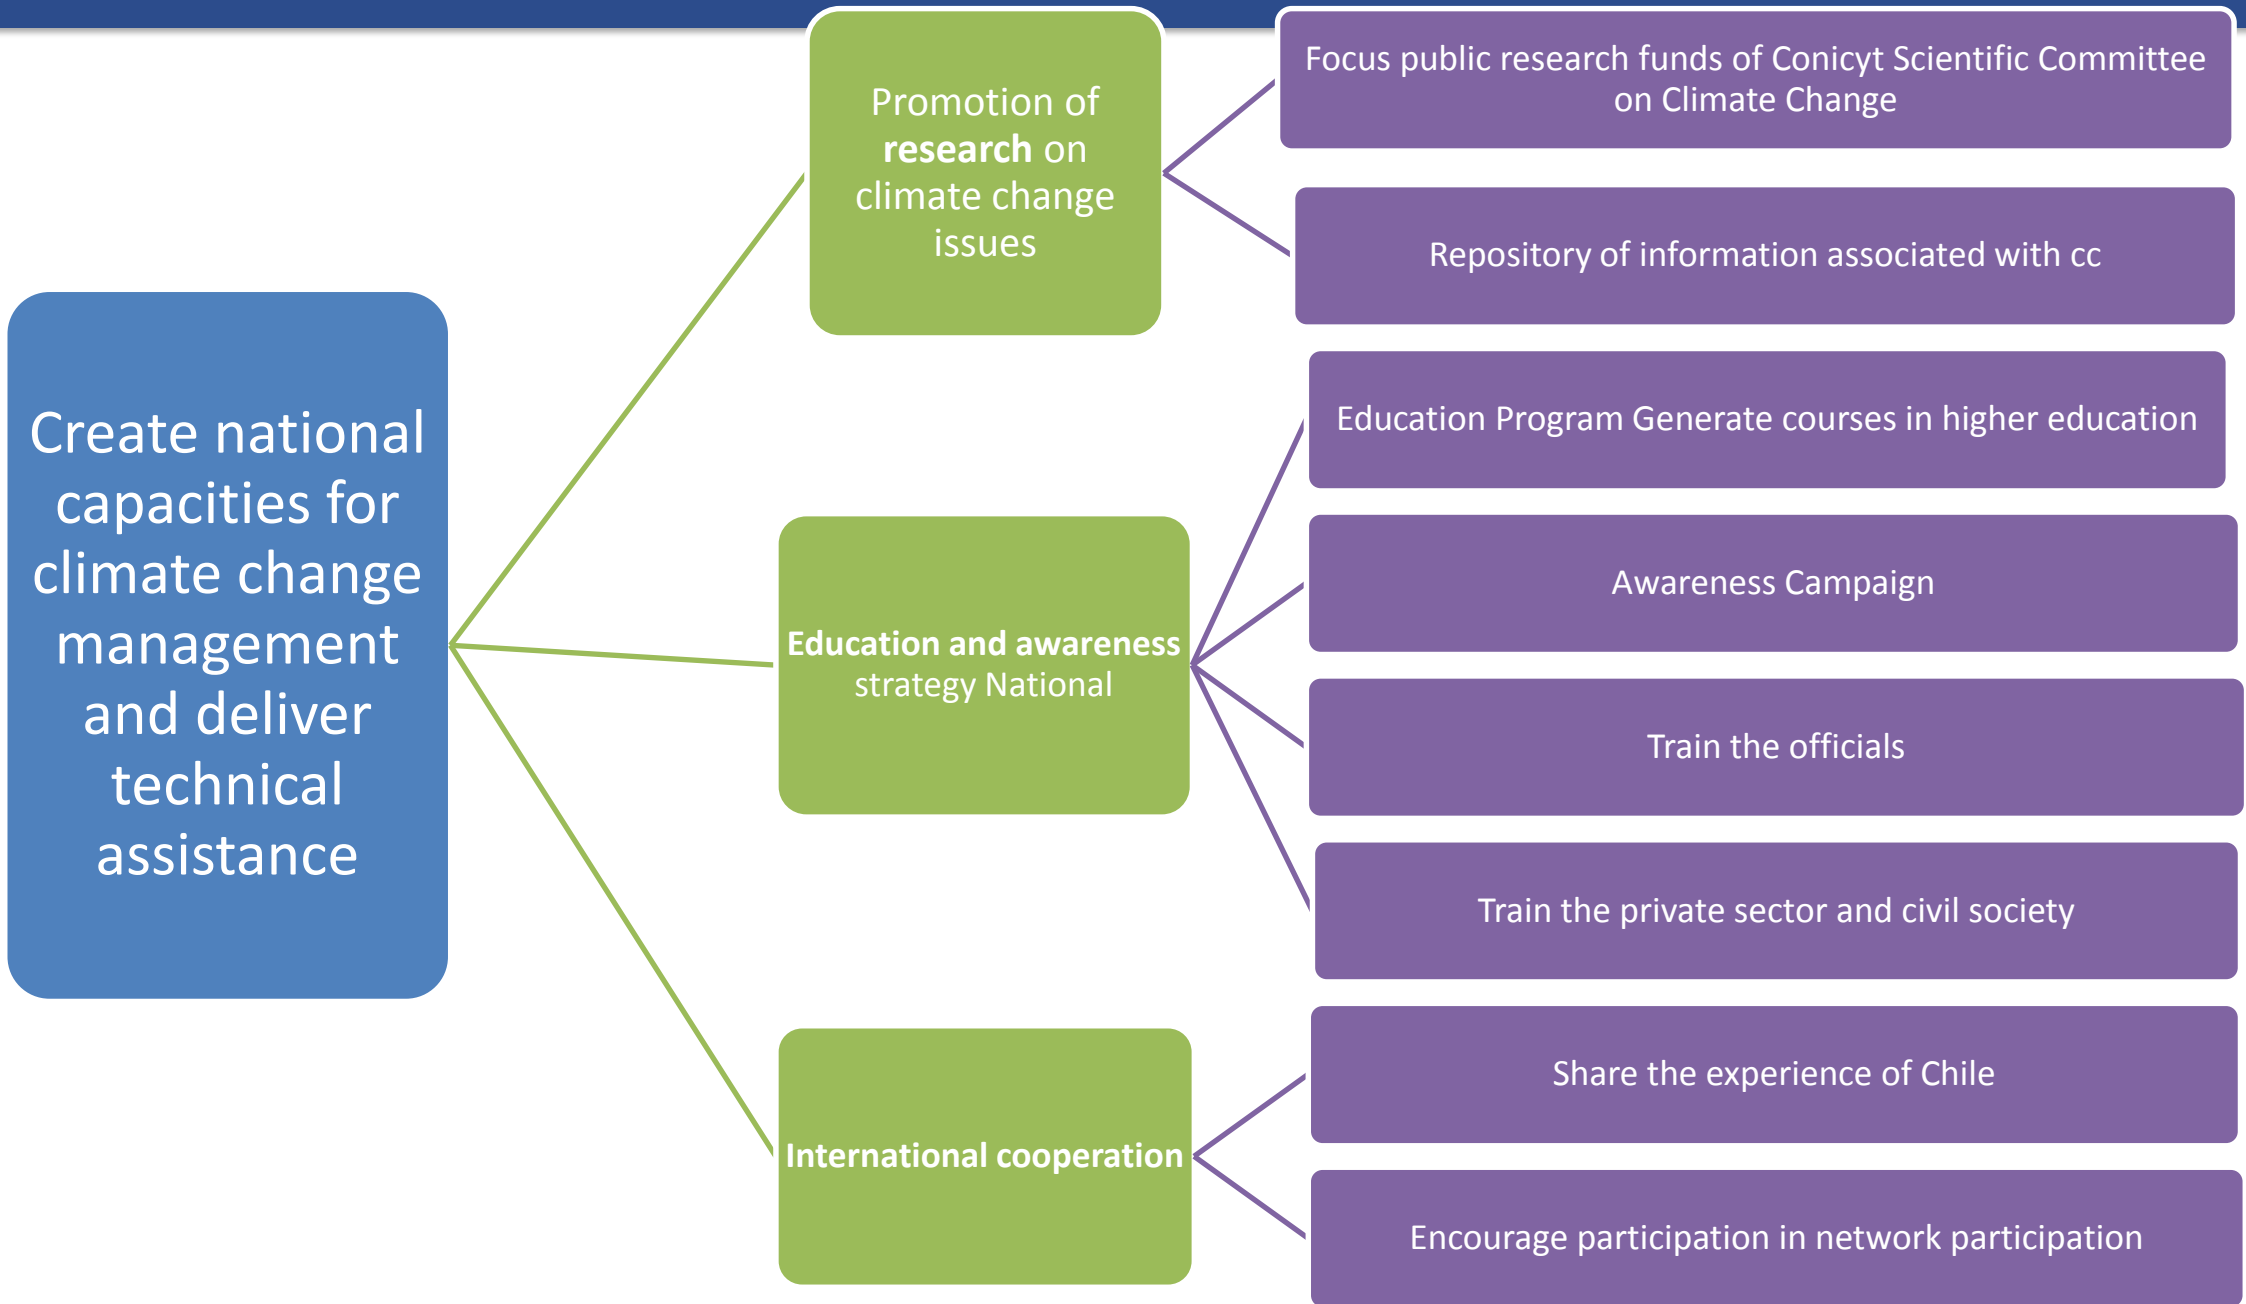

How does Chile implement NDC?

The **National Action Plan of Climate Change (PANCC)** includes a chapter of “means of implementation”, its object is **to implement transversal elements** that complement measures proposed in the Mitigation, Adaptation and Territorial actions related to institutional strengthening, **technology transfer, capacity building and technical assistance**, financing and international negotiation.

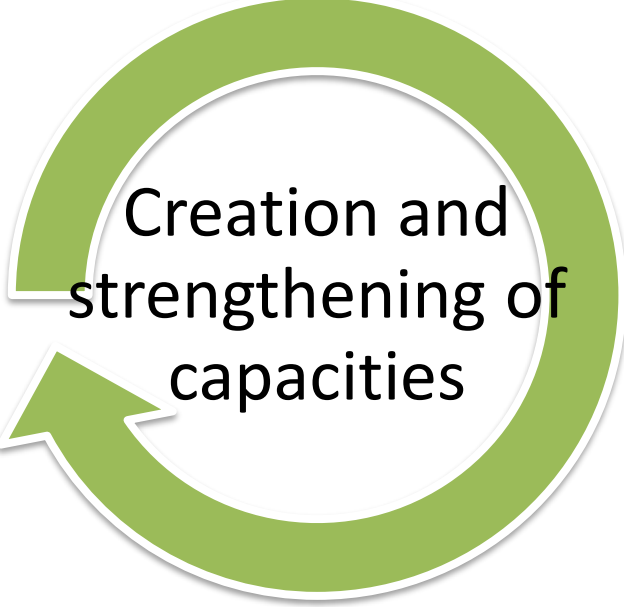

Capacity building (PANCC 2017-2022)

Development and capacity strengthening proposal under NDC

- Research on climate change
- Education and sensitization of citizens to address climate change
- Creation and strengthening of national, regional and local capacities for climate change management
- Promoting the exchange of experiences at the national and regional level on mitigation and adaptation measures to climate change at the local level

Considers 6 pillar of ACE: education, training, public awareness, public access to information, public participation, international cooperation

Creation and strengthening of capacities

Good practices

Education

Integration in formal education (secondary school)

Elaboration of material (Expert based)

Training

Online courses by Adriana Hoffman Academy

Actions in sectorial plans (Different national institutions)

Public awareness

Workshops, seminars

Public access to information

Transparency Law.

Public participation

Each policy considers a voluntary public participation process (online formal and workshops)

International cooperation

SNiChile, HuellaChile, Environmental Education.

Lessons Learned

- It is necessary to articulate ACE actions from public, private, academy, civil society sectors, in particular for reports.
- NDC update need to integrate capacity building focused in mitigation and adaptation compromises, considering in its whole process the Action for Climate Empowerment.
- COP25 is a national opportunity to integrate all actions.
