Paragraph 6 of the annotated agenda

AMT-007 Methodological tool: Emissions from electricity generation and consumption

Methodological Expert Panel – 15th meeting

Virtual, 22 and 23 July 2026

- SBM 020: adopted the “Methodological tool: Emissions from electricity generation and consumption” (A6.4-AMT-007);
- SBM 021: requested the MEP to prepare the “Concept note: Revision of methodological standards and tools for application to programmes of activities” and revise any relevant methodological standards and tools to make them applicable to programmes of activities (PoAs).

Purpose

The proposed revision to the Grid Tool is intended to enable the Supervisory Body to approve and operationalize mechanism methodologies referring to this tool, where such methodologies are applicable to Article 6.4 PoAs, including PoAs transitioning from the CDM to the Article 6.4 mechanism.

In the proposed revision, the applicability statement is revised to read:

“This version of the methodological tool is applicable to proposed mechanism methodologies for Article 6.4 projects and Article 6.4 programmes of activities (Article 6.4 PoAs), jointly referred to as Article 6.4 activities”.

This revision makes the methodological tool applicable to both Article 6.4 projects and Article 6.4 PoAs. References to relevant rules pertaining to PoAs are also included, where applicable, together with other editorial revisions.

In addition, where the term “PDD” is used, it has either been retained (where it refers only to an Article 6.4 project) or expanded, as appropriate, to include “PoA-DD” and “CP-DD”. Other editorial revisions were also made, such as replacing the term “project” with “activity” where it refers to an Article 6.4 activity. In other contexts, the term “project” was retained where appropriate.

Expected outcome

- To publish the methodological tool for call for public inputs;
- Inputs on the draft methodological tool will be considered at MEP.
